Preface to the Second Edition v

Preface to the First Edition vii

1. Atomic and Molecular Spectra: An Introduction	1
1.1 Emission and Absorption Spectra	1
1.2 Wave Number	2
1.3 Spectra and their Classification	3
1.3.1 Emission Spectra	4
1.3.2 Absorption Spectra	7
1.4 Observation of Spectra	7
1.5 Spectral Analysis	8
1.6 Light Sources for Producing Spectra	8
1.7 Luminescence	9
1.8 Fluorescence and Phosphorescence	9
<i>Questions</i>	10

2. Theory of the Atom and Origin of Spectra	11
2.1 Hydrogen Spectrum	11
2.2 Ritz Combination Principle	14
2.3 Bohr's Theory	14
2.3.1 Bohr's Model of a One Electron Atom	15
2.3.2 The Energy Levels and Line Spectra of Hydrogen	18
2.3.3 Bohr Frequency Conditions in Terms of Term Values	20
2.4 Correction for Finite Nucleus Mass (Nuclear Motion and Reduced Mass of the Electron)	21
2.5 Variation of the Rydberg's Constant	23

2.6 Comparison of H and He ⁺ Spectra	24
2.7 Bohr's Correspondence Principle	25
2.8 Wilson-Sommerfeld Quantization Rules	27
2.9 Sommerfeld's Extension of Bohr's Model	29
2.10 Sommerfeld's Relativistic Correction	34
2.11 Fine Structure of Spectral Lines	38
2.12 Limitations of the Bohr-Sommerfeld Theory	38
2.13 De Broglie's Matter Waves	39
2.14 The Schrödinger Equation of Quantum Mechanics	39
2.15 Schrödinger Equation for Spherically Symmetric Potential	43
2.16 Schrödinger Equation for the Hydrogen Atom	45
2.16.1 Energy and Wave Function for the Ground State	46
2.17 Excited States of Hydrogen	48
2.18 Allowed Quantum Numbers and Wave Functions	51
2.19 Periodic Table of Elements	53
2.19.1 Aufbau Principle	54
2.19.2 The Periodic Table	55
2.19.3 Periodicity in the Properties of Elements	57
2.20 Central Field Approximation	60
<i>Questions</i>	62

3. Spectral Lines, Line Width and Line Width

Broadening Mechanisms	64
3.1 Origin of Spectral Lines According to Quantum Mechanics	64
3.2 Line Intensities, Oscillator Strengths and the Thomas-Reiche-Kuhn sum rule	66
3.3 LineWidth	69
3.4 Natural linewidth	69
3.5 Collision Broadening	70
3.6 Emission Linewidth of a Radiating Electron and Homogeneous Broadening	71
3.7 Doppler Broadening	73
3.8 Lifetime Broadening	75
<i>Questions</i>	76

4. Angular Momentum of Electrons, Selection Rules and Spectroscopic Notations	77
4.1 Orbital Magnetic Moment and Bohr Magneton	77
4.2 Angular Momentum of Many Electron Atoms	78
4.3 The Vector Model of the Atom	80
4.3.1 The Four Quantum Numbers	80
4.3.2 Space Quantisation	80
4.3.3 Space Quantisation Diagrams	81
4.3.4 The Vector Model	82
4.4 Two-Electron Atom	83
4.5 Term Symbols	87
4.6 The Vector Model and Spin Orbit Interaction	88
4.7 Hydrogen Fine Structure	90
4.8 Angular Momentum and Selection Rules	94
4.8.1 The Selection Rules	95
4.8.2 The Intensity Rules	96
4.9 Spectroscopic Terms and Spectral Notations	97
4.9.1 Term Symbol from Electronic Configuration	98
4.10 Radiation Shift for the $H\alpha$ Line (Lamb Shift)	100
4.11 Lande's Interval Rule	104
4.12 Normal and Inverted Terms	105
4.13 Spectral Terms of Equivalent Electrons	105
4.14 Selection Rules in Atoms in Central Field Approximation	107
Questions	110
5. Spectra of He Atoms and Alkali Atoms	112
5.1 The States and Spectra of the Atom	112
5.2 Quantum Mechanical Explanation for Splitting of Helium Levels	116
5.3 Broad Features of Alkali Spectra	118
5.4 Explanation for Broad Features of Alkali Spectra	120
5.5 Fine Structure in Alkali Spectra (The Spin Orbit Interaction)	123
5.5.1 Spin Orbit Interaction (and Term Values)	124
5.5.2 Splitting up of the Levels in Alkali Spectra	129
5.6 Intensity Ratio for Doublets	132
5.7 Interaction Energy in L-S and j-j Couplings	134
Questions	141

