<i>Foreword</i> .....	v
<i>Preface</i> .....	vii
<b>1. Introduction</b> .....	<b>1</b>
Divisions of plant ecology, 4	
Development of ecology, 6	
<b>2. The Ecosystem</b> .....	<b>15</b>
Ecosystem components, 19	
Gaia hypothesis, 19	
Trophic relations, 24	
Productivity concept, 31	
Systems analysis and ecomodelling, 33	
Stability controls (homoeostasis), 36	
Types and examples of ecosystems, 39	
<b>3. Light and Temperature Factors</b> .....	<b>40</b>
The light factor, 41	
The temperature factor, 48	
<b>4. Water and Hydrological Cycle</b> .....	<b>56</b>
Atmospheric water and rainfall, 58	
Soil moisture, 62	
Hydrophytes, 65	
Mesophytes, 77	
Xerophytes, 78	
Halophytes, 89	
<b>5. Atmosphere and Gaseous Cycle</b> .....	<b>93</b>
Carbon, 94	

**x Contents**

Oxygen, 97  
Nitrogen, 99  
Wind, 103

<b>6. Soil and Sedimentary Cycle .....</b>	<b>109</b>
Soil components, 110	
Phosphorus, 115	
Calcium, 116	
Sulphur, 117	
Soil dynamics, 124	
<b>7. Fire Factor .....</b>	<b>135</b>
<b>8. Biotic Interrelationships .....</b>	<b>139</b>
Grazing and scraping, 149	
Role of animals in pollution and dispersal of seed and fruit, 151	
<b>9. Autecology and Population Dynamics .....</b>	<b>152</b>
Ecological life cycle, 152	
Ecotypic differentiation, 167	
Population characteristics and dynamics, 171	
r and K selections, 175	
R, C and S selections, 176	
Species interaction and competition, 179	
Keystone species, 180	
<b>10. Synecology and Community Dynamics .....</b>	<b>182</b>
Methods and purpose of studying plant communities, 185	
Qualitative characteristics of communities, 187	
Raunkiaer's life forms, 187	
Quantitative characteristics of communities, 191	
Kinds of quadrats, 192	
Plotless and point methods, 196	
Quantitative structure of plant communities, 197	
Importance value index, 204	
Ecotone, 205	
Zonal and gradient approaches of community organization, 206	
Habitat and niche, 207	
Dominance and diversity, 209	
Community dynamics, 212	
Ecological succession, 214	
Kinds of succession, 216	
Climax, 228	

<b>11. Biodiversity and Major Biomes of the World .....</b>	<b>232</b>
Economic importance, 235	
Causes of biodiversity losses, 238	
Biodiversity in India, 245	
Major biomes, 246	
<b>12. Ecological Energetics .....</b>	<b>259</b>
<b>13. Production Ecology .....</b>	<b>271</b>
Turnover, 272	
Primary production processes, 272	
Production process in C-4 plants, 274	
Production process in CAM plants, 275	
Measurement of primary productivity, 278	
Productivity in different ecosystems, 285	
Litter, 290	
<b>14. Conservation and Management .....</b>	<b>292</b>
Conservation ecology, 293	
Agriculture, 295	
Range management, 297	
Water and wetland management, 306	
Soil conservation, 310	
Conservation of endangered genetic resources, 317	
<b>15. Environmental Pollution .....</b>	<b>320</b>
Air pollution, 321	
Other greenhouse gases, 323	
Ozone and UV-B problems, 329	
Water pollution, 332	
Solid waste pollution, 339	
Radioactive pollution, 340	
Noise pollution, 341	
Noise pollution impacts, 343	
<b>16. Ecotoxicology, Bioindicators, Biomonitoring and     Bioremediation .....</b>	<b>346</b>
<b>17. Flora and Vegetation of India .....</b>	<b>349</b>
Botanical regions, 350	
Western Himalayas, 350	
Eastern Himalayas, 353	
West Indian deserts, 354	
Gangetic plain, 355	
Assam, 356	

**xii Contents**

Central India, 357  
Malabar, 357  
Deccan, 358  
Andaman, 358  
Vegetation of India, 358  
Forest vegetation, 359  
Grassland vegetation, 363

**18. Phytogeography ..... 365**  
Descriptive of static phytogeography, 366  
Arctic zone, 366  
The north temperate zone, 367  
The tropical zone, 371  
The south temperate zone, 375  
Interpretive of dynamic phytogeography, 376  
Basic principles, 377  
Age and area theory, 378  
Endemism, 379  
Centre of origin, 380  
Plant migration and barriers, 381

**19. Practicals, Measurements and Conversions ..... 384**  
**Glossary ..... 398**  
**References ..... 407**  
**Index ..... 439**
