CHAPTER 1

Well ordering Principle and Mathematical Induction

1.1	Introduction	1
1.2	Number system	1
1.3	Basic binary operation on the set of integers	2
	1.3.1 Addition Axioms	2
	1.3.2 Multiplication Axioms	3
1.4	Ordering of the integers	3
1.5	Well ordering principle	4
	1.5.1 Archimedean property	4
1.6	Mathematical induction	4
	1.6.1. Principles of finite induction	15
1.7	Basic representation theorem	17

CHAPTER-2

Divisibility Theory

2.1	Introduction	25
2.2	Division algorithm	25
2.3	Greatest common divisor	33
2.4	Absolutely least remainder algorithm or minimal algorithm	33
2.5	Relatively prime integers	37
2.6	Algorithm to find g.c.d.	40
2.7	Greatest common divisor of more than two integers	44
2.8	Least common multiple	45
2.9	Least common multiple of n integers	46
2.10	Fibonacci sequence	48
2.11	The pigeonhole principle and division algorithm	53

CHAPTER-3

Linear Diophantine Equations

3.1	Introduction	61
3.2	Linear diophantine equation	61
3.3	Solution of the equation $ax + by = c$	61
3.4	Euler's method for solving linear diophantine equations	65

3.5	Diophantine equation in three or more unknowns	70
3.6	Diophantine equation of the second degree	72
3.7	General integer solution of Pythagores equation	73
3.8	General integer solution of the equation $x^2 + y^2 + z^2 = w^2$	74
3.9	Solution of general diophantine equation of second degree	75
3.10	Equation $x^n + y^n = z^n$	76

CHAPTER-4

Primes and Their Distributions

4.1	Introduction	83
4.2	Prime numbers	83
4.3	The sieve of Eratosthenes	87
4.4	Positive divisors of a positive integer	92
4.5	The Goldbach's conjecture	93
	4.5.1 Bertrand's Conjecture	93

CHAPTER-5

Congruences

5.1	Introduction	99
5.2	Congruence	99
5.3	Properties of congruences	99
5.4	Least and minimal residue	102
5.5	Complete and reduced residue systems	105
5.6	Euler's function	106
5.7	Special divisibility tests	107
5.8	Linear congruence	109
5.9	Chinese remainder theorem	111
5.10	Congruences of higher degree	117

CHAPTER-6

Fermat's Theorems and Its Applications

6.1	Introduction	121
6.2	Fermat's Factorization Method	121
6.3	Fermat's Little Theorem	122
6.4	Fermat's Last Theorem	125
6.5	Wilson's theorem	128
	6.5.1 General form of Wilson's theorem	129
6.6	Euler's factorization method	130
6.7	Mersenne's factorization method	131

CHAPTER-7

Number Theoretic Functions

7.1	Introduction	141
7.2	The function τ and σ	141
7.3	De polignac's formula	146

7.3.1	Applications of De Polignac's formula	147
7.4	Multiplicative function	150
7.5	Mobius function	151
7.6	Euler's function	159
7.6.1	General formula for calculating $\phi(m)$	159
7.7	Some other important number theoretic functions	166

CHAPTER-8

Complex Numbers

8.1	Introduction	181
8.2	Complex numbers	181
8.3	Notations	182
8.4	Reduction of complex numbers to the standard form $r(\cos \theta + i \sin \theta)$	182
8.5	Geometrical representation of complex numbers	183
8.5.1	Vector Representation of Complex Number	183
8.5.2	The sum and difference of two complex numbers represented by a point on the Argand's plane	183
8.6	Product and quotient of two complex numbers	184
8.6.1	Geometrical representation	184
8.6.2	Geometrical representation	185
8.7	Conjugate of a complex number	186
8.8	Properties of moduli	186
8.9	Demoivre's theorem	196
8.10	To show that $(\cos \theta + i \sin \theta)^{p/q}$, where p and q are integers prime to each other, q being positive, has q distinct value and no more	206

CHAPTER-9

Exponential and Trigonometric Functions of a Complex Variable

9.1	Convergence	223
9.1.1	Absolute Convergence	223
9.2	Exponential Series of complex numbers	223
9.3	Properties of exponential function of complex numbers	224
9.4	Circular function of complex quantities	225
9.5	Euler's exponential value	226
9.6	Periods of complex circular functions	227
9.7	Period of e^z	227
9.8	Some trigonometrical identities for complex variable	228
9.9	Hyperbolic functions	233
9.10	Relation between hyperbolic and circular functions	234
9.11	Some important results of hyperbolic functions	234
9.12	Expansions of $\sinh x$ and $\cosh x$	239
9.13	Period of hyperbolic functions	240
9.14	Geometrical analogy between circular and hyperbolic functions	240

CHAPTER-10
Logarithm of Complex Quantities

10.1	Introduction	249
10.2	Logarithm of a positive real number	250
10.3	Logarithm of a negative real number	250
10.4	Logarithm of $x + iy$ in the form of $A + iB$	250
10.5	Some important results	251
10.6	General exponential function	262
10.7	Real and Imaginary part of $(\alpha + i\beta)^p + iq$	262
10.8	Logarithms of any base	263

