

Contents

Preface

v

1. Main Group Elements: General Characteristic Features 1-13

1. Introduction 7
 - 1.1. Various Systems of Nomenclature for Divergent Types of Element 7
2. General Characteristics Features of the Main Group Elements 4
 - 2.1. Metallic Character Profile 4
 - 2.2. Polarization Strength and Polarizability 5
 - 2.3. The Oxidation States (Oxidation Numbers) 7
 - 2.4. Diagonal Relationship 11

Suggested Readings 13

Review Questions 13

2. General Characteristic Features of Group 1 (1A) Elements: Alkali Metals 14-52

1. Introduction 14
2. Position of Alkali Metals in the Periodic Table 15
 - 2.1. Electronic Configurations 16
 - 2.2. Similarities in Physical Properties and Gradation in Them 16
 - 2.3. Similarities in Chemical Properties and Gradation in Them 26
 - 2.3.1. Halides 26
 - 2.3.2. Oxides and Hydroxides 30
 - 2.3.2.1. Preparation of Oxides 30
 - 2.3.2.2. Preparation of Hydroxides 32
 - 2.3.2.3. Salts of Oxo-Acids 33
 - 2.3.2.4. Aqueous Solution Chemistry 35
 - 2.3.2.5. Complexes 35
 - 2.3.2.6. Organometallic Compounds 37

Suggested Readings 40

Problems with Solutions 40

University Questions 49

Probable Questions 51

3. General Characteristic Features of Group 2 (IIA): Alkaline Earth Metals 53-94

1. Introduction 53
2. Position of the Alkaline Earth Metals in the Periodic Table 55
 - 2.1. Electronic Configurations 55
 - 2.2. Physical Characteristic Similarities and Their Gradation Profiles 56

- 2.3. Similarities in Chemical Characteristics and Gradation Amongst Them 67
 - 2.3.1. Formation of Oxides 67
 - 2.3.2. Formation of Hydroxides 63
 - 2.3.3. Formation of Metal Hydrides (MH₂) 65
 - 2.3.4. Formation of Metal Carbonates (MCO₃) 66
 - 2.3.5. Formation of Metal Nitrides (M₃N₂) 66
 - 2.3.6. Formation of Metal Carbides (MC₂) 67
 - 2.3.7. Complex Formations (Complexation) 67
 - 2.3.8. Solubility Profiles of Sulphates and Chromates 68
- 2.4. Inconsistent Behavioural Pattern of Beryllium (Be): Observed Dis-similarities with Other Alkaline Earth Metals (*viz.* Mg, Ca, Sr, Ba, Ra) 68
- 2.5. Comparing Beryllium (Be) and Magnesium (Mg) *vis-a-vis* Other Earth Metals (*viz.*, Ca, Sr, and Ba) 70
- 2.6. Diagonal Relationship Exists between Be and Al: Similarities Observed between Be and Al 71
- 2.7. Equivalence (Comparison) between Alkaline Earth Metals (*viz.* Be, Mg, Ca, Sr, Ba, and Ra) with Alkali Metals (*viz.*, Li, Na, K, Rb, and Cs) 76
- 2.8. Magnesium (Mg) Serves as the Specific 'Bridge Element' Occuring between Groups: 2 (IIA) and 2 (IIB) Elements 77

