

# CONTENTS

Preface

## PART-I

### Fundamental Theoretical Principles

<i>Chapter</i>	<i>Page</i>
<b>1. Importance, Applications, Nature, Growth and Scope of Analytical Chemistry</b>	<b>3—12</b>
1'1. The Importance of Analytical Chemistry.	
1'2. Applications of Analytical Chemistry to Various Branches of Science.	
1'3. The Nature of Analytical Chemistry : Qualitative and quantitative analysis ; Inorganic and organic analysis ; Analysis, determination and estimation : Major, minor and trace constituents ; Complete and partial analysis ; Major steps of quantitative analysis ; Classical chemical analysis ; Classification of methods of quantitative analysis.	
1'4. The Growth of Analytical Chemistry.	
<b>2. Statistical Treatment of Analytical Data</b>	<b>13—32</b>
2'1. True, Standard and Observed Value.	
2'2. Accuracy and Precision.	
2'3. Significant Figures : Expressing results in exponential form : Absolute and relative uncertainty : Significant figures in mathematical operations.	
2'4. Errors : Types of errors : Minimisation of errors.	
2'5. Absolute and Relative Error.	
2'6. Mean and Relative Mean Deviation ; Physical significance of standard deviation ; Confidence limit and probability ; Rejection of an observation : Student's t test ; F test ; Chi square test.	
2'7. The Importance of Statistical Treatment.	
<b>3. Stoichiometric Calculations</b>	<b>33—42</b>
3'1. Use of Chemical Reactions in Chemical Analysis ; Advantages of rapid reactions ; Completeness of	

chemical reaction ; Stoichiometric calculations ; Incomplete reactions ; Test for completeness of a reaction.

3.2. The Concept of Mole ; Gram formula weight ; Molar and formal solution.

#### 4. Some Theoretical Principles Underlying Analytical Operations 42—86

- 4.1. The Law of Mass Action : Application of law of mass action to analytical chemistry.
- 4.2. Le Chatelier and Braun Principle.
- 4.3. van't Hoff Reaction Isotherm.
- 4.4. The Dissociation Theory ; Electrolytes and non-electrolytes ; Degree of dissociation, strong and weak electrolytes ; Classification of acids, bases and salts according to their degree of dissociation ; Dissociation of acids and dissociation constant ; Dissociation of bases ; Dissociation of salts.
- 4.5. Common Ion Effect.
- 4.6. Solubility Product : Condition for precipitation : Order of precipitation : Condition for solution.
- 4.7. Diverse Ion Effect.
- 4.8. Ionisation of Water ; pH value ; pOH value : Relation between pH and pOH : pH scale.
- 4.9. Salt Hydrolysis ; Degree of hydrolysis and hydrolysis constant.
- 4.10. Buffer solutions ; Buffer action : Calculations of pH of a buffer solution ; pH range of a buffer ; Preparation of a buffer solution of desired pH.
- 4.11. Completeness of a Chemical Reaction.

### PART-II

#### Qualitative Inorganic Analysis

#### 5. Qualitative Inorganic Analysis 89—109

- 5.1. Importance of Qualitative Analysis.
- 5.2. Types of Methods of Qualitative Analysis.
- 5.3. Wet Method of Qualitative Inorganic Analysis.
- 5.4. Analysis of Cations of Group I.
- 5.5. Analysis of Cations of Group II ; Analysis of cations of group IIA ; Analysis of cations of group IIB.

- 5.6. Analysis of Cations of Group III.
- 5.7. Analysis of Cations of Group IV.
- 5.8. Analysis of Cations of Group V.
- 5.9. Analysis of Cations of Group VI.
- 5.10. Interfering Radicals : Detection of interfering radicals : Removal of interfering radicals.
- 5.11. Detection of Acid Radicals ; Preparation of sodium carbonate extract ; Analysis of carbonate and sulphite ; sulphide and sulphite ; carbonate and oxalate ; sulphate, sulphite and sulphide ; and chloride, bromide and iodide radical combinations.

