

Contents at a Glance

Volume 1

1. Classical and Vector Models of Atom
2. Origin of the Quantum Theory
3. Fundamentals of Wave Mechanics
4. Wave Mechanical Model of Atom
5. Atomic Nucleus and its Structure
6. Radioactivity and Radiation Chemistry
7. Nuclear Reaction
8. Periodic Table and Periodic Trends of Different Properties of Elements

Volume 2

9. Introduction to Chemical Bonding and Theories of Covalence—Valence Bond Theory (VBT) and Molecular Orbital Theory (MOT)
10. Covalent Compounds—Characteristics, Structure and Reactivity
11. Hydrogen Bonding and Other Weaker Chemical Forces Including Supramolecular Systems

Volume 3A

12. Structure, Bonding and Properties of Ionic Solids and Solid State Chemistry
13. Bonding in Metals and Metal Clusters—Electrical Conductivities of Solids: Semiconductors and Superconductors
14. Acids and Bases and Ionic Equilibria in Aqueous Solutions

Volume 3B

15. Nonaqueous Solvents
16. Redox Systems and Electrode Potential—Application of Electrode Potential: Electroanalytical Techniques
17. Metallurgy: Principles, Pyrometallurgy vs Hydrometallurgy—Extraction and Purification of Metals, Physicochemical Methods of Separation of Metals

Volume 5

1. Metal Complexes
2. Reaction Mechanism (Ligand Substitution)
3. Isomerism
4. Racemisation
5. Electron Transfer and Photochemical Reactions
6. Electronic Spectra

Volume 6

1. Magnetochemistry and Magnetic Properties of Metal Complexes
2. Structure, Bonding and Reactivities of Organometallics including Metal Carbonyls and Nitrosyls
3. Organometallics as Catalysts

Volume 7

1. Application of Metal Complexes in Analytical Chemistry and other Fields
2. Theory and Applications of Spectroscopic Methods (IR, Raman, NMR, ESR, Mossbauer, NQR, Mass Spectrometry, UV-VIS-PES)

Contents

<i>Preface to the Second Edition</i>	<i>vii</i>
<i>Preface to the First Edition</i>	<i>ix</i>
1. Introduction and Language of the Chemistry of Complex Compounds	1
1.1 Discovery and Historical Background	1
1.2 Properties of Cobalt-Ammines	3
1.3 Blomstrand-Jorgensen's Chain Theory of Metal-Ammine Compounds	5
1.4 Werner's Theory of Coordination Compounds	6
Basic Postulates of Werner's Coordination Theory; Characteristic Features of the Primary and Secondary Valencies; Formulation of the Cobalt(III)-Ammine Complexes by Werner's Theory; Formulation of a Series of Platinum(IV)-Ammine Complexes by Werner's Theory; Stereochemical Aspects of Coordination Compounds and Werner's Theory; Definitions of the Terms: Complex, Ligand and Coordination Number (CN); Defects of Werner's Theory	
1.5 Double Salts and Complex Salts: Perfect and Imperfect Complexes	23
1.6 Definition of Inner Sphere Complex, Outer Sphere Complex and Second Coordination Sphere Complex (i.e. Supercomplex)	27
1.7 Classification of Ligands	29
Classification of Ligands Based on the Nature of Metal-Ligand Bonding; Classification of the Ligands Based on the Number of Donor Sites and Coordinating Behaviour; Definitions of Some Special Types of Ligands and Illustration; Coordinating Behaviour of Some Specific Ligands; Fullerenes as Ligands	
1.8 Macrocyclic Ligands	73
1.9 Template Synthesis of Polydentate and Macrocyclic Ligands	78
1.10 Detection and Evidences of Complex Formation in Solution	88
1.11 Inner Metallic Complexes or Inner Complexes	98
1.12 Polynuclear or Bridged Complexes	102
1.13 Mixed Valence Complexes: Conjugated Bridges and Intervalence Charge Transfer (IVCT)	126
1.14 Coordination Polymers	128
1.15 Metal-Organic Framework (MOF) having the Ordered Mesoporous/Nanoporous Structure	131
1.16 Synthesis of Some Representative Coordination Complexes	136
Background Chemistry of Synthesis of Co(III)-Ammine and Co(III)-Pentaammine Complexes, $[\text{Co}^{\text{III}}(\text{NH}_3)_5\text{L}]^{2+}$; Hexaamminecobalt(III) chloride, $[\text{Co}(\text{NH}_3)_6]\text{Cl}_3$; Pentaamminechloridocobalt(III) chloride, $[\text{Co}(\text{NH}_3)_5\text{Cl}]\text{Cl}_2$; Pentaammineaquacobalt(III) chloride, $[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]\text{Cl}_3$; Pentaammine-nitrito(κ -O)cobalt(III) chloride, $[\text{Co}(\text{NH}_3)_5(\text{ONO})]\text{Cl}_2$; Pentaamminenitrito(κ -N)cobalt(III) chloride, $[\text{Co}(\text{NH}_3)_5(\text{NO}_2)]\text{Cl}_2$; Azidopentaamminecobalt(III) chloride $[\text{Co}(\text{NH}_3)_5(\text{N}_3)]\text{Cl}_2$; Sodium Hexanitrito- κ N-cobalt(III) (<i>i.e.</i> sodium cobaltinitrite, $\text{Na}_3[\text{Co}(\text{NO}_2)_6]$; <i>Trans</i> - and <i>cis</i> -Isomers of Dichloridobis(ethylenediamine)cobalt(III) chloride,	