Further Reading References 81

Problems with Solutions 81

University Questions 91

Probable Questions 93

4. General Characteristic Features of Group 13 (IIIA) Elements: Boron Group Elements

95-137

- 1. Introduction 95
 - 1.1. Electronic Configurations 96
 - 1.2. Similarities in Physical Characteristics and Proper Gradation Therein 96
 - 1.3. Similarities in Chemical Characteristics and Proper Gradation Therein 100
 - 1.3.1. Critical Formation of Oxides and Hydroxides 101
 - 1.3.2. Trihalides Formation 102
 - 1.3.3. Hydrides Formation 105
- 2. Extraction of Elements of Group 13 (IIIA) 106
 - 2.1. Extraction of Elements 106
 - 2.2. Characteristic Features of Elements of Group 13 (IIIA) 108
 - 2.2.1. Characteristics of Boron (B) 108
 - 2.2.2. Characteristics of Aluminium (Al) 109
 - 2.2.3. Characteristics of Gallium (Ga) 111
 - 2.2.4. Characteristics of Indium (In) 112
 - 2.2.5. Characteristics of Thallium (Tl) 113
- 3. Complexes of Group 13 (IIIA) Elements 113
 - 3.1. The Borides 114
 - 3.2. The Boron Hydrides and Boranes 117
- 4. Interaction with Lithium Ethyl (LiC₂H₅) and Alkali Metal Hydrides (*viz.* Lithium Hydride (LiH) and Sodium Hydride (NaH)) 122
- 5. Interaction with Trimethyl Aluminium (Al(OH₃)₃) 122
- 6. Action of Ignition (or Combustion) of Diborane (B₂H₆) 122
- 7. Interaction with Halogens 122
- 8. Interaction with Halogen Acids (HX) 123
- 9. Interaction with Sodium (Na) or Potassium (K) Amalgam (Na-Hg;K-Hg) 123
- 10. Interaction with Ammonia (NH₃) 123
- 11. Critical Formation of Addition Compounds (or Adducts) 125

Problems with Solutions 129

University Questions 135

Probable Questions 136

5. Chemistry of Group 13 (IIIA) Elements: Important Compounds and Ceramics Industry 138–184

1. Introduction 138
- (A) Boron (B) 138
 1. Boric Acid (H_3BO_3) 138
 2. Sodium Tetraborate (or Borax): $\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$ 142
 3. Borazine (or Borazole) ($\text{B}_3\text{N}_3\text{H}_6$) 144
 4. Boron Nitride (BN) 150
 5. Boron Trihalides (BX_3 (X = F, Cl, Br, I)) 152
 6. Boron Trifluoride (BF_3) 156
 7. Fluoboric Acid (HBF_4) and its Salts 157
- (B) Aluminium (Al) 159
- (C) Various Components of Aluminium 167
- (D) Thallium (Tl) 175
- Problems with Solutions* 178
- University Questions* 183
- Probable Questions* 184

6. Chemistry of Group 14 (IVA) Elements: Carbon Group Elements 185–208

1. Introduction 185
2. Actual Position of Carbon Group Elements in The Periodic Table 185
 - 2.1. Physical Characteristics and Their Gradation 185
 - 2.1.1. Occurrence 186
 - 2.1.2. Allotropy 186
 - 2.1.3. Atomic Volumes 187
 - 2.1.4. Density 187
 - 2.1.5. Atomic and Ionic Radii 187
 - 2.1.6. Metallic and Non-Metallic Characteristics 187
 - 2.1.7. MPs and BPs 187
 - 2.1.8. The Ionization Energies 188
 - 2.1.9. Electronegativity Profile 188
 - 2.1.10. Valency Status 188
 - 2.1.11. The Oxidation States 189
 - 2.1.12. The Nature of M^{2+} and M^{4+} Chemical Entities 190
 - 2.1.13. The sp_3 -Hybridisation vs Equivalency of 4 191
 - 2.1.14. Observed Inherent Tendency of the Elements to Yield Homo-Chains (M-M Chains) (or Self-Linkage or Catenation) 191
 - 2.2. Chemical Characteristics and Their Gradation 192
 - 2.2.1. Formation of Hydrides 192
 - 2.2.2. Formation of Oxides 193
 - 2.2.3. Formation of Halides 193
 - 2.2.4. Formation of Acids 196
 - 2.2.5. Action of Caustic Alkalies 196
 - (A) Specific Differences of Carbon (C) and Silicon (Si) from Other Elements of Group (IVA) 197
 - (B) Critical Comparison between Carbon (C) and Tin (Sn) 198
 - (C) Critical Comparison between Silicon (Si) and Tin (Sn) 201
 - (D) Critical Similarities between Tin (Sn) and Lead (Pb) 202
- Further Reading References* 203
- Problems with Solutions* 203
- University Questions* 207