### PART-III

#### Classical Methods of Quantitative Analysis

#### 6. Methods of Gravimetric Analysis 113—142

- 6.1. Gravimetric Analysis.
- 6.2. Gravimetric Factors.
- 6.3. General Principle of Gravimetric Analysis ; Requirements of quantitative separation.
- 6.4. The Process of Precipitation ; Saturated and super saturated solution ; Nucleation ; Crystal growth : Conditions of precipitation ; Completeness of precipitation ; Factors influencing solubility ; Purity of a precipitate ; Adsorption of ions on precipitates ; Coprecipitation, occlusion and post-precipitation.
- 6.5. Digestion of Precipitates.
- 6.6. Washing of Precipitates.
- 6.7. Drying and Ignition of Precipitates ; Thermal decomposition of precipitates.
- 6.8. Laboratory Exercises.

#### Experiment 6.1.

Gravimetric determination of chloride as silver chloride.

#### Experiment 6.2.

Gravimetric determination of silver as silver chloride.

#### Experiment 6.3.

Gravimetric determination of barium as barium sulphate.

#### Experiment 6.4.

Gravimetric determination of sulphate as barium sulphate.

**Experiment 6'5.**

Gravimetric determination of calcium as calcium oxalate.

**Experiment 6'6.**

Gravimetric determination of iron as iron (III) oxide.

6'9. Organic Precipitants ; Gravimetric determination of nickel as nickel dimethylglyoxime.

6'10. Electrogravimetry ; Electrodeposition of metals ; Electrogravimetric determination of copper.

**7. Titrimetric Analysis****143—153**

7'1. General Principle of Titrimetric Analysis.

7'2. Equivalence Point and End Point.

7'3. Fundamental Requirements of a Titrimetric Method.

7'4. Standard Solutions.

7'5. Detection of End Point.

7'6. Indirect Titrations.

7'7. Minimisation of the Titration Error.

7'8. Types of Reactions in Titrimetric Analysis.

7'9. Calculations in Titrimetric Analysis.

**8. Aqueous Acid-Base Titrimetry****154—194**

8'1. Concept of Acidity and Basicity ; Strengths of acids and bases.

8'2. Advantages of Acid-Base Titrations.

8'3. The Concept of Equivalence.

8'4. Equivalent Weight ; Gram-equivalent ; Equivalent weight in acid-base reactions.

8'5. Expressing Concentration of a Solution.

8'6. Expressing Concentration of Solutions in Titrimetric Analysis in Term of Normality.

8'7. Preparation of Standard Solutions ; Primary standards in acid-base titrimetry ; Standardisation of solutions.

8'8. Acid-Base or Neutralisation Indicators ; Theories of indicator action.

8'9. Indicator Constant.

8'10. Choice of Indicator.

8'11. Titration of a Strong Acid with a Strong Base ; Change in pH during the titration of a strong acid with a strong base : Effect of concentration.

- 8'12. Titration of a Weak Acid with a Strong Base.
- 8'13. Titration of a Weak Base with a Strong Acid.
- 8'14. Titration of a Weak Acid with a Weak Base.
- 8'15. Titration of a Polybasic Acid with a Strong Base :  
Titration of phosphoric acid.
- 8'16. Titration of a Mixture of a Strong acid and a Weak Acid.
- 8'17. Titration of a Mixture of a Strong Base and a Weak Base.
- 8'18. Displacement Titration ; Titration of sodium carbonate with hydrochloric acid.
- 8'19. Fluorescent Indicators.
- 8'20. Neutralimetry ; Alkaline primary standards ; Acidic primary standards.
- 8'21. Laboratory Exercises.

**Experiment 8'1.**

Preparation of a 0'1000 M (=0'1000 N) solution of sodium hydroxide.

**Experiment 8'2.**

Preparation of a 0'1000 M (=0'1000 N) solution of hydrochloric acid.

**Experiment 8'3.**

Determination of the normality of the given acid solution by alkalimetry.

**Experiment 8'4.**

Titration of 0'005 M acetic acid iodometrically with a standard thiosulphate solution.

**Experiment 8'5.**

Quantitative analysis of a mixture of sodium hydroxide and sodium carbonate by titration with hydrochloric acid.

**9. Acid-Base Titrimetry in Non-Aqueous Solvents 195—202**

- 9'1. Problems in the Alkalimetric Determination of Weak Acids in Aqueous Medium.
- 9'2. Acid-Base Concept of Bronsted and Lowry ; Conjugate acid and conjugate base.
- 9'3. Some Properties of Solvents.
- 9'4. The Role of Solvent.
- 9'5. The Autoprotolysis Constant.

