<i>Preface to the Third Edition</i>		v
<i>Preface to the First Edition</i>		vii
1. KINEMATICS	1	
Introduction	1	
Frame of Reference and Coordinate Systems	2	
Rectangular or Cartesian Coordinate System	2	
Spherical Polar Coordinates	3	
Cylindrical Coordinates	5	
Galileo's Principle of Relativity and Galilean Transformations	6	
Invariance of Galilean Transformations	6	
Conservation of Momentum	7	
Non-inertial Frames	9	
Reference Frame with Translational Acceleration and Fictitious or Pseudo or Inertial Force	9	
Downward Movement of Frame S'	10	
Upward Movement of Frame S'	11	
Equation of Motion in a Rotating Reference Frame	11	
Coriolis and Centrifugal Forces	12	
Coriolis Force	13	
Generalized Equation of Motion in a Non-inertial Frame	14	
Motion Relative to the Earth	14	
Illustrative Examples	17	
Review Questions	19	
Problems	19	
Short Answer Questions	20	
Objective Questions	20	
Multiple Choice Questions	20	
2. SPECIAL THEORY OF RELATIVITY	21	
Introduction	21	
Inertial Frame of Reference	21	
Galilean Transformations	21	
Velocity of Light	22	
The Search for the Ether	22	
Michelson–Morley Experiment	23	
Lorentz and Fitzgerald Hypothesis	25	
Illustrative Examples	25	
Einstein's Special Theory of Relativity	26	
Lorentz Transformations	27	
Consequences of Lorentz Transformation	29	
Length Contraction	29	
Time Dilation	30	
Proper Frame, Proper Length and Proper Time	30	
Experimental Verification of Time Dilation	31	
μ -Meson Decay	31	
Relativistic Velocity Transformation		
Equations	34	
Relativistic Momentum	36	
Relativity of Mass	37	
Mass–Energy Equivalence	40	
Relation between Momentum and Energy	41	
Particles with Zero Rest Mass	42	
Speed Limit for Material Particles	42	
Space and Time in Relativity	42	
Intervals	42	
Review Questions	43	
Problems	44	
Short Answer Questions	45	
Objective Questions	45	
Multiple Choice Questions	46	
3. WAVES	47	
Introduction	47	
Types of Waves	47	
Transverse Waves	47	
Longitudinal Waves	47	

Periodic Waves of Constant Type	48	Fresnel's Double Mirror	82
General Equation of Wave Motion	49	Interference Due to Division of Amplitude (Thin Films)	83
Transverse Waves in Stretched String	50	Interference in Thin Films	83
Longitudinal Waves in Gases—Pressure Variation for Plane Waves	51	Wedge-shaped Film	85
Superposition Principle	54	Newton's Rings	87
Reflection and Transmission of Waves	54	Michelson Interferometer	92
Reflection and Transmission of Transverse Waves on a String at the Discontinuity, i.e. at a Boundary between Two Strings, Reflection and Transmission Coefficients	54	Fabry–Perot Interferometer	95
Reflection and Transmission of the Energy of the Waves at the Boundary	56	Illustrative Examples	100
Reflection and Transmission of Longitudinal (Sound) Waves at a Boundary between Two Media	57	Review Questions	107
Standing Waves in Pipes	59	Problems	109
Standing Waves in a Closed Pipe	59	Short Answer Questions	111
Standing Waves in an Open Pipe	60	Objective Questions	111
Stationary Waves on a String	61	Multiple Choice Questions	112
Impedance Matching	62	5. DIFFRACTION	113
Bel and Decibel	63	Introduction	113
Illustrative Examples	64	Diffraction of Light Waves	113
Review Questions	65	Fresnel's Half Period Zones	115
Problems	66	Amplitude Due to a Zone	116
Short Answer Questions	66	Resultant Amplitude Due to Wave- front <i>ABCD</i>	116
Objective Questions	66	Explanation of Approximately Rectilinear Propagation of Light	117
Multiple Choice Questions	67	Zone Plate	117
4. NATURE OF LIGHT AND INTERFERENCE	68	Fresnel and Fraunhofer Diffraction	117
Nature of Light	68	Fresnel Class of Diffraction	118
The Corpuscular Theory	69	Fraunhofer Class of Diffraction	118