7. Compounds of Carbon, Silicon, Carbides, and Metallic Carbonyls 209–280

1. Introduction 209
 2. Compounds of Carbon (C) 209
 - 2.1. Percarbonic Acids (H_2CO_4) and Percarbonates (Salts of H_2CO_4 , Na_2CO_4 , K_2CO_4 , BaCO_4) 209
 - 2.1.1. Permonocarbonates 210
 - 2.1.2. Perdicarbonates 211
 - 2.1.3. The Perhydrates of Simple Carbonates 214
 - 2.2. Phosgene (or Carbonyl Chloride) (COCl_2) 214
 - 2.3. Carbon Disulphide (CS_2) 216
 - 2.3.1. Taylor's Electrical Method 216
 - 2.3.2. Zahn's Process 217
 3. Compounds of Silicon (S) 220
 - 3.1. Various Compounds of Silicon (S) 220
 - 3.1.1. Silicic Acids 220
 - 3.1.2. Sodium Silicate (Water Glass (Na_2SiO_3)) 221
 - 3.1.3. Silicon Tetrachloride (SiCl_4) 223
 - 3.1.4. Hydrofluosilicic Acid ($\text{F}_6\text{H}_2\text{Si}$) or Fluosilicic Acid 225
 - 3.2. The Silicones 227
 - 3.2.1. Silicone Rubbers 229
 - 3.2.2. RTV (Room-Temperature Vulcanizing) Silicone Rubbers 230
 - 3.2.3. Silicone Resins 230
 - 3.3. The Silicates 233
 - 3.3.1. Classification/Structure of the Silicates 233
 4. The Carbides 239
 - 4.1. Classification of Carbides 242
 - 4.1.1. Ionic Carbides 243
 - 4.1.2. Interstitial Carbides 245
 - 4.2. Borderline Carbides 247
 - 4.3. Covalent Carbides 247
 - 4.4. Silicon Carbide (SiC) (or Carborundum) 248
 5. Metallic Carbonyls 251
 - 5.1. Substitution Reactions 257
 - 5.2. Formation of Carbonylate Anions (or Anionic Carbonyl Complexes) 258
 - 5.3. Formation of Carbonylate Cations (or Cationic Carbonyl Complexes) 260
 - 5.4. Formation of Metal Carbonyl Halides 260
 - 5.5. Formation of Metal Carbonyl Hydrides 260
- Further Reading References* 274
Problems With Solutions 274
University Questions 279

8. Chemistry of Group 15 (VA) Elements: Nitrogen Group Elements 281–361

1. Introduction 281
 - 1.1. Electronic Configurations 281
 - 1.2. Observed Similarities in Physical Characteristics and Their Proper Articulated Gradation 282
 - 1.2.1. Occurrence 282
 - 1.2.2. Allotropy 283
 - 1.2.3. Physical State and Elemental Structure 283
 - 1.2.4. Atomic Volume (AV) and Atomic Radius (r) 284
 - 1.2.5. Ionization Potentials (IPs) 284
 - 1.2.6. The Metallic and Non-Metallic Character 284
 - 1.2.7. Electronegativity Profile and Heat of Atomization 285