- 9'6. The Dielectric Constant.  
9'7. Titrations in Basic Solvents.

## 10. Redox Titrimetry

203—244

- 10'1. Oxidation and Reduction.  
10'2. Oxidant and Reductant.  
10'3. Oxidation Number  
10'4. Ion-Electron Method.  
10'5. Dependence of Equivalent Weight on the Reaction.  
10'6. Iodimetry and Iodometry ; Iodimetric determinations ; Iodometric determinations.  
10'7. Application of Redox Reactions in Titrimetric Analysis ; Oxidimetric method ; Some common oxidants and reductants.  
10'8. Laboratory Exercises.

### Experiment 10'1.

Preparation of a 0'1 M potassium permanganate solution.

### Experiment 10'2.

Titrimetric determination of calcium as calcium oxalate by permanganimetric method.

### Experiment 10'3.

Preparation and standardisation of a thiosulphate solution with potassium iodate.

### Experiment 10'4.

Standardisation of a thiosulphate solution with potassium dichromate.

### Experiment 10'5.

Iodometric determination of potassium iodate.

### Experiment 10'6.

Iodometric determination of potassium dichromate.

### Experiment 10'7.

Iodometric determination of copper sulphate.

### Experiment 10'8.

Iodometric determination of potassium permanganate.

### Experiment 10'9.

Preparation of a standard solution of iodine.

- 10'9. Redox System and Redox Potential ; Expression for redox potential.

- 10'10. Calculation of Equilibrium Constant of a Redox Reaction.
- 10'11. Change of Potential During Redox Titration.
- 10'12. Redox Indicators ; Self indicator ; External indicator ; Internal redox indicator.
- 10 13. Choice of Redox Indicator.
- 11. Precipitation and Complexation Titrations 245—264**
- 11'1. Requirements for Precipitation Titrations.
- 11'2. Theory of Precipitation Titrations.
- 11'3. Equivalent Weight Calculation in Precipitation Titration.
- 11'4. Laboratory Exercises.
- Experiment 11'1.**  
Determination of the normality of the given chloride solution by Mohr titration.
- Experiment 11'2.**  
Determination of silver by Volhard titration.
- 11'5. Applications of Volhard's Method
- 11'6. Adsorption Indicators.
- 11'7. Complexometric or Complexation Titrations.
- 11'8. Requirements for Complexometric Titrations.'
- 11 9. Laboratory Exercises.
- Experiment 11'3.**  
Determination of the concentration of a cyanide solution by titration with silver nitrate solution.
- Experiment 11'4.**  
Determination of silver by Liebig titration.
- Experiment 11'5.**  
Determination of mercuric nitrate with standard potassium chloride solution.
- Experiment 11'6.**  
Determination of iodide by titration with mercury (II) solution.
- 11'10. Complex-forming Reactions of EDTA.
- 11'11. Titration of Calcium with EDTA ; The titration curve.
- 11'12. Titration with EDTA Reagent.
- 11'13. Laboratory Exercises.

**Experiment 11'7.**

**Determination of a given solution of zinc with EDTA using Eriochrome Black T indicator.**

**Experiment 11'8.**

**Titrimetric determination of calcium with EDTA involving back-titration with magnesium.**

**11'14. Applications of EDTA Reagent in Titrimetric Analysis.**

- 12. Quantitative Analysis of Some Minerals, Ores and Alloys. 265—276**
- 12'1. Analysis of Real Material.
  - 12'2. Determination of Manganese Content in Pyrolusite.
  - 12'3. Analysis of Dolomite.
  - 12'4. Analysis of Cement.
  - 12'5. Analysis of Brass.
  - 12'6. Analysis of a Silver Coin.
  - 12'7. Analysis of Bronze.

**PART-IV****Separative Techniques**

- 13. Separative Techniques 279—300**
- 13. A. SOLVENT EXTRACTION :
    - 13. A. 1. Distribution Law
    - 13. A. 2. Applications of Distribution Law.
  - 13. B. ION EXCHANGE
    - 13. B. 1. Cation Exchange Resins.
    - 13. B. 2. Anion Exchange Resins.
    - 13. B. 3. Applications of Ion Exchange.
  - 13. C. CHROMATOGRAPHY
    - 13. C. 1. Classification of Chromatographic Processes.
    - 13. C. 2. Adsorption chromatography ; Theoretical basis of separation by adsorption.
    - 13. C. 3. Fluid Partition Chromatography ; Paper chromatography.
    - 13. C. 4. Thin Layer Chromatography.
    - 13. C. 5. High Performance Liquid Chromatography.