The Wave Theory	69	Diffraction at a Straight Edge	118
Wave–Particle Duality	69	Diffraction Bands Produced by a Straight Edge	118
The Electromagnetic Spectrum	70	Conditions for Maxima and Minima	119
Coherence	71	Fringe Width	120
Temporal Coherence	71	Intensity at a Point Inside the Geometrical Shadow	120
Spatial Coherence	71	Diffraction at a Circular Aperture	121
Coherence Time and Coherence Length	72	Intensity at the Axial Point	121
Principle of Superposition	73	Intensity at the Non-axial Points	122
Constructive Superposition	73	Diffraction Due to a Circular Obstacle	122
Destructive Superposition	73	Comparison of Fresnel Diffraction Patterns at a Circular Hole and Circular Obstacle	123
Interference	74	Fresnel Diffraction at a Circular Obstacle	123
Interference of Light	74	Fresnel Diffraction at a Circular Aperture	123
Young's Double Slit Experiment	75	Fraunhofer Diffraction at a Single Slit	123
Types of Interference	78	Positions of Maxima and Minima	124
Interference Due to Division of Wavefront	78	Effect of Width of Slit on Maxima	125
Fresnel's Biprism	78	Fraunhofer Diffraction at a Circular Aperture	125
Interference by Lloyd's Single Mirror	81	Fraunhofer Diffraction at a Double Slit	126
Comparison of Lloyd's Mirror and Biprism Experiment	82	Effect of Increasing the Distance between Slits	128
Achromatic Fringes	82		

Plane Transmission Diffraction Grating	128	Limitations of Nicol Prism as a Polarising Device	159
Theory	129	Uses of Nicols	160
Secondary Maxima and Minima	129	Elliptically and Circularly Polarised Light	160
Width of Principal Maxima	130	Theory	161
Oblique Incidence	130	Phase Retardation Plates	163
Condition for Absent Spectra	131	Quarter Wave Plate	164
Overlapping of Spectral Lines	132	Half Wave Plate	164
Determination of Wavelength of a Spectral Line Using Plane Transmission Grating	132	Production of Plane, Circularly and Elliptically Polarised Light	164
Determination of Grating Element	132	Plane Polarised Light	164
Determination of Angle of Diffraction	132	Circularly Polarised Light	165
Maximum Number of Order Available with a Grating	133	Elliptically Polarised Light	165
Dispersive Power of a Grating	133	Analysis or Detection of Plane, Circularly and Elliptically Polarised Light	166
Prism and Grating Spectrum	134	Optical Activity	167
Resolving Power of Optical Instruments	135	Dextrorotatory or Right-handed	167
Rayleigh's Criterion: Limit of Resolution	135	Laevorotatory or Left-handed	167
Resolving Power of a Telescope	136	Specific Rotation	168
Relation between Magnifying Power and Resolving Power of a Telescope	137	Molecular Rotation	168
Resolving Power of a Microscope	138	Polarimeters	168
Resolving Power of a Diffraction Grating	139	Laurent's Half Shade Polarimeter	168
Difference between Dispersive and Resolving Powers	140	Biquartz Polarimeter	170
Resolving Power of a Prism	140	Determination of Specific Rotation of Sugar	170
Spectrum	141	Illustrative Examples	171
Emission Spectra	141	Review Questions	175
Absorption Spectra	141	Problems	176
Division of Emission Spectra	141	Short Answer Questions	177
Division of Absorption Spectra	142	Objective Questions	178
Illustrative Examples	142	Multiple Choice Questions	178
Review Questions	148	7. LASER AND HOLOGRAPHY	179
Problems	150	Introduction	179
Short Answer Questions	151	Important Properties of Laser Light	179
Objective Questions	152	Laser Light is Highly Directional	179
Multiple Choice Questions	152	Laser Light is Highly Intense, i.e. It can be Sharply Focussed	180
6. POLARISATION	153	Laser Light is Highly Monochromatic	180
Introduction	153	Laser Light is Highly Coherent	180
Methods of Producing Plane Polarised Light	154	Einstein's Theory of Atomic Transitions and Einstein's <i>A</i> and <i>B</i> Coefficients	181