1.2.8.	MPs and BPs of Elements of Group 15 (VA)	285
1.2.9.	Hardness and Density Profile	285
1.2.10.	Some Highly Specific Oxidation States	285
1.2.10.1.	Critical Formation of M^{3+} and M^{5+} Cations	286
1.2.10.2.	Formation of M^{3+} Ions	286
1.2.10.3.	Covalency of 3 and 5	287
1.2.11.	Tendency of Elements for Exhibiting Catenation	287
1.2.12.	Electrical and Thermal Conductivity	288
1.3.	Observed Similarities in Chemical Characteristics and Their Adequate Gradation	288
1.3.1.	Critical Formation of Hydrides (MH_3 ; (M = N, P, As, Sb, Bi); and M_2H_4 ; (M = N, P))	289
1.3.2.	Formation of Halides (Trihalides (MX_3) and Pentahalides (MX_5))	291
1.3.3.	Similarities between Structures of MX_3 Trihalides and Ammonia (NH_3)	292
1.3.4.	N and Bi Unable to Form Pentahalides (MX_5)	292
1.3.5.	Formation of Oxides	293
1.3.6.	Formation of the Oxy-Acids	295
1.3.7.	Critical Combination with Metals	296
2.	Hydrides-Oxides-Oxyacids of Nitrogen	298
2.1.	Hydrides	298
2.1.1.	Characteristic Features of Hydrazine (or Diamine)	299
2.1.2.	Structural Resemblance of Hydrazine to Hydrogen Peroxide (H_2O_2) and its Amino Analogue	302
2.1.3.	Azoimide (HN_3) (or Hydrazoic Acid or Hydrogen Azide)	303
2.1.4.	Characteristic Features of Azoimide (HN_3)	304
2.1.5.	The Structural Configuration of Hydrazoic Acid (HN_3) Molecule and Azide Ion (N_3^- Ion)	306
2.2.	Oxides	307
2.2.1.	Nitrous Oxide (N_2O) (or Dinitrogen Oxide)	308
2.2.2.	Nitric Oxide (NO) (or Nitrogen Monoxide)	310
2.2.3.	Dinitrogen Trioxide (Nitrous Anhydride or Nitrogen Sesquioxide or Nitrogen Trioxide) N_2O_3	312
2.2.4.	Nitrogen Dioxide (Nitrogen Peroxide \rightleftharpoons Dinitrogen Tetroxide (NO_2) ($2NO_2 \rightleftharpoons N_2O_4$))	313
2.2.5.	Nitrogen Pentoxide (N_2O_5) (Dinitrogen Pentoxide or Nitric Anhydride)	316
2.3.	The Structure of Oxides	317
2.3.1.	Nitrous Oxide (N_2O)	318
2.3.2.	Nitric Oxide (NO)	318
2.3.3.	Dinitrogen Trioxide (N_2O_3)	320
2.3.4.	Nitrogen Dioxide (NO_2) and Dinitrogen Tetroxide (N_2O_4)	321
2.3.5.	Nitrogen Pentoxide (N_2O_5) (or Dinitrogen Pentoxide or Nitric Anhydride)	322
3.	Oxyacids	322
3.1.	Hyponitrous Acid (HNO or $H_2N_2O_2$)	324
3.2.	Nitrous Acid (HNO_2) (or Dioxonitric (III) Acid)	325
4.	Nitric Acid (HNO_3)	328
4.1.	Oxidizing Characteristics of HNO_3	330
4.1.1.	Critical Status of Metals viz. Cu, Ag, and Hg	332
4.2.	Nitrating Characteristics of HNO_3	334
4.3.	Reaction with Hydrochloride Acid (HCl)	334
4.4.	Acid Characteristic Feature of Nitric Acid (HNO_3)	335
4.5.	Pernitric Acid (HNO_4)	336
4.5.1.	The Various Structures of Oxyacids	337
	Further Reading References	341
	Problems With Solutions	341
	University Questions	358

