(e) Effects on strength	40
(f) Effects on elasticity	40
(g) Effects on creep and extensibility	40
(h) Effects on thermal properties	40
(i) Effects on unit weight	41
15. Portland cement	41
(a) Compound composition of cement	41
(b) Types of cement	43
(c) Fineness of cement	49
16. Abnormal set of portland cement	50
17. Classification and use of pozzolans	51
18. Quality and gradation of aggregates	53
(a) Contaminating substances	54
(b) Soundness	55
(c) Strength and resistance to abrasion	56
(d) Volume change	56
(e) Particle shape	57
(f) Specific gravity	57
(g) Gradation	57
19. Quality of mixing and curing water	68
20. Use of admixtures	70
(a) Accelerators	70
(b) Air-entraining agents	73
(c) Water-reducing, set-controlling admixtures (WRA)	74
21. Field control	78
22. Control of heat generation and cracking in concrete	79

CHAPTER II—INVESTIGATION AND SELECTION OF CONCRETE MATERIALS

A. PROSPECTING FOR AGGREGATE MATERIALS

23. General comments	85
24. Maps and materials information	85
25. Geological and related characteristics of aggregates and aggregate deposits	87
(a) Types of deposits	87
(b) Classification and characteristics of rocks	89
(c) Chemical suitability of aggregates	93
26. Prospecting	95
27. Preliminary sampling of prospective aggregate sources and reporting of related information	96

<i>Section</i>	<i>Page</i>
(a) Sand and gravel deposits	96
(b) Prospective rock quarries for concrete aggregate ..	98
B. EXPLORATION OF NATURAL AGGREGATE DEPOSITS	
28. General procedure	98
29. Exploratory excavations	99
(a) Steel-cased test holes	99
(b) Uncased test holes	102
(c) Test pits	105
(d) Trenches	113
30. Designation of deposits and of test holes and test pits	116
31. Reports and samples required	116
C. FACILITIES FOR MATERIALS TESTING AT DENVER	
32. Laboratory facilities	116
D. DENVER TESTS AND SELECTION OF AGGREGATES	
33. Tests of aggregates	121
34. Analysis of field and laboratory data	124
35. Quantity of aggregate	124
36. The selected aggregate	125
E. PROSPECTING FOR POZZOLANIC MATERIALS	
37. Geologic occurrences of pozzolan	126
38. Samples and information required	126
F. DENVER TESTS AND INVESTIGATION OF POZZOLANIC MATERIALS	
39. Tests and analyses of pozzolanic materials	127
G. DENVER INVESTIGATIONS OF OTHER MATERIALS	
40. Cement investigations	127
41. Investigations of admixtures and curing and bonding compounds	128
42. Sampling and analysis of water and soil	128
CHAPTER III—CONCRETE MIXES	
43. Introduction	131
44. Selection of proportions	132
45. Estimate of water requirements	132
46. Estimate of cement requirements	134
47. Estimate of aggregate requirements	134

<i>Section</i>	<i>Page</i>
48. Computations of proportions	137
(a) Example 1	137
(b) Example 2	139
49. Batch weights for field use	141
50. Adjustment of trial mix	142
51. Concrete mix tests	143
52. Mixes for small jobs	144

CHAPTER IV—INSPECTION, FIELD LABORATORY FACILITIES, AND REPORTS

A. INSPECTION

53. Concrete control	147
54. Administrative instructions	147
55. The inspector	147
56. Daily inspection reports	148
57. The inspection supervisor	151

B. FIELD LABORATORY FACILITIES

58. The field laboratory	153
59. Lists of laboratory equipment	159
60. Facilities for curing concrete test specimens	161
(a) Water tanks	161
(b) Storage in moist sand	164
(c) Fogrooms	164

C. REPORTS AND EVALUATION OF TEST DATA

61. Reports	165
(a) Narrative portion	167
(b) Summarized tabulations	168
62. Evaluation of test data	172

CHAPTER V—CONCRETE MANUFACTURING

A. MATERIALS

63. Aggregate production and control	181
64. Sand production	182
65. Wet processing of sand	185
(a) Spiral classifiers	185
(b) Reciprocating rake classifiers	187
(c) Hydraulic classifiers	188
(d) Hydraulic sizers	189
(e) Wet process screens	190

(a) Heavy media separation	203
(b) Hydraulic jiggling	205
(c) Elastic fractionation	206
(d) Sand attrition	206
71. Control of surface moisture in aggregate	206
72. Specific gravity	207
73. Miscellaneous tests of aggregate	207
74. Aggregate purchased	207
75. Cement	208
76. Water	210
77. Admixtures	211
B. BATCHING AND CONTROL FACILITIES FOR LARGE CONCRETE JOBS	
78. Weight vs. volume batching	212
79. Batching equipment	212
80. Checking scales	217
81. Graphic recorders	221
C. BATCHING METHODS AND FACILITIES FOR THE AVERAGE JOB	
82. Central batching by weight	226
83. Weighing equipment	229
84. Batching of liquids	233
D. MIXING	
85. General	238
86. Truck mixers and agitators	240
E. QUALITY CONTROL OF CONCRETE	
87. General	245
88. Consistency	246
89. Slump	249
90. Compressive strength	251
91. Air content and unit weight	254
F. HOT AND COLD WEATHER PRECAUTIONS IN CONCRETE PRODUCTION	
92. Hot weather precautions	255
93. Cold weather precautions	256