<i>trans-cis</i> -[CoCl ₂ (en) ₂]Cl; Tetraammine-carbonatocobalt(III) nitrate, [Co(NH ₃) ₄ (CO ₃)]NO ₃ , <i>i.e.</i> [Co(CO ₃)(NH ₃) ₄]NO ₃ ; <i>Tris</i> (acetylaceto-nato)cobalt(III), [Co(acac) ₃]; <i>Tris</i> (ethylenediamine)cobalt(III) chloride, [Co(en) ₃]Cl ₃ ; <i>Tris</i> (acetylacetonato)chromium(III), [Cr(acac) ₃], <i>i.e.</i> [Cr(C ₅ H ₇ O ₂) ₃]; Potassium <i>tris</i> (oxalato)chromate(III) trihydrate, K ₃ [Cr(C ₂ O ₄) ₃]·3H ₂ O; Potassium <i>cis</i> -[(diaquabis(oxalato)chromate(III)) dihydrate K[<i>cis</i> -Cr(ox ₂)(OH ₂) ₂]·2H ₂ O and Potassium <i>trans</i> -[diaquabis(oxalato)chromate(III)] trihydrate, K[<i>trans</i> -Cr(ox ₂)(OH ₂) ₂]·3H ₂ O; Reinecke's salt, NH ₄ [Cr(NH ₃) ₂ (NCS) ₄]·H ₂ O; Potassium hexathiocyanato(κ-N)chromate(III), K ₃ [Cr(NCS) ₆]·4H ₂ O; Potassium <i>tris</i> (oxalato)ferrate(III), K ₃ [Fe(C ₂ O ₄) ₃]·3H ₂ O; <i>Tris</i> (acetylacetonato)iron(III), [Fe(acac) ₃]; Hexaamminenickel(II) chloride [Ni(NH ₃) ₆]Cl ₂ ; <i>Tris</i> (ethylenediamine)nickel(II) chloride dihydrate, [Ni(en) ₃]Cl ₂ ·2H ₂ O; <i>Tris</i> (ethylenediamine)nickel(II) thiosulfate, [Ni(en) ₃]S ₂ O ₃ ; <i>Trans</i> -diaquabis(glycinato-κ ² NO)nickel(II), <i>trans</i> -[Ni(gly) ₂ (OH ₂) ₂]; Tetraamminecopper(II) sulfate monohydrate, [Cu(NH ₃) ₄]SO ₄ ·H ₂ O (more correctly, [Cu(NH ₃) ₄ (OH ₂)]SO ₄ , <i>i.e.</i> aquatetraamminecopper(II) sulfate; <i>Bis</i> (acetylacetonato)copper(II), [Cu(acac) ₂]; <i>cis-bis</i> (glycinato-κ ² N, O)copper(II) monohydrate, <i>cis</i> -[Cu(gly) ₂]·H ₂ O and <i>trans-cis</i> (glycinato-κ ² N, O) copper (II) Monohydrate, <i>trans</i> -[Cu(gly) ₂]·H ₂ O; Illustration of Thermodynamic and Kinetic Control of Crystallisation; Controlled Synthesis of Two Copper(II) Oxalate Hydrates, K ₂ [Cu(C ₂ O ₄) ₂]·2H ₂ O (Dihydrate) and K ₂ [Cu(C ₂ O ₄) ₂]·4H ₂ O (Tetrahydrate): Kinetic vs. Thermodynamic Control of Crystallisation (<i>cf.</i> Crystallisation of <i>cis</i> -[Cu(gly) ₂]·H ₂ O and <i>trans</i> -[Cu(gly) ₂]·H ₂ O; <i>Bis</i> (biguanide)copper(II) chloride, [Cu(bigH) ₂]Cl ₂ ·2H ₂ O; <i>Bis</i> (acetylacetonato)oxidovanadium(IV), [V(acac) ₂ O]; Potassium <i>tris</i> (oxalato)aluminate(III) trihydrate, K ₃ [Al(C ₂ O ₄) ₃]·3H ₂ O; Synthesis of Ni(II) Complexes through Ligand Exchange Reaction Starting from [Ni(OH ₂) ₆] ²⁺ : One-Pot Synthesis	