9. Chemistry of Group 16 (VIA) Elements: Oxygen Group Elements 362–450

1. Introduction 362
2. Status of Oxygen Group Elements in Periodic Table 362
 - 2.1. Electronic Configuration of Atoms in Oxygen Group Elements 363
 - 2.2. Similarities in Physical Characteristic Features and Their Logical Gradation 363
 - 2.2.1. Atomic Volume-Density-BP-MP of Elements 363
 - 2.2.2. Relevance of Ionization Energies (IEs) 364
 - 2.2.3. Metallic and Non-Metallic Characteristic Features of Group 16 (VIA) Elements 364
 - 2.2.4. Atomicity Profile of Group 16 (VIA) Elements 364
 - 2.2.5. Polymorphism (or Allotropy) 365
 - 2.2.6. Catenation 366
 - 2.2.7. The Oxidation States (OS) 366
 - 2.2.7.1. Negative Oxidation States 366
 - 2.2.7.2. Positive Oxidation States 367
 - 2.3. Group 16 (VIA) Elements: Characteristics and Trends 368
 - 2.4. Similarities in Chemical Characteristic Features and Their Valid Gradation 370
 - 2.4.1. Formation of Hydrides 370
 - 2.4.2. Formation of Halides 374
 - 2.4.2.1. Hexafluorides (MF_6) 374
 - 2.4.2.2. Tetrahalides (MX_4) 375
 - 2.4.2.3. Dihalides (MX_2) 378
 - 2.4.2.4. The Dimeric Monohalides (M_2X_2) 380
 - 2.4.3. Formation of Oxides 381
 - 2.4.3.1. The Monoxides (MO) 381
 - 2.4.3.2. The Dioxides (MO_2) 382
 - 2.4.3.3. The Trioxides (MO_3) 385
 - 2.4.3.4. Heptaoxide (S_2O_7) 387
3. Sulphur: Oxides-Oxyacids-Halides-Oxyhalides 388
 - 3.1. Sulphur: Oxides 388
 - 3.1.1. Sulphur Dioxide (SO_2) 388
 - 3.1.2. Sulphur Trioxide (SO_3) 389
4. Sulphur: Oxyacids 391
 - 4.1. Sulphurous Acids (H_2SO_3) 391
 - 4.1.1. Characteristic Features of Sulphurous Acid (H_2SO_3) 391
 - 4.2. Sulphuric Acids 394
 - 4.2.1. The Sulphuric Acid (H_2SO_4) (or Oil of Vitriol) 394
 - 4.2.1.1. Status of Concentrated Sulphuric Acid (H_2SO_4) 395
 - 4.2.1.2. Structures of Certain Oxyacids of Sulphur 395
 - 4.2.1.3. The Oxidant (or Oxidizing Profile) Status of Sulphuric Acid (H_2SO_4) 396
 - 4.3. Manufacture of Sulphuric Acid (H_2SO_4) 398
 - 4.3.1. Contact Process 399
 - 4.3.1.1. Parameters Absolutely Necessary for Optimized Yield of SO_3 399
 - 4.3.2. Plant-in-use for Manufacture of Sulphuric Acid by Contact Process 401
 - 4.3.3. Contact Process: Plant Used and Detailed Procedure 401
 - 4.3.4. Contact Tower (Preheater, Contact Converter) 403
 - 4.4. Critical Points of Difference between the Contact Process and Chamber Process for the Commercial Production of Sulphuric Acid (H_2SO_4) 405
 - 4.5. The Thiosulphuric Acid ($\text{H}_2\text{S}_2\text{O}_3$) 406
 - 4.5.1. Sodium Thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$) (or Hypo) 407
 - 4.5.1.1. Preparation of Sodium Thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$) 408
 - 4.5.1.2. Characteristic Features of Sodium Thiosulphate ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$) 409

