|--|----------|
| <b>Chapter 1. Microscopy</b>               | <b>1</b> |
| 1.1 A Journey to the Microscope            | 1        |
| 1.2 Introduction                           | 3        |
| 1.3 Properties of Light                    | 3        |
| 1.4 Principle of Optics                    | 5        |
| 1.4.1 Magnification                        | 5        |
| 1.4.2 Contrast                             | 5        |
| 1.4.3 Resolution                           | 6        |
| 1.4.4 Resolving power                      | 6        |
| 1.4.5 Numerical Aperture                   | 7        |
| 1.4.6 Lens                                 | 7        |
| 1.4.7 The Aberration of Lenses             | 8        |
| 1.5 Types of Microscope                    | 10       |
| 1.6 Simple Microscope                      | 11       |
| 1.7 Light Microscope                       | 12       |
| 1.7.1 Bright Field Microscope              | 12       |
| 1.7.2 Dark field Microscope                | 14       |
| 1.8 Compound Microscope                    | 15       |
| 1.8.1 Mechanical system                    | 15       |
| 1.8.2 Optical system                       | 17       |
| 1.8.3 How to use                           | 18       |
| 1.8.4 Focusing the Microscope              | 18       |
| 1.8.5 Care and precaution                  | 19       |
| 1.8.6 Application                          | 19       |
| 1.9 Oil Immersion Microscope               | 19       |
| 1.9.1 Basic principle                      | 20       |
| 1.9.2 Handling of Oil immersion microscope | 20       |
| 1.9.3 Application                          | 21       |
| 1.9.4 Limitations                          | 21       |
| 1.10 Estimation of size                    | 21       |
| 1.11 Micrometry                            | 22       |
| 1.12 Phase Contrast Microscope             | 23       |
| 1.12.1 Principle                           | 24       |
| 1.12.2 Image formation                     | 25       |
| 1.12.3 Advantages and Application          | 25       |
| 1.13 Interference Microscope               | 25       |
| 1.13.1 Theory and principle                | 25       |
| 1.13.2 Application                         | 26       |

|                                    |  |           |
|------------------------------------|--|-----------|
| 1.14                               | Polarizing Microscope                    | 27        |
| 1.14.1                             | Salient features of Light                | 27        |
| 1.14.2                             | Theory and principle                     | 28        |
| 1.15                               | Fluorescence Microscope                  | 28        |
| 1.15.1                             | Theory and principle                     | 29        |
| 1.15.2                             | Instrumentation                          | 29        |
| 1.15.3                             | Application                              | 31        |
| 1.16                               | Stereomicroscope or Binocular Microscope | 31        |
| 1.16.1                             | Theory and principle                     | 32        |
| 1.16.2                             | Uses of Stereomicroscope                 | 32        |
| 1.17                               | Comparison Microscope                    | 33        |
| 1.17.1                             | Theory and principle                     | 33        |
| 1.17.2                             | Application                              | 33        |
| 1.18                               | Confocal Microscope                      | 34        |
| 1.18.1                             | Basic principle                          | 34        |
| 1.18.2                             | Types of Confocal Microscope             | 34        |
| 1.18.3                             | Basic methodology                        | 34        |
| 1.18.4                             | Application                              | 34        |
| 1.19                               | Magnetic Resonance Microscopy            | 35        |
| 1.20                               | Electron Microscope                      | 36        |
| 1.20.1                             | Transmission Electron Microscope         | 36        |
| 1.20.1.1                           | Principle                                | 37        |
| 1.20.1.2                           | Image Formation                          | 37        |
| 1.20.1.3                           | Instrumentation                          | 37        |
| 1.20.1.4                           | Application of TEM                       | 41        |
| 1.20.2                             | Scanning Electron Microscope             | 41        |
| 1.20.2.1                           | Theory and principle                     | 41        |
| 1.20.2.2                           | Specific feature                         | 42        |
| 1.20.2.3                           | Instrumentation                          | 42        |
| 1.20.2.4                           | Sample preparation                       | 43        |
| 1.20.2.5                           | Specimen Interaction                     | 45        |
| 1.20.2.6                           | Specimen interaction volume              | 45        |
| 1.20.2.7                           | Signal produced by specimen              | 45        |
| 1.20.2.8                           | Application                              | 46        |
| 1.21                               | Scanning Tunneling Microscope            | 46        |
| 1.21.1                             | Theory and principle                     | 48        |
| 1.21.2                             | Application                              | 48        |
|                                    | References                               | 48        |

| 2.4.1                          | Microscope                               | 53        |
| 2.4.2                          | Camera                                   | 53        |
| 2.4.3                          | Light System                             | 54        |
| 2.4.4                          | Film                                     | 54        |
| 2.4.5.                         | Filters                                  | 54        |
| 2.4.6.                         | Photographic papers                      | 54        |
| 2.4.7.                         | Photocapture                             | 55        |
| 2.4.8.                         | Development of film                      | 56        |
| 2.4.9.                         | Positive Photograph preparation          | 56        |
| 2.4.10.                        | Developer                                | 57        |
| 2.4.11.                        | Stop-bath                                | 57        |
| 2.4.12.                        | Fixing                                   | 57        |
| 2.5                            | Ultraviolet Photography                  | 58        |
| 2.6.                           | Infra-red Photography                    | 59        |
| 2.7.                           | Microphotography                         | 60        |
|                                | References                               | 60        |
| <b>Chapter 3. Spectroscopy</b> |  | <b>61</b> |
| 3.1                            | Introduction                             | 61        |
| 3.2                            | Electromagnetic Radiation                | 61        |
| 3.3                            | Electromagnetic spectrum                 | 62        |
| 3.4                            | Electronic excitation                    | 62        |
| 3.4.1                          | Electronic spectra                       | 63        |
| 3.4.2                          | Absorption band characteristics          | 63        |
| 3.5                            | UV - Visible Spectrophotometer           | 63        |
| 3.5.1                          | Introduction                             | 63        |
| 3.5.2                          | Theory and principle                     | 64        |
|                                | 3.5.2.1 Beer and Lambert's Law           | 64        |
|                                | 3.5.2.2 Conditions of Beer Lambert's law | 66        |
| 3.5.3                          | Instrumentation                          | 66        |
| 3.5.4                          | Solvent choice                           | 69        |
| 3.5.5                          | Sampling Technique                       | 69        |
| 3.5.6                          | Application                              | 70        |
| 3.5.7                          | Difference spectrophotometer             | 71        |
| 3.5.8                          | Microspectrophotometer                   | 71        |
| 3.6                            | Atomic Absorption Spectroscopy           | 71        |
| 3.6.1                          | Basic principle                          | 72        |
| 3.6.2                          | Instrumentation                          | 72        |
| 3.6.3                          | Application                              | 74        |
| 3.6.4                          | Advantages                               | 75        |
| 3.6.5                          | Limitations                              | 75        |
| 3.7                            | Flameless Atomic Absorption Spectroscopy | 75        |

|                                  |                                   |            |
|----------------------------------|-----------------------------------|------------|
| 3.8                              | Atomic Emission Spectroscopy      | 76         |
| 3.8.1                            | Basic principle                   | 76         |
| 3.8.2                            | Instrumentation                   | 76         |
| 3.8.3                            | Application                       | 78         |