Polarisation by Reflection	155	Principle of Laser	183
Polarisation by Refraction—Pile of Plates	156	Population Inversion by Pumping	184
Degree of Polarisation	156	Optical Pumping	184
Law of Malus	156	Electrical Pumping	184
Polarisation by Double Refraction	156	Chemical Pumping	184
Calcite Crystal	157	Heat Pumping	184
Optic Axis	157	Optical Resonators	185
Principal Section	158	The Quality Factor (<i>Q</i>)	185
Principal Plane	158	Amplification of Light and Threshold Condition	186
Nicol Prism	158	Solid-state Lasers	187
Construction of Nicol	158	Ruby Laser	187
Action of Nicol Prism	159		

Semiconductor (P-N Junction) Lasers	189	Losses in Optical Fibre Cable	224
Population Inversion in Semiconductor Laser	190	Attenuation in Optical Fibres	224
Gas Lasers	191	Optical Fibre Communication System	225
Carbon Dioxide Laser	193	Photodetector	226
Chemical Lasers	193	Photodiode Mechanism	226
Dye Lasers	194	Quantum Efficiency (η) and Responsivity (R)	227
Nd: YAG Laser	194	Long Wavelength Cut-off	228
Construction	195	Optical Fibre Cable Construction	228
Working	195	Cable Construction	229
Quantum Well Laser (QWL)	195	Fibre Optic Sensors	229
Vertical-cavity Surface-emitting Laser (VCSEL)	196	Optical Fibre Endoscope	232
Quantum Dot Lasers	197	Applications of Optical Fibres	233
Applications of Lasers	197	Communication	233
Medicine	197	Scanning	233
Optical Communication	198	Use in Medical Instruments	233
Defence	198	Coupler	233
Mechanical Industry	199	Display and Illumination	233
Electronic Industry	200	Transfer of Energy	233
Consumer Electronic Industry	200	Illustrative Examples	233
Nuclear Energy	201	Review Questions	237
Holography	202	Problems	237
Fundamental Research	202	Short Answer Questions	238
Holography	203	Objective Questions	239
Introduction	203	Multiple Choice Questions	239
Theory	204		
Reconstruction	205	9. ACOUSTICS	241
Some Important Properties of a Hologram	206	Introduction	241
Applications of Holography	207	Architectural Acoustics	241
Illustrative Examples	207	Reverbatation	241
Review Questions	210	Derivation for Reverbatation Time	242
Problems	211	Sabine's Reverbatation Time Formula	244
Short Answer Questions	212	Eyring's Formula	246
Objective Questions	212	Absorption Coefficient	247
Multiple Choice Questions	212	Measurement of Absorption Coefficient	247
8. FIBRE OPTICS	214	Acoustic Design	249
Introduction	214	Reverbatation	249
Total Internal Reflection	214	Adequate Loudness	249
The Optical Fibre	215	Shape and Size of the Auditorium	250
Classification of Fibres	217	Absence of Echoes	250
Stepped Index Multimode Fibre	217	Absence of Echelon Effect	250
Stepped Index Monomode Fibre	218	Freedom or Insulation from Noise	250
Graded Index Multimode Optical Fibre	218	Freedom from Resonance	251
Advantages of Optical Fibres	220	Acoustical Materials	251
Disadvantages of Optical Fibre Systems	221	Illustrative Examples	251
Types of Rays	221	Review Questions	255
Skew Rays	221	Problems	255
Modes of Propagation in Optical Fibre	221	Short Answer Questions	255
Dispersion—Intermodal Dispersion	223	Objective Questions	256
For Multimode Stepped Index Fibre	223	Multiple Choice Questions	256
For Graded Index Multimode Fibre	224	10. ULTRASONICS	257
		Introduction	257
		Production of Ultrasonic Waves	257
		Galton's Whistle	258

Magnetostriction Oscillator	258	Magnetic Circuit	302
Piezoelectric Method	260	Comparison of Magnetic and Electric	
Detection of Ultrasonics	263	Circuits	302
Piezoelectric Detector	263	Magnetomotive Force (mmf), Reluctance and	
Kundt's Tube Method	263	Permeance	302
Acoustic Diffraction Method	263	Reluctance in Series and Parallel	303
