

Contents at a Glance

Section I General Approach to Medical Laboratory Science

1. Introduction	3
2. Safety in the Laboratory	6
3. General Laboratory Instruments and Equipments	16
4. Basic Chemistry and Laboratory Calculations	50
5. Quality Assurance System	66

Section II Clinical Chemistry

1. Essential Analytical Instruments in Clinical Biochemistry	73
2. Quality Control in Clinical Chemistry	90
3. Carbohydrate Metabolism	99
4. Renal Function Tests and Urine Analysis	111
5. Liver Function Tests	152
6. Enzymology	163
7. Electrolytes and Blood Gases	176
8. Lipids and Lipoproteins	188
9. Chemical Tests for Diseases of the Alimentary Tract	199
10. CSF and Other Body Fluids	209
11. Endocrine Function Tests	218
12. Automation in Clinical Chemistry	245

Section III Haematology

1. Introduction	259
2. Haemopoiesis (Production of Blood Cells)	265
3. The Complete Blood Count (CBC)	273
4. Examination of Peripheral Blood Smear	288
5. Anaemia	303
6. Miscellaneous Investigations in Haematology	314
7. Haemostasis and Fibrinolysis	331
8. Blood Group Serology (Immunohaematology)	350
9. Blood Banking, Blood Transfusion and Compatibility Testing	367

xii *Contents at a Glance*

10. The Major Histocompatibility Complex (MHC) and the HLA System	377
11. Automation in Haematology	384

◆ Section IV Histopathological Techniques and Cytology

1. Introduction	391
2. General Outline of Procedures in the Examination of Tissues	396
3. Fixation and Decalcification	399
4. Processing	410
5. Section Cutting	421
6. Theory of Staining	437
7. Haematoxylin Staining Solutions and Methods	448
8. Staining Reactions of Carbohydrates	451
9. Staining of Collagen, Reticulum and Elastic Tissue Fibres	458
10. Demonstration of Pigments	464
11. Staining of Microorganisms in Tissues	471
12. Staining of Lipids	484
13. The Central Nervous System (CNS)	491
14. Enzyme Histochemistry	501
15. Electron Microscopy in Histopathology	510
16. Cytology	513

◆ Section V Medical Microbiology

Part One: Bacteriology

1. Introduction	525
2. Morphology and Anatomy of Bacteria	530
3. Microscopic Examination of Bacteria	534
4. Sterilisation	546
5. Nutrition, Growth and Metabolism of Bacteria	557
6. Bacterial Genetics	574
7. Principles of Culture Media	584
8. Principles and Procedures of Diagnostic Bacteriology	595
9. Diagnosis of Infection by Specific Anatomic Site	615
10. Identification Methods	644
11. Systematic Bacteriology	659
12. Gram Positive Cocci	662
13. Gram Negative Cocci	675
14. Enterobacteriaceae	681
15. Small Gram Negative Rods	713
16. Mycobacteria	725
17. Actinomycetes	738
18. Aerobic Gram Positive Rods	742
19. Anaerobic Gram Negative Rods	752

20. Anaerobic Gram Positive Rods	755
21. Spirochaetes	762
22. Chlamydia, Mycoplasma, Rickettsia and Miscellaneous Bacteria	772
23. Antimicrobial Susceptibility Tests	788
24. Bacteriological Examination of Water, Milk, Food and Air	818
25. Formulae and Preparation of Culture Media	831
<u>Part Two: Medical Virology</u>	
1. Introduction	859
2. Methods of Cultivation of Viruses	871
3. Diagnosis of Viral Disease	881
4. Virus Vaccines and Antiviral Therapeutic Agents	903
<u>Part Three: Parasitology</u>	
1. Introduction	909
2. Laboratory Techniques for Intestinal Parasites	918
3. Laboratory Techniques for Blood Parasites	960
4. Examination of Urine, Aspirates, Body Fluids and Tissue Biopsies	975
5. Serology and Culture of Parasites	986
6. Intestinal Protozoan Parasites	989
7. Blood and Tissue Protozoa	997
8. Common Intestinal Helminths of Humans	1015
9. Common Blood and Tissue Helminths	1029
10. Quality Control Procedures in Parasitology	1043
<u>Part Four: Medical Mycology</u>	
1. Introduction	1047
2. Laboratory Techniques in Mycology	1053
3. Identification of Fungal Isolates	1067
4. Serodiagnosis of Mycotic Infections	1079
5. Fungal Infections	1082
<u>Part Five: Basic Immunology and Serodiagnosis</u>	
1. Introduction	1111
4. Antigen-Antibody Reaction in Vitro	1151
5. Common Serodiagnostic Tests	1177
◆ Section VI Small Laboratory Animals	
1. Care and Use of Experimental Animals	1213
◆ Section VII Recent Advances in Laboratory Science	
1. Introduction to Recent Technologies	1235
◆ Appendices	
<i>Review Questions</i>	1298