1.17 Synthesis of Double Salts	180
Potash Alum (Aluminium Potassium Sulfate), K ₂ SO ₄ ·Al ₂ (SO ₄) ₃ ·24H ₂ O, <i>i.e.</i> KAl(SO ₄) ₂ ·12H ₂ O (dodecahydrate); Chrome Alum (Chromium Potassium Sulfate), K ₂ (SO ₄)·Cr ₂ (SO ₄) ₂ ·24H ₂ O, <i>i.e.</i> KCr(SO ₄) ₂ ·12H ₂ O (dodecahydrate); Ferrous Ammonium Sulfate (Mohr's Salt), (NH ₄) ₂ SO ₄ ·FeSO ₄ ·6H ₂ O	
1.18 Formula Representation and Nomenclature of Coordination Compounds	184
Abbreviations of Some Organic Ligands Commonly used; Formula Representation of Coordination Compounds (IUPAC 2005); Naming of the Mononuclear Coordination Compounds; Names and Formulae of the Dinuclear and Polynuclear Complexes with Bridging Ligands and Metal-Metal Bonds; Descriptions of Configuration of the Mononuclear Complexes (<i>i.e.</i> Coordination Entities)	
Exercise I	208
2. Stereochemistry and Structural Aspects of Complex Compounds	218
2.1 Isomerism in Coordination Compounds and Different Types of Isomerism	218
2.2 Structural Isomerism	219
Ionisation Isomerism; Hydration Isomerism; Coordination Isomerism; Ligand Isomerism; Linkage Isomerism; Factors Affecting the Relative Stabilities of the Linkage Isomers; Polymerisation Isomerism; Some Special Types of Structural Isomerism — Summation Isomerism and Valence Isomerism	
2.3 Conformational Isomerism	242
2.4 Stereoisomerism in Coordination Compounds	247
Concept of Stereoisomerism; Concept of Geometric Isomerism	
2.5 Geometric Isomerism in Coordination Compounds	258
Geometric Isomerism in the Complexes of Coordination Number Four; Geometric Isomerism in the Square Pyramidal Complexes of Coordination Number Five; Geometric Isomers in the Octahedral Complexes; Determination of Configuration of Geometrical Isomers (<i>i.e.</i> <i>cis-trans</i> Isomers)	
2.6 Enumeration of Total Number of Stereo-Isomers in the Octahedral Complexes	268
2.7 Characteristics of the Optical or Mirror Image Isomers	270
2.8 Optical Isomerism in the 4-, 5- and 6-Coordination Compounds	287
Crystal Field and Ligand Field Theories: Splitting of the Metal Orbitals in Different Crystal Fields of Ligands	