Thermal Detectors	264	Rowland Ring	303
Sensitive Flame Method	264	Vector Model of an Atom	304
Smoke Method	264	Gyromagnetic Ratio	304
Properties of Ultrasonics	265	The Bohr Magneton	305
Applications of Ultrasonics	265	The Spinning Electron	305
Communication	265	Stern–Gerlach Experiment	307
Industrial Applications	266	Illustrative Examples	309
Scientific Applications	267	Review Questions	311
Medical and Biological Applications	267	Problems	312
PZT (Lead Zirconate Titanate Base) Ceramics	268	Short Answer Questions	312
Ultrasonic Transducer	269	Objective Questions	313
Illustrative Examples	269	Multiple Choice Questions	313
Review Questions	271		
Problems	272	12. ELECTROSTATICS AND	
Short Answer Questions	272	ELECTROMAGNETISM	315
Objective Questions	273	Electrostatics	315
Multiple Choice Questions	273	Introduction	315
11. MAGNETISM AND MAGNETIC		Coulomb's Law	315
MATERIALS	274	Electric Field	317
Magnetism	274	Principle of Superposition	318
Terminology	275	Dirac Delta Function	319
Magnetic Induction or Magnetic Flux		Lines and Tubes of Force	319
Density (B)	275	Electric Flux	320
Magnetic Field (H)	275	Solid Angle	321
Magnetization	275	Gauss's Law for the Electric Field	
Magnetic Susceptibility (χ)	275	(Integral Form)	322
Intensity of Magnetization (I)	275	Gauss's Law for the Electric Field	
Intensity of Magnetization (I) and		(Differential Form)	323
Susceptibility (χ)	276	Applications of Gauss's Law	324
Magnetic Dipoles	276	Field Due to an Infinite Layer of Positive	
Origin of Magnetic Moments	277	Charge with Uniform Surface	
Classification of Magnetic Materials	277	Density (σ)	324
Diamagnetism	278	Field Outside an Isolated Charged Sphere	325
Paramagnetism	281	Electric Field Due to a Spherical Shell of	
Ferromagnetism	284	Charge	325
Antiferromagnetism	289	Electric Field Strength at an Internal	
Ferrimagnetism	290	Point	325
Magnetostriction	291	Electric Field Strength Due to Uniformly	
The Influence of Temperature on Magnetic		Charged Infinite Cylinder	326
Behaviour of Magnetic Materials	291	Electrostatic Field between Two	
Domains and Hysteresis	292	Concentric Spheres with Equal and	
Energy Loss Due to Hysteresis	294	Opposite Charges	327
Soft Magnetic Materials	297	Electrostatic Potential	327
Hard Magnetic Materials	299	Relation between Electric Field Strength	
Conventional Hard Magnetic Materials	299	and Potential	329
High-energy Hard Magnetic Materials	300	Equipotential Surfaces	331
Magnetic Storage	300	Electrostatic Energy	332

Electromagnetism	333	14. THERMOELECTRICITY	373
Introduction	333	Seebeck Effect	373
Displacement Current	333	Explanation of Seebeck Effect	373
Total Current	334	Thermoelectric Series	374
Continuity Equation	334	Variation of Thermoelectric Emf with	
Gauss's Theorem Applied to Electrostatics	335	Temperature	374
Biot–Savart Law	335	Seebeck Coefficients	375
Faraday's Law of Induction	336	Law of Successive Temperatures	375
Ampere's Law for Magnetomotive Force	337	Law of Intermediate Metals or Successive	
Maxwell's Equations	338	Contacts	376
Maxwell's Equations Under Static		Thermoelectric Power	376
Conditions	339	Practical Applications	377
More About Maxwell's Equations	340	Thermoelectric Thermometer	377
Electromagnetic Waves	341	Thermistor	378
Plane Waves in a Dielectric	342	Characteristic Curve	379
Relation between E and H	343	Advantages of Thermistors	379
The Wave Equation in a Conducting		Illustrative Examples	380
Medium	343	Review Questions	380
The Poynting Vector	345	Problems	381
Illustrative Examples	346	Short Answer Questions	382
Review Questions	350	Objective Questions	382
Problems	351	Multiple Choice Questions	382
Short Answer Questions	352	15. MOTION OF CHARGED PARTICLES IN	
