<b>1. BIOCHEMICAL PREPARATIONS</b>	<b>1-53</b>
Introduction	1
Active sites	4
Specific activity	7
Tyrosinase as a model enzyme	8
Extraction of tyrosinase	9
Preparation of standard curve of tyrosinase	10
Assessment of optimum enzyme concentration for reaction kinetics	12
Effect of pH on enzyme activity	14
Effect of temperature on enzyme catalyzed reaction	14
Kinetic analysis	15
Determination of $K_m$ and $V_{max}$	16
Kinetic analysis of $\alpha$ -amylase activity	17
Reagents	19
Production of corn syrup using bacterial amylase	22
Evaluation of amino transferases activity	23
Evaluation of phospholipase activity	26
Phospholipase A	26
Phospholipase D	27
Determination of acetylcholinesterase activity	29

Cellulases (cxb (1-4) gluconase) assay	31
Evaluation of papain activity	32
Evaluation of glucose oxidase activity	34
Sucrose synthase (UDP glucose: D-fructose 2- $\alpha$ -d-glucosyl transferase)	36
Lipase enzyme activity determination	37
Isolation of crystalline animal cytochrome C	39
Digestion of proteins into amino acids	44
Determination of serum uric acid	46
Estimation of serum bilirubin	48
Estimation of amylase in saliva	51
Suggested readings	52
<b>2. CARBOHYDRATES</b>	<b>54-82</b>
Qualitative tests for carbohydrates	55
Inversion of sucrose	62
Scheme for the analysis of unknown carbohydrates	62
Quantitative estimation of carbohydrates	63
Glucose estimation by Benedict's quantitative method	63
Enzymatic determination of glucose	65
Determination of total carbohydrate content by anthrone method	66
Glucose assay by dinitrosalicylic acid colorimetric method	67
Preparation of glucose detector	69
Estimation of blood sugar	71
Determination of post prandial blood sugar	73
Separation of sugars by paper chromatography	73
Separation of carbohydrates by thin layer chromatography	76
The mutarotation of glucose	77
Isolation and assay of glycogen from the liver and skeletal muscle of rats	79
Glycogen hydrolysis by $\alpha$ and $\beta$ - amylase	80
Suggested reading	82
<b>3. AMINO ACIDS</b>	<b>83-102</b>
Qualitative tests for amino acids	85
Quantitative analysis of amino acids (Kjeldahl determination)	87

Estimation of $\alpha$ -amino nitrogen in amino acids and protein hydrolysate	90
Amino acid assay by ninhydrin colorimetric method	93
Polarography	94
Paper chromatography of amino acids	95
Thin layer chromatography of amino acids	96
Electrophoretic separation of amino acids by paper electrophoresis	97
Suggested readings	102
<b>4. PROTEINS</b>	<b>103-117</b>
Qualitative tests	104
Determination of coagulation point	106
Preparation of crystalline globulin from vegetable seeds	107
Isolation of plant proteins	108
Simple UV-spectrophotometric determination of serum/plasma proteins	109
Protein assay by Folin-Lowry method	111
Principle	111
Isolation of casein from milk	112
Identification of the C-terminal amino acid of a protein	113
Determination of the free amino end group of some proteins	114
Suggested readings	116
<b>5. LIPIDS</b>	<b>118-138</b>
Qualitative tests for lipids	119
Thin layer chromatography of lipids	121
Isolation of saturated and unsaturated fatty acids from fat	121
Separation of solid and liquid fatty acids (Hilditch's modification of Twitchell's method)	122
Determination of acid value	123
Determination of saponification value	124
Determination of iodine value	126
I. Iodine monochloride method	126
II. Pyridine bromide method	128
Isolation of phospholipids from egg yolk	130