6. Interaction with Electric and Magnetic Fields	142
6.1 Introduction	142
6.2 Normal Zeeman Effect	143
6.3 Anomalous Zeeman Effect	145
6.4 Selection Rules	148
6.5 Paschen-Back Effect	150
6.6 Stark Effect	152
<i>Questions</i>	153

7. The Nuclear Spin and its Consequences: Hyperfine Structure	154
7.1 Introduction	154
7.2 Isotope Effect in Hyperfine Structure	154
7.3 Nuclear Spin and Hyperfine Splitting	155
7.4 The Vector Model with Nuclear Spin into Account	156
7.5 Normal and Inverted Hyperfine Structure	157
7.6 Back-Goudsmit Effect	159
<i>Questions</i>	159

8. Basic Aspects of Molecular Spectroscopy	160
8.1 Types of Molecular Spectroscopy	160
8.2 Instrumental Methods in Spectroscopy	164
8.2.1 Terms Employed in Absorption Spectroscopy	164
8.2.2 Instrument Components	166
8.3 Atomic Absorption Spectrometry	167
8.4 Born-Oppenheimer Approximation	170
8.5 Stability of Molecular States	173
8.6 Heitler and London Theory of H ₂ Molecule	175
8.7 Microwave Spectroscopy: Introduction	179
8.7.1 Experimental Arrangement for Studying Microwave Spectra	179
8.8 Infrared Spectroscopy	180
8.8.1 Introduction	180
8.8.2 The Range of Infrared Radiation	181
8.8.3 Experimental Arrangement for Studying IR Spectra	181

8.8.4 Instrumentation for Infrared Spectroscopy	182
8.8.5 Single Beam Spectrophotometer	187
8.8.6 Double Beam Spectrophotometer	188
8.8.7 Limitations of Infrared Spectroscopy	189
<i>Questions</i>	189

9. Pure Rotation Spectra (Far Infrared Spectroscopy)	191
9.1 Rigid Rotator	191
9.2 Isotope Effect in Rotational Spectra	201
9.3 Determination of Moment of Inertia and Bond Length	203
9.4 Non-rigid Rotator	204
9.5 Rotation of Molecules	207
9.6 The Diatomic Molecule as a Symmetric Top	210
9.7 Asymmetric Top	212
9.8 Stark Effect in Molecules	212
9.9 Microwave Spectrometer	213
9.10 Information from Rotational Spectra	215
<i>Questions</i>	216

10. Vibration of Molecules	218
10.1 The Vibrating Diatomic Molecule as a Simple Harmonic Oscillator	218
10.2 Vibrations of Polyatomic Molecules	223
10.3 The Normal Vibrations, Normal Coordinates (and Normal Modes)	224
10.4 Types of Normal Modes	226
10.5 Normal Vibrations	228
10.5.1 Normal Vibrations of CO ₂ Molecule	228
10.5.2 Normal Vibrations of Water Molecule	229
10.6 Vibrational–Rotational Spectra	230
10.6.1 Salient Features	230
10.6.2 Fine Structure of Vibration–Rotation Bands	230
10.7 Diatomic Molecule as a Non-rigid Rotator (Anharmonic Oscillator)	231
10.8 Thermal Distribution of Quantum States in Vibrational Bands	235
10.9 Interpretation of Vibrational Spectra	236