Objective Questions	352	ELECTRIC AND MAGNETIC FIELDS	383
Multiple Choice Questions	352	Introduction	383
13. SCALAR AND VECTOR FIELDS	354	Motion of a Charged Particle in a Parallel	
Fields	354	Electric Field	383
Scalar Fields	354	Motion of Electron in Transverse Electric	
Vector Fields	354	Field	384
Partial Derivative	355	Motion of a Charged Particle (Electron) in	
Gradient of a Scalar Function	356	Transverse Magnetic Field	385
The Gradient of a Scalar Field in		Motion of a Charged Particle in Crossed	
Rectangular Cartesian Coordinates	357	Electric and Magnetic Fields	386
Line Integral of Vector Field	358	Thomson's Method for Measuring e/m	
Surface Integral	359	Ratio for Electron	387
Volume Integral	359	Vertical Deflection Due to Electric and	
Divergence of a Vector Field	359	Magnetic Fields	387
Physical Meaning of Divergence of a		Electron Deflection Sensitivity	388
Vector ($\nabla \cdot A$)	360	Vertical Deflection Due to Perpendicular	
Gauss's Divergence Theorem	361	Magnetic Field of Magnetic	
The Laplacian Operator	362	Induction B	388
Poisson's and Laplace's Equations	362	Magnetostatic Deflection Sensitivity	388
The Curl of a Vector Function	363	Aston's Mass Spectrograph	388
Curl in Cartesian Coordinates	363	Principle	388
Stoke's Curl Theorem	364	Theory	388
Physical Meaning of Curl of a Vector Field	365	Cathode Ray Oscilloscope (CRO)	390
Green's Theorem	366	Basic CRO Construction and Operation	390
Illustrative Examples	367	Sweep Generator	393
Review Questions	371	CRO Probes	394
Problems	371	Applications of Oscilloscopes	394
Short Answer Questions	372	Voltage Measurement	394
Objective Questions	372	Period and Frequency Measurement	394
Multiple Choice Questions	372		

Determination of Frequency with Lissajous Figure	395	Ionic Bond	421
Computation of Phase Angles	395	Potential Energy Diagram of the Ionic Molecule	423
Illustrative Examples	396	Binding Energy of Ionic Crystal	423
Review Questions	397	Madelung Constant for a Linear Chain Ionic Solid	424
Problems	398	Determination of the Repulsive Exponent	425
Objective Questions	398	Covalent Bonding	427
Multiple Choice Questions	398	Metallic Bonding	427
16. CRYSTALLOGRAPHY AND CRYSTAL IMPERFECTIONS	399	How to Predict Predominance of Metallic or Covalent Bond	429
Introduction	399	Molecular or van der Waals Bonding	430
Periodic Array of Atoms: Space lattice, Basis Unit Cell	399	Hydrogen Bonding	430
Crystal Lattice and Lattice Translation Vectors	400	Illustrative Examples	431
Seven Systems of Crystals	402	Glimpses	436
Bravais Lattices	403	Review Questions	437
Example of Crystal Structure: Calculation of Lattice Points Per Unit Cell	403	Problems	437
Coordination Number (CN)	404	Short Answer Questions	438
Lattice Constant	405	Multiple Choice Questions	439
Atomic Radius	405	18. X-RAYS	441
Crystal or Lattice Planes and Miller Indices	406	Introduction	441
Spacing of Planes in Crystal Lattices	408	Production of X-rays: Coolidge Tube	441
Spacing of Lattice Plane in the <i>bcc</i> Lattice	409	Properties of X-rays	442
Spacing of Lattice Plane in <i>fcc</i> Lattice	409	Measurement of the Intensity of X-rays	442
Density of Lattice Points or Packing Fraction in a Miller Plane	409	Variation of the X-ray Intensity with Wavelength (Continuous and Characteristic X-rays)	443
Density of Lattice Points in a Lattice Plane	410	Origin of Continuous Spectrum	444
Defects or Imperfections in Crystals	410	Origin of the Characteristic X-rays Spectrum (X-rays Peaks)	445
Point Imperfections	410	Fine Structure of X-ray Lines	447
Phonon	411	Auger Transitions	448
Line Defects or Dislocations	411	Moseley's Law	448
Surface and Grain Boundary Defects	412	Absorption of X-rays	449