2.9 Optical Activity from the Chelate Ring Conformation in Square Planar and Octahedral Complexes	303
2.10 Spin State Isomerism	303
2.11 Structure of Coordination Compounds and Stereochemical Aspects	303
Different Factors to Control the Stereochemical Preferences; The Possible Geometries for the Coordination Numbers 2 to 7; Examples of the Coordination Compounds of Coordination Number One; Examples of Coordination Number Two; Examples of Coordination Number Three; Examples of Coordination Number Four; Examples of Coordination Number Five; Examples of the Six Coordinate Complexes (Coordination Number Six); Examples of Seven Coordinate Complexes; Examples of Eight Coordinate Complexes (Coordination Number Eight); Coordination Number Higher than Eight	
Exercise II	351
3. Bonding Theories of Metal Complexes	360
3.1 Introduction	360
3.2 Electrostatic Theory of Bonding in Coordination Compounds	360
3.3 Sidgwick's Effective Atomic Number Rule: The 18-Electron Rule	362
Illustration of the EAN Rule; Exception of the EAN Rule (18e Rule) and Application of the 16e Rule; 18-Electron Rule in Organometallics; Applicability of the 18e Rule (<i>i.e.</i> EAN Rule) in Metal Carbonyls and Limitations of the Rule; Interpretation of the 18e and 16e Rule	
3.4 Valence Bond Theory (VBT) of Bonding in Coordination Compounds	372
Hybridization at the Metal Centre and Geometries of the Complexes; Octahedral Complexes in Terms of VBT; Square Planar Complexes in Terms of VBT; Tetrahedral Complexes in Terms of VBT; Conditions Favouring the Outer and Inner Orbital Complexes in Terms of VBT; Inner Orbital Complex Formation at the Cost of Excitations of $(n - 1)d$ Electron; Magnetic Criterion of the Bond Type; Electroneutrality Principle: Compensation of Negative Charge Accumulated on the Metal Centre in Terms of VBT; Limitations of VBT in Explaining the Bonding in Coordination Complexes	
3.5 Crystal Field and Ligand Field Theories: Splitting of the Metal Orbitals in Different Crystal Fields of Ligands	390
Basic Features of CFT and LFT; Effect of the Electrostatic Field of the Ligands on the Energies of the Metal Orbitals; Splitting of the Metal p - and d -Orbitals in a Linear Ligand Field; Splitting of the Orbitals in an Octahedral Ligand Field; Splitting of the d -Orbitals in a Tetrahedral Ligand Field; Crystal Field Splitting of the d -orbitals in a Square Planar Crystal Field; Crystal Field Splitting of the d -orbitals in a Square Pyramidal Geometry; Crystal Field Splitting of the d -orbitals in a Trigonal Bipyramidal Geometry; Crystal Field Splitting of the d -orbitals in 8-Coordinate Structures—Cubic, Square Antiprismatic (D_{4d}) and Dodecahedral (D_{2d}); Crystal Field Splitting of the d -orbitals in a Trigonal Prismatic (D_{3h}) Stereochemistry; Energy of the d -orbitals (<i>i.e.</i> d -orbital Energy) in Crystal Fields of Different Symmetries	
3.6 Factors Affecting the Crystal Field Splitting Parameter (Δ)	418
Effect of the Nature of Metal Centre on Δ in a Particular Stereochemistry; Effect of the Nature of the Ligands on Crystal Field Splitting Power (<i>i.e.</i> measured by Δ): Ligand Field Strength	
3.7 Pairing Energy and Factors Controlling the Pairing Energy	421
3.8 CFT and Octahedral Complexes	424
Crystal Field Stabilization Energy (CFSE) in Octahedral Systems: High-spin and Low-spin Complexes; Critical Crystal Field Strength (<i>i.e.</i> $\Delta_o \approx P$); Spin-state Equilibrium; Temperature Controlled Spin Isomerism in Octahedral Complexes	

