*Preface, ix*  
*Contributors, xii*

## **PART I: PRINCIPLES, STRUCTURES, AND TECHNIQUES**

<b>1</b>	<b>Introduction: From Principles to Applications</b>	<b>3</b>
	The Approach, 3	
	Dispersed Phases in Foods, 9	
	Food Dispersions: Microscopic Properties, 25	
<b>2</b>	<b>Elements of Thermophysics and Chemical Thermodynamics: Basic Concepts</b>	<b>32</b>
	Thermophysics, 32	
	Chemical Thermodynamics, 42	
<b>3</b>	<b>Elements of Quantum Mechanics and Quantum Chemistry</b>	<b>45</b>
	The Schrödinger Equation, 46	
	The Hydrogen Atom and the Single-Electron Systems: $\text{He}^+$ , $\text{Li}^{2+}$ , $\text{Be}^{3+}$ , and Other Similar Systems, 48	
	The Electron Distribution in Molecules, 50	
	Appendix—The Hamiltonian: The Correspondence, Uncertainty, and Complementarity Principles, 72	
<b>4</b>	<b>Molecular Structures and Chemical Bonding</b>	<b>77</b>
	Atomic Structure, 77	
	Chemical Bonds, 78	
	Structure of the Water Molecule and Its Molecular Ions, 89	
	Carbohydrates, 96	
	Lipids, 109	
	Amino Acids, 116	
	Proteins, 117	
	Nucleic Acids and Their Components, 158	
<b>5</b>	<b>Techniques</b>	<b>168</b>
	Structural Techniques, 169	
	Spectroscopic Techniques, 183	
	Thermoanalytical Techniques, 198	

**v**

**PART II: APPLICATIONS TO FOOD PROCESSES**

<b>6</b>	<b>Molecular Interactions and Processes in Foods</b>	<b>207</b>
	Van der Waals Interactions, 209	
	Hydrogen Bonds, 212	
	Hydrogen Bonding in Liquid Water, 213	
	Hydrophobic Interactions, 215	
	Radial Distribution Function of Hydrophobic Dispersions and Lipids Associations, 218	
	Micellar or "Colloidal" Electrolytes: Electrical Properties of Colloids, 219	
	Calculation of Free Energy and Enthalpy Changes, 220	
	Elements of the Debye Theory of Dilute Salt Solutions, 221	
	Solute Activity and Chemical Potential, 226	
	Nonideal Behavior of Dispersions, 231	
	Hydration of Proteins, Carbohydrates, and Starch, 241	
	Water Activity in Foods, 243	
<b>7</b>	<b>Physical Chemistry in the Food Processing Pilot Plant</b>	<b>257</b>
	<i>M. F. Kozempel and P. Tomasula</i>	
	Nomenclature, 257	
	Mixing, 259	
	Diffusion, 261	
	Solubility, 264	
	Drum Drying, 268	
<b>8</b>	<b>Rheology of Cheese</b>	<b>273</b>
	<i>M. H. Tunick and E. J. Nolan</i>	
	Why Rheology Is Used in Cheese Analysis, 273	
	Brief History of Rheological Measurements of Cheese, 273	
	Methods Used, 275	
	Analyses of Cheese Varieties, 289	
	The Future, 292	
<b>9</b>	<b>Basic Aspects of Food Extrusion</b>	<b>298</b>
	Extrusion of Newtonian Materials under Isothermal Conditions, 301	
	Velocity Profile Calculation, 301	
	Relationship between Viscosity and Flow Rate, 304	
	Apparent Viscosity of Non-Newtonian Fluids, 306	

End Corrections, 307
Extrusion of Bingham Plastic Materials under Isothermal Conditions, 308
Extrusion of Pseudoplastic Food Doughs under Isothermal Conditions, 309
Isothermal Newtonian Flow in a Single-Screw Extruder, 310
Velocity Profile for Newtonian Flow in a Single-Screw Extruder, 312
Isothermal Non-Newtonian Flow in Single-Screw Extruders, 315
Two Examples of Capillary Rheometry Applications, 316

*Index, 335*