Volume Imperfection	412	Scattering of X-rays	450
Crystal Structures	413	Scattered X-rays	450
Sodium Chloride (NaCl)	413	Characteristic X-rays	450
Diamond Structure	413	Scattered β -rays	451
Illustrative Examples	413	Characteristic β -rays	451
Review Questions	416	X-ray Diffraction and Crystal as Three Dimensional Grating	451
Problems	416	Laue Experiment	451
Short Answer Questions	417	Bragg's Law	451
Objective Questions	417	Bragg's X-ray Spectrometer	452
Multiple Choice Questions	418	Determination of Wavelength	453
17. BONDING IN SOLIDS (CRYSTAL BONDING)	419	Illustrative Examples	454
Introduction	419	Review Questions	455
Bonding in Crystals	419	Problems	456
Stability of the Solid	421	Short Answer Questions	457
		Objective Questions	457
		Multiple Choice Questions	457

19. QUANTUM MECHANICS	459		
Introduction	459		
Blackbody Radiations	459		
Spectral Distribution of Energy in the Blackbody Radiation	459		
Planck's Law of Radiation	460		
Photoelectric Effect	463		
Experimental Arrangement to Study the Photoelectric Effect	464		
Einstein's Photoelectric Equation	466		
Compton Effect	468		
Theory	468		
Direction of Recoil Electron	469		
Kinetic Energy of Recoil Electron	470		
Experimental Verification of Compton Effect	470		
Comparison of Compton Effect and Photoelectric Effect	471		
Matter Waves	471		
de Broglie Matter Waves	471		
de Broglie Wavelength of Matter Waves	472		
The Davisson and Germer Experiment	473		
GP Thomson's Experiment	474		
Properties of Matter Waves	475		
The Uncertainty Principle	476		
Experimental Illustrations	477		
Localization Experiment (γ -ray Microscope)	477		
Determination of Position of a Particle Using a Single Slit	478		
Applications of Uncertainty Principle	479		
Ground State Energy of H Atom	480		
Ground State Energy of Harmonic Oscillator	481		
Natural Width of Spectral Line	481		
Schrodinger's Wave Mechanics	482		
Wave Equation	482		
Wave Function	482		
Schrodinger Time Dependent Wave Equation	484		
Schrodinger Time Independent Wave Equation	485		
Probability Current Density	487		
Simple Solutions of Schrodinger Equation	488		
Schrodinger Equation and Stationary State Solution	489		
Boundary and Continuity Conditions on the Wave Functions	490		
Free Particle System	491		
Particle in Bound States	492		
Particle in One Dimensional Box	492		
Particle in a Rectangular Three Dimensional Box	497		
Potential Step (Single Step) Barrier	501		
		The Rectangular Potential Barrier: Penetration of a Barrier: The Tunnel Effect	505
		Illustrative Examples	511
		Problems	519
		Short Answer Questions	524
		Objective Questions	526
		Multiple Choice Questions	526
20. FREE ELECTRON THEORY OF METALS	529		
Introduction	529		
Drude-Lorentz Theory	529		
Fermi-Dirac Distribution Function	530		
Sommerfeld Free Electron Model	531		
Free Electron Gas in One Dimensional Box	532		
Free Electron Gas in Three Dimensions	534		
Applications of the Free Electron Gas Model	536		
Electronic Specific Heat of Metals	536		
Illustrative Examples	537		
Review Questions	538		
Short Answer Questions	538		
Objective Questions	539		
Multiple Choice Questions	539		
21. SEMICONDUCTORS AND APPLICATIONS	540		
Introduction	540		
Intrinsic Semiconductors	542		
Effective Mass	544		
Recombination of Electrons and Holes	545		
Intrinsic Conductivity	545		
Extrinsic Semiconductors	546		
N-type Semiconductors	547		
P-type Semiconductors	548		
Effect of Temperature	549		
Effect of Doping on Electrical Conductivity	549		
Charge Carrier Densities in Extrinsic Semiconductors	549		
Donor and Acceptor States	550		
Fermi Level in Extrinsic Semiconductor	550		
Thermal Ionization of Extrinsic Semiconductors	551		