10.10	Applications of Infra Red Spectroscopy	236
10.10.1	Identification of Molecular Constituents	237
10.10.2	Elucidation of Molecular Structure	237
10.10.3	Biological Applications	238
10.10.4	Other Applications	238
	<i>Questions</i>	238

11.	Molecular Electronic Spectra	240
11.1	Salient Features of Molecular Electronic Spectra	240
11.2	Electronic Transitions	241
	11.2.1 The Vibrational Structure of Electronic Bands and Franck-Condon Principle	242
11.3	Vibrational Coarse Structure	246
11.4	Rotational Fine Structure of Electronic Vibration Transitions	248
11.5	Rotational Fine Structure of a Particular Vibrational Electronic Band	249
11.6	The Fortrat Diagram	251
11.7	Dissociation	252
11.8	Predissociation	254
	11.8.1 Occurrence of Predissociation	254
	11.8.2 Different Types of Predissociation	255
11.9	Classification of Molecular Electronic States	257
	11.9.1 Electronic Orbital Angular Momentum Vector, L	257
	11.9.2 Electronic Spin Angular Momentum	258
	11.9.3 Total Electronic Angular Momentum	259
11.10	Symmetry Classification of Electronic States	260
11.11	Symmetry Properties of Rotational Levels	261
11.12	Coupling of Nuclear Rotational and Electronic Interactions	263
11.13	Hund's Coupling Case (a)	265
11.14	Hund's Coupling Case (b)	267
11.15	Hund's Coupling Case (c)	269
11.16	Hund's Coupling Case (d)	270
11.17	Uncoupling Phenomena	272
	<i>Questions</i>	273

12. Raman Spectra	274
12.1 Classical Theory of Raman Effect	274
12.2 Molecular Polarizability	275
12.3 The Classical Theory	276
12.4 Quantum Theory of Raman Effect	279
12.5 Apparatus for Studying Raman Effect	280
12.6 Instrumental Components of Raman Spectrography	282
12.7 Rotational Raman Spectra	284
12.8 Vibration-Rotation Raman Spectra	286
12.9 Raman Spectra	288
12.10 Raman Spectra and Molecular Structure	290
12.11 Structure Determination Using IR and Raman Spectroscopy	291
12.11.1 Molecules of the Type XY_2	291
12.11.2 Molecules of the Type XY_3	292
12.12 Stimulated Raman Effect	293
12.13 Einstein's Theory of the Stimulated Raman Effect	294
<i>Questions</i>	298
13. Symmetry Elements	300
13.1 Definition of a Symmetry Operation	300
13.2 Examples of Symmetry Elements	301
13.3 Symmetry Elements in PCl_3	304
13.4 Schönflies Notation for Point Groups	305
13.5 Classification of Groups	306
13.6 Matrix Representation of an Operation	307
13.7 Matrix Notation for Symmetry Transformations	309
13.8 Products of Symmetry Operations	312
13.9 Multiplication Table	314
13.10 A Representation of the Group	315
13.11 Group Multiplication Table for the Point Group C_{2v}	315
13.12 Reducible and Irreducible Representation	316
13.13 Class of a Group	317
13.14 The Great Orthogonality Theorem	318
13.15 Character Table and its Properties (Character Table of Group C_{3v})	320
13.16 Character Table for Point Group C_{2v}	322
<i>Questions</i>	323

14. Nuclear Magnetic Resonance Spectroscopy	324
14.1 The Nuclear Spin	324
14.2 Nuclear Magnetic Moment	325
14.3 Precession of a Nucleus in a Magnetic Field	327
14.4 Energy Levels in a Magnetic Field	328
14.5 NMR Spectra	331
14.6 Instrumentation	332
14.7 Interpretation of NMR Spectra	333
14.8 Relaxation Processes in NMR	337
14.9 Spin Flip in NMR and the Principle of Resonance	339
14.10 Magnetic Resonance Imaging (MRI)	340
<i>Questions</i>	341

15. Electron Spin Resonance Spectroscopy	342
15.1 Electron Spin Behaviour (Principle of ESR)	342
15.2 ESR Instrumentation and Working	345
15.3 Hyperfine Interactions and Qualitative Analysis in ESR Spectroscopy	348
15.4 Comparison Between NMR and ESR	350
15.5 Information Obtained from ESR Spectroscopy	350
<i>Questions</i>	350