Chromatography of phospholipids	131
Thin layer chromatography of phospholipids	131
Paper chromatography of phospholipids	132
Preparation of cholesterol from brain	133
Unsaponifiable matter	133
Determination of vitamin A	134
Determination of vitamin E	135
Estimation of serum total cholesterol	136
Suggested readings	138
<b>6. NUCLEIC ACIDS</b>	<b>139-165</b>
Introduction	139
Electron microscopy of DNA	142
Ultraviolet spectral analysis of DNA	142
DNA isolation from onion	145
Isolation of deoxyribonucleic acid (DNA)	147
Extraction of DNA from plant source	149
Mammalian DNA isolation using phenol extraction method	150
Mammalian DNA isolation using isopropanol precipitation	152
Genomic DNA isolation from mouse liver	153
DNA isolation from small numbers of cells	155
DNA extraction using phenol	156
Concentration of DNA by ethanol precipitation	157
Estimation of DNA	158
Precipitation of nucleic acids	159
Oligonucleotides precipitation	160
RNA precipitation	160
Isolation of ribonucleic acid (RNA)	160
Estimation of RNA	162
Separation of nucleic acids by MAK column	163
Suggested readings	164
<b>7. ENZYME AND CELL IMMOBILIZATION</b>	<b>166-208</b>
Enzyme immobilization	166
Adsorption and ionic binding	168
Cell immobilization	178

Purification of enzymes for immobilization	180
Enzyme immobilization in polyacrylamide gel	183
Enzyme immobilization in alginate gel	186
Enzyme immobilization in gelatin gel	189
Immobilization of enzymes in gelatin moulds	190
Cell immobilization in agarose	192
Cell immobilization with calcium alginate	193
Preparation of cell immobilized calcium alginate beads	197
Immobilization of microbial cells in gelatin	198
Yeast cell immobilization on wood chips	199
Immobilization of microbial cells by adsorption to solid supports	201
Ethanol production by immobilized yeast cells	202
Estimation of serum alkaline phosphatase	203
Estimation of acid phosphatase	205
Suggested readings	207
<b>8. URINE ANALYSIS</b>	<b>209-230</b>
Physical properties	209
Chemical properties	210
Nitrogenous constituents of normal urine	210
Uric acid	211
Creatinine	211
Non-nitrogenous constituents of normal urine	212
Tests for abnormal constituents of urine	213
Determination of chloride in urine (Volhard's method)	219
Determination of calcium in urine	221
Determination of total nitrogen in urine (Direct nesslerization)	222
Estimation of creatinine in urine [Folin's method]	225
Estimation of reducing sugar in urine [Sumner method]	226
Estimation of ascorbic acid in urine	227
Estimation of total nitrogen in urine [Kjeldahl method]	228
Suggested readings	230

<b>9. FERMENTATION</b>	<b>231-266</b>
Introduction	231
The fermentation process and optimization	234
Yogurt fermentation with lactobacillus cultures	239
Cheese production from milk	242
Batch submerged fermentation of baker's yeast	245
Wine production by yeast	255
Study of variables in wine fermentation	257
Evaluation of produced wine	258
Fermentation products	260
Production of sausages	260
Production of some enzymes	260
Production of kimchee	262
Fermenting power of bread yeast	263
Glucose fermentation	263
Suggested readings	265
<b>10. ELECTROPHORESIS</b>	<b>267-312</b>
Electrophoresis—Introduction	267
Cationic versus anionic systems	269
Tube versus slab system	269
Apparatus for electrophoresis	270
Gel trays	271
Slot makers (comb)	271
Single sample applicator	272
Gel scrapper	273
Leveling table/ gel slicer	273
Cooled platen	273
Agarose gel electrophoresis for DNA separation	273
Optimal voltage and electrophoretic times	275
Gel loading buffers	275
Agarose preparation for electrophoresis	275
Casting agarose gels	280
Vacuum drying agarose gels	285
DNA staining with SYBR green I or II	286
DNA detection using ethidium bromide	290
DNA detection using silver stain	291
DNA detection using methylene blue	293
DNA detection using acridine orange	293

One dimensional agarose gel electrophoresis	294
Separation of serum proteins by paper electrophoresis	296
Two dimensional (2-D) agarose gel electrophoresis of DNA replication intermediates	296
First dimension	298
Second dimension	299
Electrophoretic separation of plasma proteins	300
SDS-polyacrylamide gel electrophoresis	302
Staining and destaining the gels	306
Southern analysis	306
Immunoblot (western blotting)	308
Anti-phosphotyrosine western blotting	310
Suggested readings	311