- 13. C. 6. Gas Chromatography.
- 13. C. 7. Ion Exchange Chromatography.
- 13. D. SEPARATION BY ELECTROLYSIS
- 13. E. SEPARATION BY VOLATILISATION
- 13. F. SEPARATION BY PRECIPITATION.

#### Experiment 13'1.

Determination of partition coefficient of iodine between water and carbon tetrachloride.

#### Experiment 13'2.

Verification of Freundlich adsorption isotherm.

### PART-V

#### Physicochemical or Instrumental Methods of Quantitative Analysis

#### 14. Quantitative Analytical Methods Based on the Measurements of Electrical Properties 305—338

- 14. A. POTENTIOMETRIC TITRATION METHOD
  - 14. A. 1. Theory ; Measurement of electrode potential ; Indicator and reference electrode ; **Determination** potentiometric titration ; Change of electrode potential during a titration.
  - 14. A. 2. Potentiometric Titration ; Location of end point in a potentiometric titration ; Advantages of potentiometric titrations.
  - 14. A. 3. Laboratory Exercises.

#### Experiment 14'1.

Potentiometric titration of given hydrochloric acid with an alkali solution.

#### Experiment 14'2.

Potentiometric titration of given ferrous sulphate solution with potassium dichromate.

#### 14. B. CONDUCTOMETRIC TITRATION METHOD

- 14. B. 1. Theory ; Measurement of specific conductance ; Specific, molecular and equivalent conductance ; Effect of dilution on specific and equivalent conductance ; Change of conductance during titration ; Change in volume during conductometric titration.

14. B. 2. Conductometric Titration ; Application of conductometric titrations ; Advantages of conductometric titration.

14. B. 3. Laboratory Exercises.

**Experiment 14'3.**

Conductometric titration of hydrochloric acid with sodium hydroxide,

**Experiment 14'4.**

Conductometric titration of hydrochloric acid with ammonium hydroxide.

**Experiment 14'5.**

Conductometric titration of acetic acid with ammonium hydroxide.

**14. C. POLAROGRAPHY AND AMPEROMETRIC TITRATIONS**

14. C. 1. Theory ; Decomposition voltage ; Polarography : Change in diffusion current during a titration.

14. C. 2. Amperometric Titration Method ; Location of end point in amperometric titrations.

14. C. 3. Comparison of Potentiometric, Conductometric and Amperometric Titrations.

14. C. 4. Laboratory Exercise.

**Experiment 14'6.**

Amperometric titration of lead nitrate with potassium dichromate.

**14. D. COULOMETRY**

14. D. 1. Theory ; Coulometers.

14. D. 2. Coulometric Analysis ; Completion of reaction in coulometric analysis.

14. D. 3. Secondary Coulometric Analysis.

14. D. 4. Coulometric Titrations.

**14. E. ELECTROGRAVIMETRIC ANALYSIS**

15. Analytical Methods Based on the Measurement of Radiant Energy 339—370

**15. A. EMISSION SPECTROGRAPHY**

15. A. 1. Spectroscope

15. A. 2. Electromagnetic Spectrum.

15. A. 3. Different Types of Spectra.

15. A. 4. Spectrum Analysis.

- 15. A. 5. Origin of Spectra ; Quantum theory ; Excitation of atoms.
- 15. A. 6. Excitation Methods.
- 15. A. 7. Spectrographic Analysis.
- 15. A. 8. Advantages of Spectrographic Analysis.
- 15. B. **COLORIMETRY**
- 15. B. 1. Theory of colorimetric Analysis : Lambert's Law ; Beer's law ; Applications of Beer's law.
- 15. B. 2. Colorimetric Methods ; Visual colorimetric method ; Photoelectric colorimeter.
- 15. B. 3. Colorimetric Determination Method.
- 15. C. **FLUORIMETRY**
- 15. C. 1. Fluorimeter.
- 15. C. 2. Fluorimetric Method.
- 15. D. **TURBIDIMETRY AND NEPHELOMETRY**
- 15. D. 1. Construction of Calibration Curve for Turbidimetric and Nephelometric Determinations.
- 15. E. **SPECTROPHOTOMETRY**
- 15. E. 1. Dependence of Absorbance on the Wavelength.
- 15. E. 2. Spectrophotometric Determination.
- 15. E. 3. Different Types of Spectrophotometers.
- 15. E. 4. Photometric Titrations.
- 15. F. **FLAME PHOTOMETRY**
- 15. F. 1. Flame Photometer.
- 15. F. 2. Flame Photometric Method.
- 15. G. **ATOMIC ABSORPTION SPECTROSCOPY**
- 15. H. **POLARIMETRY**
- 15. H. 1. Polarimeter.
- 15. H. 2. Measurement of Optical Rotation.
- 15. H. 3. Factors Influencing Optical Rotation.
- 15. H. 4. Applications of Optical Rotation Measurements.