Charge Densities in Extrinsic Semiconductors	552		
Semiconductor Devices	552		
P-N Junction	552		
Forward and Reverse Biasing	555		
Rectifiers	558		
Zener Diodes	563		
Constant Current Diodes	564		
Tunnel Diode	564		
Tunnel Effect	565		

Photodiode	565	Characteristic Phenomenological Parameters	600
Principle	565	Flux Quantization	601
Working	565	Critical Temperature (T_c)	601
Applications	566	Josephson Effects	602
Solar Cells	566	Josephson Junctions	602
Photovoltaic Effect and Solar Cells	566	Properties of HTSC Oxides	602
Light-emitting Diode (LED)	566	Thermodynamics of a Superconductor	603
Liquid Crystal Display (LCD)	567	Theory of Superconductivity	604
Thermistors and Barretters	567	Microscopic BCS Theory	606
Gunn Effect and Gunn Diode	567	Quantum Tunneling	608
IMPATT, TRAPATT and Qwitt Diodes	568	Applications of Superconductivity	609
Pin Diodes	569	Magnets	609
Transistor	569	Electrical Equipment	610
Junction Transistor	569	Electronics	611
Transistor Action	570	Medical Diagnostics	612
Action of Transistor as Amplifier	572	Nondestructive Testing	613
Three Transistor Configurations	573	Particle and Photon Detectors	613
Characteristic Curves of a Transistor	573	Magnetic Levitation	613
Field Effect Transistor (FET)	576	Illustrative Examples	616
Metal Oxide Semiconductor Field Effect Transistor (MOSFET)	577	Review Questions	618
Semiconductors in Computers	578	Problems	618
Microelectronic Circuits	578	Short Answer Questions	619
Microelectromechanical Systems (MEMSs)	579	Objective Questions	619
Quantum Dots (QDs)	580	Multiple Choice Questions	619
Spintronics	580	23. DIELECTRICS	621
Illustrative Examples	581	Introduction	621
Review Questions	583	Dielectric Constant	622
Problems	583	Energy Stored in a Capacitor	624
Short Answer Questions	584	Induced Charges	624
Objective Questions	584	Polarisation	625
Multiple Choice Questions	584	Relation between E , P and D	626
22. SUPERCONDUCTIVITY	587	Induced Dipoles	626
Introduction	587	Permanent Dipoles	628
Superconducting Materials	589	Phase Difference and Electric Loss	628
Superconducting Elements	589	Dielectric Strength	629
Binary Alloys and Compounds	589	Power Factor	630
Intermetallic Compounds	590	Polar and Non-polar Materials	630
HTSC Cuprate Materials Characteristics	593	Non-polar Materials	631
Characteristic Properties of Superconductors	595	Polarization	631
Zero Resistivity, i.e. Infinite Conductivity ($\rho = 0$ for all $T < T_c$)	595	Total Polarization	634
Persistent Current	596	Internal Field in Solids	635
Meissner–Ochsenfeld Effect ($B = 0$ Inside the Superconductor)	596	Clausius–Mossotti Relation	636
Thermal Properties of Superconductors	597	Frequency Dependence of Total Polarizability	636
Acoustic Attenuation	598	Frequency Dependence of the Dielectric Constant	637
High Frequency Electromagnetic Properties	598	Insulation Resistance	638
The Energy Gap	599	Classification of Dielectrics	638
Isotope Effect	599	Ferroelectrics	638
Mechanical Effects	600	Electrostriction	641
Absence of Effects	600	Piezoelectricity or Pressure Electricity	641
		Uses of Dielectrics	642

Illustrative Examples	642	Nuclear Reactions and Q Value	678
Review Questions	645	Artificial Transmutation or Artificial	
Problems	646	Disintegration	679
Short Answer Questions	646	Rutherford's Experiment for Artificial	
Objective Questions	647	Disintegration	679
Multiple Choice Questions	648	Artificial Radioactivity	679
24. DIGITAL ELECTRONICS	649	Radioisotopes	681
Introduction	649	Radioisotopes of Transuranium Elements	681
Digital Electronics	650	Use of Radioisotopes	681
Binary Number System	651	Nuclear Reactions	684
Logic Designation	652	Reactions Induced by α -particles	684
Logic Gates	652	Reactions Induced by Protons	684