3.9 CFT and the Tetrahedral Complexes	499
3.10 CFT and Trigonal Bipyramidal and Square Pyramidal Complexes	436
3.11 Tetragonal Distortion in the Octahedral Symmetry: Jahn-Teller Distortion in the Octahedral and Tetrahedral Complexes	438
Tetragonally Distorted Octahedrons and Crystal Field Splitting of the d-Orbitals; Distortion (z-out and z-in) in the Tetrahedral Complexes and Splitting of the d-Orbitals; Jahn-Teller Theorem and Jahn-Teller Distortion in the Octahedral and Tetrahedral Complexes; Examples of the Octahedral and Tetrahedral Complexes Experiencing the J.T. Distortion: Effect of the J.T. Distortion on Different Properties; Symmetrical Octahedral Structure in Spite of the J.T. Distortion: Static and Dynamic J.T. Distortion	
3.12 A Special Case of Jahn-Teller Distortion in the d⁸-Configuration	456
3.13 Crystal Field Theory of the Square Planar Geometry	458
3.14 Applications of CFT: Evidences in Favour of CFT	461
Magnetic Properties of the Coordination Compounds in Terms of CFT; Spectral Properties of the Coordination Compounds in Terms of CFT; Kinetic Properties of the Coordination Compounds in Terms of CFT; Contribution of CFSE to the Metal-ligand Bond Energy; Contribution of CFSE to the Metal-Ligand Stepwise Stability Constants; Contribution of CFSE to the Hydration Energies of Metal Ions; Contribution of CFSE to the Lattice Energy; Variation of the Octahedral Crystal Ionic Radii for the Transition Metal Ions; Variation of the Metal-Ligand Bond Distances in the Capped Octahedral System; Variation of Tetrahedral Ionic Radii for the Transition Metal Ions; Effect of Electron Occupancy in Different Orbitals on the Ionic Radii in other Geometries; Preferred Stereochemistry: Octahedral versus Tetrahedral (O _h vs. T _d); Stereochemistry Preferred by Co(II) d ⁷ , Ni(II) d ⁸ and Cu(II) d ⁹ Complexes; Site Selection of the Cations in Spinel and Inverse Spinel and OSSE; Preference between the Trigonal Bipyramidal (TBP) Structure and the Octahedral Structure in Terms of CFT; Effect of CFSE on the Reduction Potential (E ⁰) of the Redox Couple M ⁽ⁿ⁺¹⁾⁺ /M ⁿ⁺ Couple	
3.15 Merits and Demerits of CFT	483
Merits of CFT; Demerits of CFT	
3.16 Experimental Evidences in Favour of Metal-Ligand Orbital Overlap in the Coordination Compounds	485
3.17 Molecular Orbital Approach of Bonding in Coordination Compounds	490
MOT of σ -Bonding in the Octahedral Complexes; Molecular Orbital Theory of π -Bonding in the Octahedral Complexes; Effect of π -Bonding on the Value of $10Dq_o$ (<i>i.e.</i> Δ_o) of Octahedral Complexes; Spectrochemical Series in the Light of MOT; The 18-Electron (18e) Rule for the Octahedral Complexes in Terms of MOT; Molecular Orbital Picture of the Square Planar Complexes; Molecular Orbital Energy Diagram of a Tetrahedral Complex	
3.18 Comparison of VBT, CFT and MOT of Bonding in the Octahedral Coordination Compounds	511
3.19 Molecular Orbital Stabilisation Energy (MOSE) vs. Crystal Field Stabilisation Energy (CFSE)	512
Exercise III	516
4. Thermodynamic Aspects of Stability of Metal Complexes	528
4.1 Stability of the Complexes: Thermodynamic Stability and Kinetic Stability	528
4.2 Stepwise and Overall Stability Constants of the Metal Complexes	529
4.3 Conditional Stability Constants	533