CHAPTER VI—HANDLING, PLACING, FINISHING, AND CURING

A. PREPARATIONS FOR PLACING

<i>Section</i>	<i>Page</i>
94. Foundations	261
(a) Rock	261
(b) Earth	261
(c) Porous underdrains	262
95. Construction joints	262
96. Forms	271
97. Marking dates on concrete work	277
98. Reinforcement steel and embedded parts	278
99. Final inspection	280
100. Contractor's preparations	280

B. TRANSPORTING

101. Plant layout and methods	281
102. Transporting	282
(a) Buckets	282
(b) Cars and trucks	282
(c) Chutes	286
(d) Belt conveyors	286
(e) Pneumatic methods	286
(f) Pumping	287

C. PLACING

103. The mortar layer	292
104. General discussion of concrete placement	292
105. Mass concrete	300
106. Tunnel lining	304
(a) Preparation for lining	304
(b) Control of seeping or dripping water	305
(c) Concrete for tunnel lining	306
(d) Placing concrete in tunnel lining	307
107. Monolithic siphons	309
108. Canal lining	313
(a) The concrete mix	313
(b) Reinforcement	314
(c) Placing the lining	315
(d) Contraction joints	325
109. Precast concrete pipe	334

123. Painting and dampproofing of concrete	375
(a) Painting	375
(b) Dampproofing	375
E. CURING	
124. Moist curing	375
125. Curing with sealing membranes	376
126. Steam curing	381
F. CONCRETING UNDER SEVERE WEATHER CONDITIONS	
127. Precautions to be observed during hot weather	382
128. Precautions to be observed during cold weather	383

CHAPTER VII—REPAIR AND MAINTENANCE OF CONCRETE

A. REPAIR OF CONCRETE

129. General requirements for quality repair	393
(a) Workmanship	393
(b) Procedures	393
(c) Materials	394
130. Methods of repair	394
(a) Dry-pack mortar	394
(b) Replacement concrete	395
(c) Replacement mortar	395
(d) Preplaced aggregate concrete	395
(e) Thermosetting plastic (epoxy)	395
131. Prerepair requirements	395
(a) Problem evaluation and repair method selection ..	395
(b) Preparation of concrete for repair	396
132. Use of dry-pack mortar	399
(a) Preparation	399
(b) Application	401
(c) Curing and protection	401
133. Use of replacement concrete	403
(a) Formed concrete	403
(b) Unformed concrete	406
(c) Curing and protection	407
134. Use of replacement mortar	407
135. Use of preplaced aggregate concrete	409
136. Use of thermosetting plastic (epoxy)	409
(a) Materials	409
(b) Preparation of epoxy bonding agent	411

<i>Section</i>	<i>Page</i>
(c) Preparation of epoxy mortar	411
(d) Application of epoxy bonding agent	412
(e) Application of epoxy-bonded concrete	413
(f) Application of epoxy-bonded epoxy mortar	414
(g) Application of epoxy by pressure injection	415
(h) Curing and protection	420
(i) Safety	420
137. Repairing concrete under unusual conditions	421
(a) Seepage conditions	421
(b) Extreme temperature conditions	421
(c) Special color considerations	423
138. Special cases of concrete repair	423
(a) Cracks in concrete siphons	423
(b) Imperfections in precast concrete pipe	425
(c) Concrete cracking and other damage in canal linings	429
B. MAINTENANCE OF CONCRETE	
139. Protection of concrete against weathering	433
(a) General	433
(b) Preparation of surfaces	436
(c) Treatment of surfaces	437
(d) Sealing cracks in concrete	437

CHAPTER VIII—SPECIAL TYPES OF CONCRETE AND MORTAR

A. LIGHTWEIGHT CONCRETE

140. Definition and uses	439
141. Types of lightweight aggregate	439
(a) Cinders	440
(b) Expanded slag	440
(c) Expanded shale and clay	440
(d) Natural aggregate	440
142. Properties of lightweight aggregates	441
143. Construction control of lightweight concrete	442

B. HEAVYWEIGHT CONCRETE

144. Definition and uses	443
145. Types of heavy aggregate	443
(a) Barite	443
(b) Mineral ores (limonite, magnetite)	443
(c) Iron products	443

<i>Section</i>	<i>Page</i>
C. NAILING CONCRETE	
146. Definition, use, and types	444
147. Sawdust concrete	444
148. Types and grading of sawdust	444
D. POROUS CONCRETE	
149. Definition and use	445
E. PREPLACED AGGREGATE CONCRETE	
150. Definition and use	446
151. Properties of preplaced aggregate concrete	446
152. Grout materials and consistency	446
153. Coarse aggregate	447
154. Construction procedures	447
F. PRESTRESSED CONCRETE	
155. Definition and use	449
G. VACUUM-PROCESSED CONCRETE	
156. Definition, characteristics, and uses	453
157. Vacuum forms and panels	455
158. Processing procedure	456
H. CONCRETE FLOOR FINISH	
159. Requirements for a satisfactory finish	457
160. Concrete floors placed as a monolith	457
161. Bonded concrete and mortar floors	457
162. Aggregate	458
163. Proportioning and mixing	458
164. Preparation of the base	460
165. Screeds	461
166. Depositing, compacting, and screeding	462
167. Finishing	462
(a) Floating	463
(b) Troweling	463
(c) Grinding	463
168. Protection and curing	464
169. Liquid hardener treatments	464
170. Nonslip finish	465
171. Colored finish	465
172. Terrazzo finish	467
