

# Contents

## **Chapter 1: Pharmaceutical Analysis** **1**

- 1.1 Methods of Pharmaceutical or Drug Analysis
- 1.2 Volumetric Analysis
- 1.3 Standard Solution
- 1.4 Methods of Expressing Concentration
- 1.5 Accuracy
- 1.6 Precision
- 1.7 Significant Figures: Definitions and Calculations
- 1.8 Errors: Classification and Minimizations
- 1.9 Sampling: Stages and Safety
- Exercises

## **Chapter 2: Acid/Base Titration** **34**

- 2.1 Types of Acid/base Titrations
- 2.2 Concepts/theories of Acid/base Titrations
- 2.3 Law of Mass Action
- 2.4 Hydrogen Ion Concentration (pH)
- 2.5 Common Ion Effect
- 2.6 Role of Solvents in Acid-Base Titration
- 2.7 Relative Strength of Acids and Bases
- 2.8 Hydrolysis of Salts
- 2.9 Buffers/Buffer Solution/Buffer Systems
- 2.10 Henderson-Hasselbalch Equation
- 2.11 The pH Indicator
- 2.12 Acid Base Indicators
- 2.13 Choice of Indicator in Acid Base Titration
- 2.14 Universal Indicator
- 2.15 Polyprotic Systems
- 2.16 Neutralization or Acid-Base Titration Curves
- 2.17 Mixed Indicators

- 2.18 Important Assays in Acid Base Titration Exercises

**Chapter 3: Oxidation / Reduction Titration** **93**

- 3.1 Terms involved in oxidation reduction titration
- 3.2 Nernst equation
- 3.3 Equilibrium constant for redox system
- 3.4 Types of oxidation and reduction titration
- 3.5 Indicators used in oxidation and reduction titration
- 3.6 Theory of redox indicators
- 3.7 Oxidation reduction curves
- 3.8 Important assay of the oxidation reduction titrations Exercises

**Chapter 4: Precipitation Titration** **114**

- 4.1 Argentometric titration
- 4.2 Preparation and standardization of 0.1N AgNO<sub>3</sub> solution
- 4.3 Solubility product
- 4.4 Fundamentals of precipitation titrations
- 4.5 Theory and curve of argentometry
- 4.6 Equivalent weight in precipitation titrations
- 4.7 Precipitate
- 4.8 Factors affecting the solubility of precipitate
- 4.9 Types of argentometric titrations
- 4.10 Principle of adsorption indicator
- 4.11 Theory of adsorption indicators
- 4.12 The Gay-Lussac method
- 4.13 Titrations involving mercuric nitrate [Hg(NO<sub>3</sub>)<sub>2</sub>]
- 4.14 Titration involving thiocyanate: (CNS)
- 4.15 Assays involved in precipitation titration Exercises

**Chapter 5: Non Aqueous Titration** **136**

- 5.1 Theory in Non-aqueous titrations
- 5.2 Solvents in Non-aqueous titrations
- 5.3 Methodology

- 5.4 Assays by Non-aqueous titrations  
Exercises

**Chapter 6: Complexometric Titration** 150

- 6.1 Complexometric titration with EDTA  
6.2 Titration of metal ion using disodium edetate  
6.3 Theory and titration curve of complexometry  
6.4 Effect of pH on complexometric titration  
6.5 Types of EDTA complexometric titrations  
6.6 Indicators used in complexometric titrations  
6.7 Masking and demasking agents  
6.8 Applications of complexometric titrations  
Exercises

**Chapter 7: Diazotisation Titration** 173

- 7.1 Conditions involved in diazotisation of different amines  
7.2 End point determination  
7.3 Applications of diazotisation titrations  
7.4 Assays in diazotisation titrations  
Exercises

**Chapter 8: Gravimetric Analysis** 182

- 8.1 Definition and classification  
8.2 Solubility product  
8.3 Steps of gravimetric analysis  
8.4 Apparatus used in gravimetric analysis  
8.5 Gravimetric precipitation  
8.6 Thermogravimetric method of analysis  
8.7 Condition of gravimetric precipitation  
8.8 Organic precipitant  
8.9 Specific examples of gravimetric analysis  
Exercises

<i>Appendix</i>	211
<i>Glossary</i>	221
<i>Bibliography</i>	240
<i>Index</i>	242