CHAPTER-11
Inverse Circular and Hyperbolic Functions of a Complex Number

11.1	Inverse circular functions	277
11.2	Inverse hyperbolic function	279
11.3	Relation between inverse hyperbolic function and inverse circular functions	281

CHAPTER-12
Polynomial with Real Coefficients

12.1	Introduction	297
12.2	Number of roots of any equation	297
12.3	Relation between the roots and coefficients	298
12.4	Important results	299
12.5	Horner's synthetic division	299
12.6	Transformation of equation	300
12.7	Removal of terms of an equation	305
12.8	An important relation	309
12.9	General method of transformation	309
	12.9.1 Nature of roots of the given equation.	311
12.10	Descartes' rule of signs	320
	12.10.1 Negative roots	321
	12.10.2 Complex roots	321
12.11	Change of sign	321
12.12	Multiple roots	327
	12.12.1 Determination of multiple roots	328
	12.12.2 Condition for two or three equal roots.	328
12.13	Maximum and minimum values of $f(x)$	339
12.14	Rolle's theorem	340
12.15	Limits of the roots of an equation	341
12.16	Method of finding the upper limit of the roots	343
	12.16.1. Method of grouping	347
12.17	Lower limit deduced from upper limit	349
12.18	Sturm's method of finding the exact number of real roots of an equation	351
12.19	Sturm's functions	351

12.20	Sturm's theorem	351
	12.20.1 Nature of the roots	355
12.21	Condition for all the roots real and distinct	367
12.22	Nature of the roots of biquadratic	268

CHAPTER-13

Algebraic Solution of Cubic Equations

13.1	Cardan's method to find the roots of a cubic equation	375
13.2	Application of Cardan's method	376
13.3	Method by expressing the equation as sum or difference of two cubes	377
13.4	Hessian of the cubic equation	378

CHAPTER-14

Solution of Biquadratic Equations

14.1	Reduction of biquadratic equation into Euler's cubic and reducing cubic	389
14.2	Relation between the roots of biquadratic and Euler's cubic	390
14.3	Relation between the roots of biquadratic and the reducing cubic	392
14.4	Descartes' method for finding the roots of a biquadratic	392
14.5	Ferrari's method for finding the roots of a biquadratic equation	393

CHAPTER-15

Inequalities

15.1	Introduction	401
15.2	Fundamental properties of inequalities	401
15.3	Relation between arithmetic mean and geometric mean	402
15.4	Some important results	402
15.5	The greatest value	405
15.6	Some more results	416
15.7	Maxima and minima	434

CHAPTER-16

Determinants

16.1	Introduction	443
16.2	Order of a determinant	443
16.3	Determinant of order two	443
16.4	Determinant of order three	444
16.5	Co-factor and minors of an element	445
16.6	Properties of determinants	448
	16.6.1 Some more properties	451

CHAPTER-17

Matrices

17.1	Introduction	475
17.2	Type of matrices	475
	17.2.1. Triangular, diagonal and scalar matrices	476

17.3	Determinant of square matrix	477
17.4	Singular and non-singular matrix	478
17.5	Sub-matrix of a matrix	478
17.6	Minors of a matrix	478
17.7	Transpose of a matrix	478
17.8	Symmetric and skew-symmetric matrices	478
17.9	Complex matrix	479
	17.9.1 Conjugate of complex matrix	479
	17.9.2 Transpose conjugate of a matrix	479
	17.9.3 Hermitian and skew-hermitian matrices	479
17.10	Algebra of matrices	480
17.11	Properties of matrix addition	482
17.12	Multiplication of matrices	486
17.13	Adjoint of a matrix	503
17.14	Inverse or reciprocal of matrix	504
17.15	Orthogonal and unitary matrices	506
	17.15.1 Orthogonal matrix	506
	17.15.2 Unitary matrix	507
17.16	Rank of a matrix	518
17.17	Echelon form of a matrix	518
17.18	Elementary transformations of a matrix	519
17.19	Elementary matrices	519
17.20	Invariance of rank under E -transformation	520
17.21	Normal form	522
17.22	Equivalence of matrices	523
17.23	Row-transformations (employment)	524
17.24	Column-transformations (employment)	524
17.25	Rank of product of matrices	524
17.26	Linear equations	538
	17.26.1 Homogeneous linear equations	538
	17.26.2 Trivial Solution	539
	17.26.3 Non-trivial solution	539
17.27	Nature of the solution of equation $AX = 0$	539
17.28	Non-homogeneous equations	542
	17.28.1 Consistency and inconsistency	542
	17.28.2 Augmented matrix	542
17.29	Condition for consistency	542
17.30	Conditions for a system of n -equations in n -unknowns to have a unique solution	543
17.31	Cramer's rule	555
17.32	Gauss elimination method	560
	<i>Index</i>	573