- 4.5.1.3. The Structure of Thiosulphuric Acid ($\text{H}_2\text{S}_2\text{O}_3$) Molecule and Thiosulphate Ion ($\text{S}_2\text{O}_3^{2-}$ Ion) 414
 - 4.5.2. Pyrosulphuric Acid ($\text{H}_2\text{S}_2\text{O}_7$) (or Disulphuric (VI) Acid) 415
 - 4.5.2.1. Pyrosulphuric Acid as Dehydrated Entity of Sulphuric Acid (H_2SO_4) 415
 - 4.5.3. Thionic Acids ($\text{H}_2\text{S}_n\text{O}_6$) 416
 - 4.5.3.1. Dithionite Ion ($\text{S}_2\text{O}_4^{2-}$) (or Dithionite or Hyposulphite) 416
 - 4.5.3.2. Dithionic Acid ($\text{H}_2\text{S}_2\text{O}_6$) 418
 - 4.5.3.3. Dithionates ($\text{S}_2\text{O}_6^{2-}$ Ion) 418
 - 4.5.4. Polythionic Acids ($\text{H}_2\text{S}_n\text{O}_6$; $n = 3, 4, 5, 6$) (or Polythionates) 420
 - 4.5.4.1. Interaction of Sulphur Chlorides (S_2Cl_2) Upon Sulphites (SO_3^{2-}) and Thiosulphates ($\text{S}_2\text{O}_3^{2-}$) in Ethereal Medium 420
 - 4.5.4.2. Passing Hydrogen Sulphide (H_2S) via a Saturated Aqueous Solution of SO_2 421
 - 4.5.4.3. Specific Procedures for the Preparation of Individual Polythionic Acids ($\text{H}_2\text{S}_n\text{O}_6$) 422
 - 4.6. Structure of Polythionic Acids ($\text{H}_2\text{S}_n\text{O}_6$) and Polythionate Ions ($\text{S}_n\text{O}_6^{2-}$ Ions) 425
 - 4.6.1. The Structures of Polythionic Acids and Polythionate Ions 426
 - 4.7. Spatial Configurations of 3-Polythionate Ions 426
 - 4.7.1. Spatial Configuration of Trithionate Ion ($\text{S}_3\text{O}_6^{2-}$) 426
 - 4.7.2. Spatial Configuration of Tetrathionate Ion ($\text{S}_4\text{O}_6^{2-}$) 427
 - 4.7.3. Spatial Configuration of Pentathionate Ion ($\text{S}_5\text{O}_6^{2-}$) 427
 - 4.8. Peroxy (or Peroxo or Per) Sulphuric Acids 428
 - 4.8.1. Peroxomonosulphuric (VI) Acid (H_2SO_5) 428
 - 4.8.2. Peroxodisulphuric Acid ($\text{H}_2\text{S}_2\text{O}_8$) 430
 - 4.8.3. Three Classical Examples Exhibiting Clearly the Oxidizing Characteristics of Perdisulphates ($\text{S}_2\text{O}_8^{2-}$) 432
 - 5. Sulphur: Halides 433
 - 6. Sulphur: Oxyhalides 434
 - 6.1. Thionyl Chloride (SOCl_2) 436
 - 6.2. The Structure of Thionyl Chloride (SOCl_2) 437
 - 6.2.1. Sulphonyl Chloride ($\text{Cl}_2\text{O}_2\text{S}$) 437
 - 6.2.2. Applications of Sulphonyl Chloride 438
 - 6.2.3. The Structure of Sulphonyl Chloride ($\text{Cl}_2\text{O}_2\text{S}$) 438
- Further Reading References 439

10. Chemistry of Group-17 (VIIA) Elements: Halogens-Fluorine and Fluorocarbons-Halogen Acids-Binary Halogen Oxygen Compounds-Oxyacids of Halogens-Inter-Halogen Compounds and Polyhalide Ions and Polyhalides

451-528

- 1. Halogens 451
 - 1.1. Electronic Configuration (Z) 451
 - 1.2. Close Similarities in the Physical Characteristics and Inherent Gradation Amongst Them 452
 - 1.2.1. Occurrence in Nature 452
 - 1.2.2. The Diatomic Characteristics 452
 - 1.2.3. Heat of Dissociation for (DH_d) X_2 Molecules 453
 - 1.2.4. The Oxidizing Characteristic 453
 - 1.2.5. The Heat of Hydration (DH_{hyd}) of X^- Ions 454
 - 1.2.6. The Electronegativity (EN) Profile 455
 - 1.2.7. Clathrate Formation 455