4.4 Order of the Stepwise Stability Constants	536
Statistical Factors for the Monodentate Ligands; Statistical Factors for the Symmetrical Didentate Ligands; Nonstatistical Factors (<i>i.e.</i> Chemical Factors); Breaking the Rule: Anomalous Stability Order Including the Reverse Statistical Order	
4.5 Chemical Factors Governing the Stability Constants	544
Effects of the Properties of the Metal Centres; Properties of the Ligands Affecting the Stability Constants; Chelate Effect: Thermodynamic and Kinetic Aspects; Macrocyclic Effect and Cryptate Effect (<i>i.e.</i> Macrobicyclic Effect—An Extension of the Chelate Effect); Preorganization Energy (Enthalpic Factor) and Entropic Factor	
4.6 Stabilities of the Metal Complexes of Crown Ether, Spherands and Cryptands: Alkali Metal Complexes	582
Crown Ether Complexes: Structure; Spherands: The Preorganized Macrocycles; Cryptands—Multicyclic Macrocycles: Football Ligands; Sepulchrate: Football Ligands; Applications of the Macrocyclic Ligands Related to the Crown Ethers; Crown Ether Related Macrocycles and Supramolecular Systems and Molecular Recognition; Ionophores Resembling the Crown Ethers and Naturally Occurring Antibiotics: Alkali Metal Complexes of the Naturally Occurring Ionophores	
4.7 Ternary Complexes: Factors Affecting their Stabilities	613
Thermodynamic Parameters Measuring the Stabilities of the Ternary Complexes; Different Factors Determining the Stabilities of the Ternary Complexes	
4.8 Determination of Stability Constants and Composition of the Complexes	622
Graphical Evaluation of Stability Constants from the Knowledge of Formation Function (\bar{n}) and Concentration of Free Ligands ([L]); Formation Curves and Bjerrum's Half \bar{n} -Method; Determination of Stability Constants from the Knowledge of [M], <i>i.e.</i> Free Metal Concentration; pH-Metric Determination of the Stability Constant under the Competition between Hydrogen Ion and Metal Ion for the Ligand; Spectrophotometric Method of Determination of Stability Constant; Determination of Stability Constant by Ion Exchange Method; Polarographic Method of Determination of Stability Constants and Composition of the Complex; Determination of the Composition of Complexes by the Method of Continuous Variation (Job's Method) and Determination of Stability Constant from the Job's Plot; Determination of the Composition of a Complex by Mole Ratio Method; Determination of the Composition of Complexes by Slope Ratio Method	
4.9 Stabilization of Unusual (or Less Common) Oxidation States of Metals	642
Stabilization of Higher Oxidation States; Stabilization of Low Oxidation States	
Exercise IV	650
Appendices	A1–A16
Appendix I: Units and Conversion Factors	A1
Appendix II: Some Physical and Chemical Constants	A3
Appendix III: Wavelength and Colours	A4
Appendix IV: Names, Symbols, Atomic Numbers and Atomic Weights of the Elements	A5
Appendix V: Some Useful Mathematical Relationships	A6
Appendix VI: Latimer Diagrams (Standard Reduction Potentials) of Elements	A9
Appendix VII: Books Consulted	A16
Index	I1–I8