16. Fourier Infrared (FIR) Spectroscopy	351
16.1 Introduction	351
16.2 Principle of Fourier Transform Spectroscopy	352
16.3 Advantages of Fourier Transform Spectroscopy	354
<i>Questions</i>	355

17. Photoacoustic Spectroscopy	356
17.1 Introduction	356
17.2 The Photoacoustic Effect	357
17.3 Instrumentation in Photoacoustic Spectroscopy	357
17.4 Applications	360
<i>Questions</i>	360

18. Mössbauer Spectroscopy	361
18.1 Introduction	361
18.2 Principle of Mössbauer Spectroscopy (NRF)	361
18.3 Experimental Method	363
18.4 Apparatus for Mössbauer Spectroscopy	365
18.5 Resonance Fluorescence	367
18.6 Applications of Mössbauer spectroscopy	371
<i>Questions</i>	371

19. Lasers	372
19.1 Introduction	372
19.2 Schematic of a Typical Laser	375
19.3 Unique Properties of Laser Light	376
19.4 Working of an Optical Resonator (Elementary Idea)	382
19.5 The Einstein Coefficients in Relation to Spontaneous and Stimulated Emission	386
19.6 The Spontaneous Emission Rate and Emission Intensity	390
19.7 Population Inversion	391
19.8 Lasing Gain Constant and Inversion Temperature	393
19.9 Laser Cavity Modes	394
19.10 Threshold Condition for Laser Oscillation and Laser Rate Equations	406
19.11 Three Level Laser Rate Equations	410
19.12 Four Level Laser Rate Equations	415
19.13 Single Mode Oscillation or the Time Dependent Behaviour of a Three Level Laser	416
19.14 Methods of Achieving Population Inversion	419
19.15 Ruby Laser	420
19.16 Effect of Laser Cavity on the Emitted Frequency	423
19.17 Various Line Widths Associated with a Laser	424
19.18 Laser Spiking	425
19.19 The Helium-Neon Laser	426
19.20 The Nd:YAG Laser	429
19.21 Excimer Laser	430
19.22 Semiconductor Diode Lasers	433
19.23 Semiconductor Heterojunction Injection Laser	439

19.24	Dye Lasers	442
19.25	The Carbon Dioxide Laser	444
19.26	The Q-Factor	447
19.27	Q-Switching	448
19.28	Mode Locking	450
19.29	Non-linear Optical Effects with Lasers	451
19.30	Applications of Lasers	452
19.31	Applications of Lasers in Industry	455
19.32	Use of Lasers in Scientific Exploration	457
19.33	Neodymium-Glass Laser	458
	<i>Questions</i>	459
<hr/>		
20.	X-ray Spectra	460
20.1	Production of X-rays	460
20.2	Properties of X-rays	461
20.3	The Continuous and Characteristic X-radiation	461
20.4	X-ray Energy Levels and Characteristic X-ray Spectra	464
20.5	X-ray Absorption Spectra	466
20.6	Moseleys Law	468
20.7	Comparison between X-ray Spectra and Optical Spectra	472
	<i>Questions</i>	473
<hr/>		
21.	Selection Rules in Spectroscopy	474
21.1	Introduction	474
21.2	Dipole Moment based Selection Rules	474
21.3	Rotational Transitions	476
21.4	Vibrational Transitions	476
21.5	Selection Rules for Electronic Spectroscopy	477
21.6	Selection Rules for Pure Rotational and Vibrational Spectroscopy	479
	<i>Appendix A: The Auger Process</i> (Spontaneous Radiationless Decomposition of Atoms)	481
	<i>Appendix B: The Ammonia Maser</i>	484
	<i>Appendix C: Mode Locking in Lasers</i>	491
	<i>Appendix D: Dirac Notation in Quantum Mechanics</i>	494
	<i>Bibliography</i>	496
	<i>Index</i>	499