- 1.2.8. Physical State-Density Profile 455
- 1.2.9. Atomic and Ionic Radii 455
- 1.2.10. MPs and BPs 455
- 1.2.11. Colour 455
- 1.2.12. Odour 456
- 1.2.13. Solubility Profile 456
- 1.2.14. Inherent Electron Affinity (EA) 456
- 1.2.15. Ionization Potentials (IPs) of Halogens 457
- 1.2.16. Oxidation States of the Halogens 457
- 1.3. Intimate Similarities in the Chemical Characteristics and Observed Gradation Amongst Them 458
 - 1.3.1. Reactivity Profile 458
 - 1.3.2. Formation of Hydracids (or Binary Acid) 459
 - 1.3.2.1. Some Important Characteristics of Hydracids (or Binary Acids) 460
 - 1.3.3. Formation of Binary Halogen-Oxygen Compounds 461
 - 1.3.4. Formation of Oxyacids 462
 - 1.3.5. Formation of Interhalogen Chemical Entities 463
 - 1.3.6. Formation of Polyhalides 463
- 1.4. Fundamental Characteristic Features of Halogens 463
- 1.5. Chemical Entities Essentially Comprising the Cationic Iodine (I⁺) 464
 - 1.5.1. Iodine Monochloride (ICl) and Iodine Monobromide (IBr) Interhalogen Compounds 464
 - 1.5.2. Iodine Nitrate (INO₃) and Iodine Sulphate (I₂SO₄) 465
 - 1.5.3. Formation of Complex Compounds of Type (Ipy₂)⁺ X⁻ (X = NO₃⁻, ClO₄⁻) 465
 - 1.5.4. Formation of Iodine Perchlorate (I(ClO₄)₃ 2H₂O) 466
 - 1.5.5. Formation of Iodine Triacetate (I(CH₃COO)₃) 467
 - 1.5.6. Iodine Trichloride (ICl₃) 467
- 2. Fluorine And Fluorocarbons 468
 - 2.1. Occurrence of Fluorine (F₂) 469
 - 2.1.1. Modern Method for Commercial Production of Fluorine (F₂) 469
 - 2.1.2. Characteristic Features of Fluorine (F₂) 470
 - 2.2. Fluorocarbons 473
 - 2.2.1. Synthesis of Fluorocarbons 474
 - 2.2.1.1. Electrolytic Replacement of Hydrogen (H₂) by Fluorine (F₂) 474
 - 2.2.1.2. Direct Replacement of Hydrogen (H₂) by Fluorine (F₂) 475
 - 2.2.2. Characteristic Features of Fluorocarbons 475
 - 2.2.2.1. Chlorofluorocarbons and Difluorodichloromethanes 475
 - 2.2.2.2. Tetrafluoroethylene (C₂F₄) 476
 - 2.2.2.3. The Derivatized Compound (CF₃OF) 476
 - 2.2.2.4. Fluorination of Methanol (CH₃OH) 476
- 3. Halogen Acids 476
 - 3.1. Hydrofluoric Acid (H₂F₂) 477
 - 3.1.1. Characteristic Features of Hydrofluoric Acid (H₂F₂) 477
 - 3.1.2. Applications of Hydrofluoric Acid (H₂F₂) 480
 - 3.2. Comparison of Hydrofluoric Acid (H₂F₂) vs Other Halogen Acids (HX) 481
- 4. The Halogen Acids (HX) 484
 - 4.1. Hydrochloric Acid (HCl) 484
 - 4.1.1. Manufacture of HCl 484
 - 4.1.2. Chemical Characteristics of HCl 485
 - 4.2. Hydrobromic Acid (HBr) 486
 - 4.2.1. Preparation of Hydrobromic Acid (HBr) 486
 - 4.2.2. Physical Characteristics of HBr 487
 - 4.2.3. Chemical Characteristics of HBr 487

- 4.3. Hydroiodic Acid (HI) 489
 - 4.3.1. Characteristic Features of HI 489
 - 4.3.2. Chemical Characteristics of HI 489
 - 4.3.3. Solution of HI and Its Status 490
 - 5. Binary Halogen-Oxygen Compounds 491
 - 5.1. Fluorides of Oxygen 492
 - 5.1.1. Oxygen Difluoride (OF₂) 492
 - 5.1.2. Dioxygen Difluoride (O₂F₂) 493
 - 5.2. Oxides of Chlorine 494
 - 5.2.1. Chlorine Monoxide (Cl₂O) or (Dichlorine Monoxide) 494
 - 5.2.1.1. Structure of Chlorine Monoxide (Cl₂O) 495
 - 5.2.2. Chlorine Dioxide (ClO₂) 495
 - 5.2.3. Preparation of Chlorine Dioxide (ClO₂) 496
 - 5.3. Characteristics of Chlorine Dioxide (ClO₂) 496
 - 5.4. Dichlorine Hexaoxide (Cl₂O₆ ⇌ 2ClO₃) 498
 - 5.5. Dichlorine Heptaoxide (Cl₂O₇) 499
 - 5.6. Structure of Chlorine Heptaoxide (Cl₂O₇) 500
 - 6. Oxyacids of Halogens 500
 - 6.1. Oxyacids of Chlorine 501
 - 6.1.1. Characteristic Features of HClO 501
 - 6.2. The Structure of Hypochlorite Ion (ClO⁻) 503
 - 6.3. The Bleaching Powder (CaOCl₂ or Ca (OCl)Cl) 503
 - 6.4. The Chemical Structure of Hypochlorite (ClO⁻) 504
 - 6.5. Estimation of Available Chlorine (Cl₂) in Bleaching Powder 505
 - 6.6. Perchloric Acid (HClO₄) 506
 - 6.6.1. Structure of Perchlorate Ion (ClO₄⁻) 507
 - 6.6.2. Potassium Perchlorate (KClO₄) 508
 - 7. Interhalogen Compounds 508
 - 7.1. Types of Interhalogen Compounds 509
 - 7.2. Diatomic Compounds (viz., ClF, BrF, BrCl, IBr, and ICl) 510
 - 7.3. Iodine Monofluoride (IF) 510
 - 7.4. Chlorine Monofluoride (ClF) 510
 - 7.5. Iodine Monobromide (IBr) 510
 - 8. Polyhalide Ions and Polyhalides 511
 - 8.1. Preparation of Polyhalides 511
 - 8.2. Characteristic Features of Polyhalides 512

