

CONTENTS

<i>Preface</i>	v
1. Introduction	1-9
Historical perspectives	
Plant cell and tissue culture	
Developments and scope	
Terminology	
2. Tissue Culture Media	10-17
Composition	
Media preparation	
Sterilization	
3. Cellular and Tissue Differentiation	18-25
Vascular tissue differentiation	
Factors affecting cytodifferentiation	
Cytodifferentiation and cell cycle	
4. Callus Growth Patterns	26-35
Callus initiation	
Callus growth patterns	
Nutritional requirements	
Variation in callus cultures	
5. Organogenesis and Plant Regeneration	36-44
Organogenesis	
Regeneration	
Factors affecting organogenesis	
6. Somatic Embryogenesis	45-53
Development of somatic embryos	
Cytology of somatic embryogenesis	
Genetics of somatic embryogenesis	

viii Contents

	Factors affecting somatic embryogenesis	
	Practical applications of somatic embryogenesis	
7.	Embryo Culture	54-61
	Culture technique	
	Nutritional requirements	
	Practical applications of embryo culture	
8.	Micropropagation	62-70
	Micropropagation techniques	
	Micropropagation of elite plants	
	Factors affecting micropropagation	
9.	Anther Culture and Production of Haploids	71-82
	Culture technique	
	Factors affecting haploid production	
	<i>In vitro</i> androgenesis	
	Isolated microspore and pollen culture	
	Nurse culture technique	
	Diploidization of haploids	
	Cytology of pollen embryoids and plantlets	
	Significance and uses of haploids	
10.	Production of Secondary Compounds	83-90
	Plant cell culture and production of secondary compounds	
	Advantages of tissue cultures in production of useful compounds	
	Culture techniques	
	Genotype and productivity of metabolites	
	Factors affecting production of secondary metabolites	
11.	Protoplast Culture and Somatic Hybridization	91-106
	Isolation of protoplasts	
	Culture of protoplasts	
	Cell wall formation and division	
	Regeneration and organogenesis	
	Somatic hybridization	
	Protoplast fusion	
	Selection procedure	

	Cytoplasmic hybrids (cybrids)	
	Applications of somatic hybridization	
	Protoplast culture and gene transfers	
12.	Recombinant DNA Technology	107-126
	Cloning vehicles	
	Cloning strategies	
	Genomic and cDNA libraries	
	Isolation and purification of DNA from plant cells	
	DNA sequencing	
	Restriction endonucleases	
	Ligase	
	Application of DNA technology	
13.	Biotechnology in Medicine and Human Health	127-137
14.	Biotechnology in Agriculture	138-148
15.	Industry and Fermentations	149-171
	<i>Further Reading</i>	167-171
	<i>Glossary</i>	172-178
	<i>Subject Index</i>	179
