<i>Foreword</i>	v
<i>Preface</i>	vii
<i>About the Book & Authors</i>	ix
1. SPECIFICATIONS FOR CEMENT	1-3
1.1 Introduction to cement, 1	
2. SPECIFICATIONS AND DATA FOR COARSE & FINE AGGREGATES AND WATER	4-14
2.1 Inspection of aggregate, 4	
2.2 Limits of deleterious materials, 5	
2.3 Percentage of Silt, 5	
2.4 Aggregate crushing value, 6	
2.5 Aggregate impact value, 6	
2.6 Aggregate abrasion value, 6	
2.7 Soundness of aggregate, 7	
2.8 Size and grading of aggregates, 7	
2.9 Fineness modulus of sand, 10	
2.10 Specific gravity, 11	
2.11 Bulk density, 11	
2.12 Surface water carried by aggregate, 11	
2.13 Absorption of the water by dry aggregate, 12	
2.14 Bulking of sand with various moisture contents, 12	

xii Contents

- 2.15 Flakiness index and elongation index, 13
- 2.16 Specifications for water, 13

3. SPECIFICATIONS AND DATA FOR CONCRETE 15-25

- 3.1 Grades of concrete, 15
- 3.2 Strength requirements of concrete, 15
- 3.3 Concrete mix proportioning, 17
- 3.4 Sampling and strength test of concrete, 19
- 3.5 Acceptance criteria, 22
- 3.6 Suggested proportions of fine aggregate to coarse aggregate, 23
- 3.7 Sizes and dimensions of containers for volume batching of ordinary concrete mix, 23
- 3.8 Suggested workability ranges, 24
- 3.9 Typical slump ranges prescribed by Portland Cement Association, Illinois, 24
- 3.10 Degree of workability for various requirements as suggested by CAI, Mumbai, 25

4. METHOD OF SAMPLING CEMENT 26-28

- 4.1 General, 26
- 4.2 Sampling of cement, 26
- 4.3 Terminology, 26
- 4.4 Sampling, 27

5. METHOD OF SAMPLING AGGREGATE 29-35

- 5.1 General, 29
- 5.2 Sampling of cement, 29
- 5.3 Procedure, 29
- 5.4 Sizes of samples required for various tests in accordance with IS : 2386, 33

6. METHOD OF SAMPLING CONCRETE 36-37

- 6.1 General, 36
- 6.2 Sampling of cement, 36
- 6.3 Procedure, 36
- 6.4 From concrete at the time and place of deposition, 36
- 6.5 Mixing the composite sample, 37
- 6.6 Curing of field sample for work-cube test, 37
- 6.7 Sampling of cement, 37
- 6.8 Aggregate, 37
- 6.9 Preparation of materials, 37

7. FREQUENCY OF CONTROL TESTS FOR QUALITY CONCRETE.....	38-40
7.1 General, 38	
7.2 Control of cement, 38	
7.3 Quality control on-water, 39	
7.4 Quality control on aggregate, 39	
7.5 Quality control of concrete, 40	
8. TESTS ON CEMENT	41-60
<i>Experiment 1</i> : To determine water for cement paste of normal consistency, 41	
<i>Experiment 2</i> : To determine initial and final setting time of cement, 44	
<i>Experiment 3</i> : To verify the soundness of cement, 48	
<i>Experiment 4</i> : To determine fineness of cement, 50	
<i>Experiment 5</i> : To determine the compressive strength of cement, 56	
<i>Experiment 6</i> : Field test to verify quality of cement, 58	
9. TESTS ON AGGREGATE	61-97
<i>Experiment 1</i> : Visual inspection of aggregate, 61	
<i>Experiment 2</i> : To determine flakiness index and elongation index of coarse aggregate, 62	
<i>Experiment 3</i> : To determine fine silt in aggregate, 65	
<i>Experiment 4</i> : To determine specific gravity and water absorption of aggregates, 66	
<i>Experiment 5</i> : To determine the specific gravity and water absorption with the size of the aggregate smaller than 10 mm, 69	
<i>Experiment 6</i> : To determine bulk density and voids of aggregates, 71	
<i>Experiment 7</i> : To determine surface moisture in fine aggregate by 'displacement method', 73	
<i>Experiment 8</i> : To determine surface moisture in fine aggregate, 76	
<i>Experiment 9</i> : To determine necessary adjustment for bulking of fine aggregate, 77	
<i>Experiment 10</i> : To determine particle size distribution (grading of aggregate) of fine, coarse and all-in-aggregates by sieve analysis, 79	
<i>Experiment 11</i> : Methods of combining two or more aggregates to give a grading approximate to the one required, 87	
<i>Experiment 12</i> : Method of determining aggregate crushing value, 91	
<i>Experiment 13</i> : Method of determining aggregate impact value, 94	

10. TESTS ON CONCRETE 98-134

- Experiment 1* : Test for workability (slump test), 98
- Experiment 2* : Test for workability (compacting factor test), 104
- Experiment 3* : Test for workability (Vee Bee consistometer test), 106
- Experiment 4* : To determine compressive strength of concrete by cube and cylinder test, 108
- Experiment 5* : To determine flexure strength of concrete, 110
- Experiment 6* : Field method of determining the proportions of ingredients for ordinary concrete mix, 113
- Experiment 7* : Determination of unit weight, yield per bag of cement, cement factor and air content of freshly mixed concrete, 119
- Experiment 8* : Method of making, curing and determining compressive strength of accelerated - cured concrete, 122
- Experiment 9* : Method of determining air content of freshly mixed concrete by the pressure method, 127
- Experiment 10* : Method of determining cement content of hardened Portland Cement Concrete, 132

11. NON-DESTRUCTIVE TESTS AND LATEST TECHNIQUES 135-146

- Method 1* : Ultrasonic pulse technique, 135
- Method 2* : Schmidt rebound hammer test, 139
- Method 3* : Information on some latest non-destructive equipments/ tests, 143

BIBLIOGRAPHY 147-148