Problems With Solutions 515
University Questions 526

11. Elements of Group 18 (ZERO): The Noble Gases

528-569

- 1. Introduction 528
 - 1.1. Nomenclatures of the Noble Gases 528
 - 1.1.1. The Zero Group of the Periodic Table 530
 - 1.2. Noble Gases Occurrence in Nature 532
 - 1.3. Why are the 'Noble Gases' Inert Chemically? 533
- 2. Isolation of Noble Gases From Dry Air 534
 - 2.1. Rayleigh and Ramsay Method (First-Method) 534
 - 2.2. Rayleigh and Ramsay Method (Second-Method) 535
 - 2.3. Fisher Ringe's Method 536
- 3. Dewar's Coconut Charcoal Method: Separation (Isolation) of Individual Gases from Admixture of Noble Gases 537
- 4. Noble Gases: Isolation from Liquified Air via Physical Method 538
 - 4.1. Isolation of Noble Gases From Liquified Air 539

- 4.2. The Significance of Noble Gases in Theoretical Chemistry 541
 - 4.2.1. Inclusion in the Periodic Table 541
 - 4.2.2. Elucidation/Distribution Profiles of the Electronic in Atoms 541
 - 4.2.3. Ultimate Development of the Electronic Theory of Valency 541
 - 4.2.4. Unique Discovery Profile of Isotopes 541
 - 4.2.5. Radioactivity Profile 542
 - 4.3. Chemical Entities Produced by Noble Gases 542
 - 4.3.1. Compounds Generated Under Excited Parameters:
Compounds of Helium (He) 542
 - 4.3.2. Compounds Formed *via* Coordination Phenomenon:
Compounds of Argon (Ar) 543
 - 4.3.3. Compounds of Noble Gases with Water: Formation of Hydrates 543
 - 4.3.4. Compounds Duly Obtained by Physical Trapping Phenomenon:
Clathrate Compounds 544
 - 4.4. Preparation of Clathrate Variants 545
 - 4.5. Various Chemical Entities of Noble Gases 546
 - 4.5.1. Xenon Difluoride (XeF_2) 547
 - 4.5.2. Characteristics of Xenon Difluoride (XeF_2) 547
 - 4.5.3. Xenon Tetrafluoride (XeF_4) 550
 - 4.5.4. Xenon Hexafluoride (XeF_6) 552
 - 4.6. Xenon Trioxide (XeO_3) 555
 - 4.6.1. Preparation of XeO_3 555
 - 4.6.2. Characteristics of XeO_3 556
 - 4.6.3. Structure of Xenon Trioxide Molecule (XeO_3) 557
 - 4.7. Xenon Oxytetrafluoride (XeOF_4) 558
 - 4.7.1. Preparation of Oxytetrafluoride 558
 - 4.7.2. Characteristic Features of XeOF_4 558
 - 4.7.3. Structure of Xenon Oxytetrafluoride (XeOF_4) Molecule 559
 - 4.8. The Fluorides of Krypton (Kr) 559