## 15. J. LABORATORY EXERCISES

### Experiment 15.1.

Verification of Beer's law for potassium permanganate solution and determination of the concentration of potassium permanganate in a given soln by colorimetric method.

**Experiment 15·2.**

Colorimetric determination of Iron (III) with potassium thiocyanate.

**16. Radiochemical Methods of Analysis 371—377**

- 16·1. Natural and Artificial Radioactivity.
- 16·2. Radioactive Radiations.
- 16·3. Excitation and Ionisation Caused by Radioactive Radiations.
- 16·4. Detection and Measurement of Radioactive Radiations.
- 16·5. Rate of Disintegration and Decay Constant.
- 16·6. Half-life Period.
- 16·7. Applications of Measurement of Radioactivity in Quantitative Analysis

**17. Quantitative Analytical Methods Based on Some Other Physical Properties 378—390****17. A. METHOD INVOLVING VISCOSITY MEASUREMENT**

- 17. A. 1. Theory ; Coefficient of viscosity ; Poiseuille equation.
- 17. A. 2. Measurement of Relative Viscosity.
- 17. A. 3. Application of Viscosity Measurement to Quantitative Analysis.

**17. B. METHOD INVOLVING SURFACE TENSION MEASUREMENT**

- 17. B. 1. Theory.
- 17. B. 2. Measurement of Surface Tension.
- 17. B. 3. Application of surface Tension Measurement to Quantitative Analysis.

**17. C. METHODS INVOLVING MEASUREMENT OF REFRACTIVE INDEX**

- 17. C. 1. Refractometric-Titrations.

**17. D. METHODS BASED ON MEASUREMENT OF THERMAL PROPERTIES**

- 17. D. 1. Thermometric Titrations.

**Experiment 17·1.**

Determination of heat of neutralisation of a strong acid and a strong base.

## PART-VI

## Elementary Organic Analysis

## 18. Qualitative and Quantitative Organic Analysis 393—436

## 18. A. QUALITATIVE ELEMENTAL ANALYSIS

18. A. 1. Detection of Carbon and Hydrogen.
18. A. 2. Detection of Oxygen.
18. A. 3. Detection of Sulphur.
18. A. 4. Detection of Nitrogen.
18. A. 5. Detection of Nitrogen and Sulphur Present Together.
18. A. 6. Detection of Halogens.
18. A. 7. Detection of Phosphorus.
18. A. 8. Detection of Metals.

## 18. B. QUANTITATIVE ELEMENTAL ANALYSIS

18. B. 1. Determination of Carbon and Hydrogen.
18. B. 2. Determination of Nitrogen ; Duma's method ; Kjeldahl's method.
18. B. 3. Determination of Halogens ; Carius method ; Stepanow's method.
18. B. 4. Determination of sulphur ; Carius method ; Sodium carbonate-potassium nitrate fusion method ; Messenger's method.
18. B. 5. Determination of Phosphorus by Carius Method.
18. B. 6. Determination of Oxygen.
18. B. 7. Calculation of Empirical Formula from Quantitative Analytical Data.
18. B. 8. Determination of Molecular Weight and Molecular Formula.

## 18. C. QUALITATIVE FUNCTIONAL GROUP ANALYSIS

18. C. 1. Physical State.
18. C. 2. Colour.
18. C. 3. Smell.
18. C. 4. Solubility.
18. C. 5. Heating on a Crucible Lid.
18. C. 6. Action of Sodium Hydroxide Solution.
18. C. 7. Action of Concentrated Sulphuric Acid.

