

CONTENTS

	Page
Preface	7
General notices	10
Units of measurement	13

PHYSICAL METHODS

Measurement of mass	17
Determination of melting temperature, melting range, congealing point, boiling point, and boiling range	19
Determination of mass density and relative density	27
Determination of optical rotation and specific rotation	29
Determination of refractive index	32
Spectrophotometry in the visible and ultraviolet regions	33
Spectrophotometry in the infrared region	40
Atomic absorption spectrophotometry	43
Fluorescence spectrophotometry	45
Turbidimetry and nephelometry	49
Colour of liquids	50
Radiopharmaceuticals	52
Powder fineness and sieves	74

PHYSICOCHEMICAL METHODS

Chromatography	79
Determination of pH	95
Electrophoresis	98
Phase solubility analysis	102

CHEMICAL METHODS

General identification tests	111
Limit test for chlorides	115
Limit test for sulfates	116
Limit test for heavy metals	117
Limit test for iron	120
Limit test for arsenic	121
Sulfated ash	123
Oxygen flask method	123

	Page
Complexometric titrations	126
Non-aqueous titration	129
Nitrite titration	133
Determination of water by the Karl Fischer method	134
Determination of methoxyl	135
Determination of nitrogen	136
Determination of iodine value	137
Determination of peroxides in fixed oils	138
Determination of saponification value	139
Determination of unsaponifiable matter	139
Determination of acid value	140

BIOLOGICAL METHODS

Microbiological assay of antibiotics	145
Sterility testing of antibiotics	151
Undue toxicity	154
Test for pyrogens	155
Test for histamine-like substances (vasodepressor substances)	156

METHODS OF PHARMACOGNOSY

Determination of ash and acid-insoluble ash	161
---	-----

MISCELLANEOUS

International chemical reference substances	165
Names, symbols, and relative atomic masses of elements	166
List of reagents, test solutions, and volumetric solutions	167
Index	215