AND Gate	652	Transmutation by Deuterons	685
OR Gate	653	Transmutation by Neutrons	685
NOT Gate	653	Transmutation by Photon (Photo	
Combining Logic Gates	653	Disintegration)	685
Boolean Algebra	655	Nuclear Fission	686
Basic Laws of Boolean Algebra	655	Theory of Nuclear Fission	687
Rules for Boolean Algebra	656	Fission Products	688
Illustrative Examples	656	Energy Released in Nuclear Fission	688
Review Questions	657	Nuclear Fission as a Source of Energy	689
Short Answer Questions	658	Nuclear Reactor or Nuclear Pile	690
25. NUCLEAR PHYSICS (ATOMIC NUCLEUS	660	Critical Size for Nuclear Reactor	691
AND RELATED PHENOMENA)		Thermal Power Nuclear Reactor	694
Atomic Nucleus (The Nucleus as a Part		Fast Breeder Reactors	694
of the Atom)	660	Nuclear Reactor Problems	695
Atomic Number, Mass Number and Isotopes	661	Nuclear Fusion and Thermonuclear	
Size and Shapes of Nuclei	662	Reactions	695
Intrinsic Spin	662	The Source of Stellar Energy: Stellar	
Intrinsic Magnetic Moment	662	Thermonuclear Reaction	696
Nuclear Binding Energy	663	Carbon–Nitrogen Cycle or Carbon Cycle	698
Binding Energy	663	Comparison between Fission and Fusion	698
The Deuteron (${}^2_1\text{H}$)	665	Nuclear Detectors	698
Radioactivity	666	Ionization Chamber	700
Natural Radioactivity	666	Proportional Counter	701
Radioactive Decay or Disintegration	666	Geiger–Muller (GM) Counter or GM	
Laws of Radioactive Disintegration	667	Tube	701
Half-life	668	Particle Accelerators	703
Average Life (τ) or Mean Life of a		Cyclotron	703
Radioactive Atom	669	Betatron	705
Units of Radioactivity	669	Illustrative Examples	708
Alpha, Beta and Gamma Decay	669	Glimpses	712
Alpha Decay (α -decay)	669	Review Questions	714
Beta Decay (β -decay)	671	Problems	715
Electron Capture	672	Short Answer Questions	715
Gamma Decay (γ -decay)	673	Objective Questions	717
Nuclear Force	673	Multiple Choice Questions	718
Stable Nuclei or Nuclear Stability	675	26. NANOMATERIALS	720
Nuclear Models	677	Introduction	720
Liquid Drop Model	677	Nanoscale Miracles	721
Nuclear Shell Model	678	Study of Nanoscale Materials	724
Collective Model	678	Transmission Electron Microscope (TEM)	724
		Scanning Electron Microscope (SEM)	726

Quantum Dots	727	Various Forms of Carbon Nanotubes	743
Quantum Wire or Nanowire	728	Chemistry of Carbon Nanotubes	744
Conductivity of Nanowires	728	Oriented or Localized Growth	745
Uses of Nanowires	729	Electromechanical Properties	746
Modelling of Quantum Size Effect	729	Basic Mechanical Properties	746
Surface and Interface Effects	730	Defects in Carbon Nanotubes	747
Properties of Nanomaterials	731	Carbon Nanotubes as Mechanical	
Optical Properties	731	Oscillators	747
Electrical Properties	732	Electronic Structure and Properties	748
Large Electrochromic Display Devices	732	STM Imaging and Spectroscopy	749
Chemical Properties	732	Experimental Studies: Raman Spectroscopy	750
Mechanical Properties	732	Optical Properties	750
Magnetic Properties	734	Electronic Transport Properties	751
Melting Temperature	735	Bulk Transport	751
Structural Properties	735	Carbon Nanocones	751
Preparation of Nanoscale Materials	736	Production Methods for CNTs	752
Top–Down Approach	736	Key Issues in Nanomanufacturing	753
Bottom–Up Approach	736	Nanostructures in Motion	753
Chemical Methods	737	Nanomaterial Advantage	753
Physical Methods	738	Applications of Nanotechnology	754
Biological Nanomaterials Biomimicking	738	Limitations of Nanotechnology	755
Microelectromechanical Systems		Glimpses	756
(MEMSs)	739	Review Questions	756
Nanoelectromechanical Systems		Short Answer Questions	757
(NEMSs)	739	Objective Questions	759
Carbon Nanotubes (CNTs)	740	Multiple Choice Questions	759