18. C. 8. Colouration with Aqueous Ferric Chloride Solution.
18. C. 9. Detection of Elements.
18. C. 10. Detection of Functional Groups ; Alcohols ; Phenols ; Aldehydes ; Ketones ; Carboxylic acids ; Ammonium salts and amides ; Carbohydrates ; Amines ; Nitro compounds ; Halogen derivatives ; Hydrocarbons.
18. D. ORGANIC FUNCTIONAL GROUP DETERMINATION
18. D. 1. Determination of Hydroxyl Group.
18. D. 2. Bromometric Determination of Aniline and Phenol.
18. D. 3. Determination of Carboxyl Group : Silver salt method ; Alkalimetric titration method ; Iodometric method.
18. D. 4. Determination of Glucose.
18. D. 5. Determination of Aldehydes and Ketones ; Method using hydroxylamine hydrochloride ; Method using 2 ; 4-dinitrophenylhydrazine. Sodium bisulphite method: Sodium sulphite method: Sodium sulphite-sulphuric acid method: Determination of formaldehyde (Romijn's method): Determination of Acetone (Messinger's method).
- 18.D.6. Determination of Nitro Group.
- 18.D.7. Determination of Acetamide.
- 18.D.8. Determination of Urea.
19. Analysis of Some Commercial and Biological Samples 446—5
- 19.1. Factors Deciding the plan of Analysis of a Commercial Sample.
- 19.2. General Apparatus Used in Commercial Analysis.
- 19.3. The Analytical Balance.
- 19.4. The Distilled Water Plant.
- 19.5. Heating Devices: Bunsen burner, Hot plates, Electric ovens, Muffle furnace, Infra-red lamps, Air bath, Water or Steam bath, Oil bath.
- 19.6. Triangular stand, Wire gauze, Iron stand, Clamp, Tong, Clay pipe triangle.
- 19.7. Glassware: Weighing bottle watch glass, Stirring rod, Wash bottle, Separatory funnel, Funnel, Desiccator, Quick-fit assembly, Beaker, Conical flask, Test tube.
- 19.8. Graduated Glassware: Volumetric flask, Calibration of volumetric flask, Pipette, Calibration of Pipette Graduated Pipette, Measuring Cylinder, Burette.

- 19.9. Filtration Assembly; Filter paper, Buchner funnel, Sintered glass crucible, Gooch crucible, Centrifuge.
- 19.10. Miscellaneous Items: Plasticware, metalware, Wooden stands, Rubber bulbs and gloves, Racks and stands, Reagent bottles.
- 19.11. Apparatus for Microanalysis: Micro burette, pipettes, conical flask and volumetric flask.
- 19.12. Measuring Instruments.
- 19.A. ANALYSIS OF WATER
  - 19.A.1 Major Water Pollutants: Organic material, Dissolved gases. Inorganic dissolved Solids, Suspended solids, Fertilizing elements, Pathogenic organisms, Heat.
  - 19.A.2. Design of Analytical Scheme for Water Analysis: History of the wastewater, Aim of the analysis, Choice of parameters, Choice of method for analysis.
  - 19.A.3. Insitu Analysis.
  - 19.A.4. Study of Properties of Polluted water: Physical, Chemical and biological parameters.
  - 19.A.5. Collection of the sample.
  - 19.A.6. Measurement of Physical Parameters: Temperature, colour, odour, turbidity, density, viscosity surface tension, conductivity, pH, redox potential, total solids, total dissolved solids, total suspended solids.
  - 19.A.7. Measurement of Chemical Parameters: determination of-total alkalinity, acidity, dissolved carbon dioxide, dissolved oxygen, biochemical oxygen demand, chemical oxygen demand, ammonia, nitrate, nitrite, total nitrogen, inorganic phosphorus, total phosphorus reactive silica, sulphate, hydrogen sulphide, chloride, hardness of water, calcium, magnesium, sodium, potassium, residual chlorine, oil and grease, volatile acids, iron, arsenic, chromium, cadmium, zinc and mercury.
- 19.B ANALYSIS OF SOILS
  - 19.B.1 Determination of pH.
  - 19.B.2 Determination of conductivity.
  - 19.B.3 Determination of Total Alkalinity.
  - 19.B.4. Determination of Chlorides.
  - 19.B.5. Determination of Sulphates.
  - 19.B.6. Determination of Organic Matter.
  - 19.B.7. Determination of Nitrogen.
  - 19.B.8. Determination of Phosphorus.

19.B.9. Determination of Calcium and Magnesium.

19.B.10. Determination of Sodium and Potassium.

### 19.C ANALYSIS OF COAL

19.C.1. Proximate Analysis: Determination of moisture, volatile matter and ash.

19.C.2. Ultimate Analysis: Determination of carbon, hydrogen, nitrogen, sulphur, phosphorus and oxygen.

19.C.3. Determination of Calorific Value: Components of a bomb calorimeter, Procedure for measuring the calorific value.

### 19.D. ANALYSIS OF FATS AND OILS

19.D.1. Determination of Volatile Matter.

19.D.2. Determination of Acid Value.

19.D.3. Determination of Saponification Value.

19.D.4. Determination of Ester Value.

19.D.5. Determination of Iodine Value: Hanus method.

19.D.6. Determination of Bromine Value.

### 19.E. ANALYSIS OF URINE

19.E.1 Qualitative Analysis of Urine: Test for chloride, sulphate, phosphate, calcium, ammonia, urea, uric acid, creatinine, proteins, blood, bile salts, ketone bodies and reducing sugar.

19.E.2. Quantitative Analysis of Urine: Determination of reducing sugar, urea, chloride, acidity, ammonia and creatinine.

### 19.F. ANALYSIS OF BLOOD

19.F.1. Collection of Blood Sample.

19.F.2. Anticoagulants and Preservatives.

19.F.3. Separation of Plasma.

19.F.4. Separation of Serum.

19.F.5. Qualitative Analysis of Serum: Test for albumin and fibrin. Deproteinisation of serum. Test for chloride, phosphate, calcium, glucose, urea, uric acid and creatinine.

19.F.6. Quantitative Analysis of Blood: Determination of blood sugar, urea, uric acid, proteins, cholesterol, calcium and phosphate.

## 20. Gas Analysis and Gasometric Methods

525—534

20.1 Classification of Methods of Gas Analysis.

20.1.A Volumetric Methods: Apparatus used: Absorbents for various gases.

20.1.B. Titration Methods of Gas Analysis.

20.1.C. Physical Methods.

**List of Experiments on Physical Chemistry****Experiment 13.1.**

Determination of partition coefficient of iodine between water and carbon tetrachloride.

**Experiment 13.2.**

Verification of Freundlich adsorption isotherm.

**Experiment 14.1.**

Potentiometric titration of a given hydrochloric acid solution with an alkali solution.

**Experiment 14.2.**

Potentiometric titration of a given ferrous sulphate solution with potassium dichromate

**Experiment 14.3.**

Conductometric titration of hydrochloric acid with sodium hydroxide.

**Experiment 14.4.**

Conductometric titration of hydrochloric acid with ammonium hydroxide.

**Experiment 14.5.**

Conductometric titration of acetic acid with ammonium hydroxide

**Experiment 14.6.**

Amperometric titration of lead nitrate with potassium dichromate.

**Experiment 15.1.**

Determination of specific rotation of cane sugar.

**Experiment 15.2.**

Polarimetric determination of cane sugar.

**Experiment 17. A 3.**

Determination of coefficient of viscosity of a liquid, and finding out percentage composition of a mixture by means of viscosity measurement.

**Experiment 17. B. 3.**

Determination of surface tension of a liquid and finding out percentage composition of a mixture of liquids by means of surface tension measurements.

**Experiment 17.1.**

Determination of the heat of neutralisation of a strong acid with a strong base.

**Experiment 17.2.**

Determination of the heat of dissociation of acetic acid.

<b>Appendices</b>	<b>535–554</b>
<b>Appendix I. Table of Atomic Weights.</b>	
<b>Appendix II Table of Formula Weights</b>	
<b>Appendix III. Solubility Product Constants</b>	
<b>Appendix IV. Dissociation Constants for Acids and Bases</b>	
<b>Appendix V. Surface Tension of some Common Liquids</b>	
<b>Appendix VI. Viscosity Coefficients of Common Liquids</b>	
<b>Appendix VII. Approximate Density of Some Common Substances</b>	
<b>Appendix VIII. Recording the Details of Weighing</b>	
<b>Appendix IX. Reporting Titrimetric Analysis</b>	
<b>Appendix X. The Use of Logarithms.</b>