Contents in Detail

Foreword vii

Preface ix

Section I General Approach to Medical Laboratory Science

1. Introduction	3	Water Bath	23
Regulating Body	3	Water Stills and Deionisers	23
Qualifications	3	Refrigerators and Freezers	26
Surveillance of Clinical Laboratories	4	Microscope	26
Professional Ethics	4	Components of a Microscope	30
The Laboratory	5	The Objective	31
2. Safety in the Laboratory	6	The Eyepiece or the Ocular System	34
Hazards in the Laboratory	6	Condenser and Iris Diaphragm	35
Safety Precautions Against Infection	7	Filters	36
Major Causes of Laboratory Hazards	8	Sources of Illumination (Light)	36
Reporting Accidents	9	Kohler Illumination	36
Biosafety in Clinical Laboratory	10	Mirror	37
Biosafety Programme	12	Total Magnification of a Microscope	37
Disposal of Medical Waste	14	Use and Care of a Bright-Field Microscope	37
3. General Laboratory Instruments and Equipments	16	Microscopy	39
Laboratory Glasswares and Plasticwares	16	Micrometry	48
Equipments for Weighing	17	4. Basic Chemistry and Laboratory Calculations	50
Centrifuge	20	Definitions	50
Autoclave	23	Hydrogen Ion Concentration and pH	51
Incubator	23	Buffer Solutions	53
		Solutions	53
		Diluting Solutions	55
		Chemical Analyses	57
		Standard Solutions	57
		Indicators	59
		SI Units	59
		Statistics in Clinical Laboratory	61

5. Quality Assurance System	66	Bilirubin and Urobilinogen 135	
Preanalytical Factors 66		Porphobilinogen 139	
Analytical Factors 67		Urobilin 140	
Postanalytical Factors 70		Leukocyte Esterase 140	
		Nitrite 141	
		Microscopic Examination of Urine 141	
		Urinary Calculi 150	
Section II Clinical Chemistry			
1. Essential Analytical Instruments in Clinical Biochemistry	73	5. Liver Function Tests	152
Colorimetry 73		Secretion of Bile 152	
Instrumentation 76		Functions of the Liver 153	
Verification of Beer's Law 81		Metabolism of Bilirubin 153	
Chromatography 81		Liver Function Tests 154	
Electrophoresis 84		Estimation of Serum/Plasma Bilirubin 155	
Other Methods Used for Chemical Assays 85		The Plasma (serum) Proteins 157	
Radioactivity 88		Fractionation of Proteins 160	
2. Quality Control in Clinical Chemistry	90	6. Enzymology	163
Pre-Analytical Quality Control 90		Measurement of Enzymes 163	
Blood Specimens 90		Factors Affecting Enzyme Analysis 163	
Urine Specimens 91		Methods of Measurement of Enzyme Activity 164	
Faecal Specimens 93		Serum/Plasma Amylase 165	
Cerebrospinal Fluid (CSF) 93		Serum or Plasma Alkaline Phosphatase (ALP) 165	
Dispatch of Specimens 93		Serum Prostatic Acid Phosphatase 167	
Analytical Quality Control 93		Lactate Dehydrogenase (LDH) 168	
Standard Deviation (SD) 96		Creatine Phospho Kinase (CPK) 169	
Post Analytical Control 98		Aminotransferases 170	
3. Carbohydrate Metabolism	99	γ-Glutamyl Transferase (GGT) 173	
Metabolism 99		Isoenzymes 174	
Metabolism of Carbohydrates 99		7. Electrolytes and Blood Gases	176
Diabetes Mellitus 106		Electrolytes 176	
4. Renal Function Tests and Urine Analysis	111	Measurement of Sodium and Potassium 177	
Renal Function 112		Serum/Plasma Chloride 180	
Renal Function Tests 113		Blood Gases and Bicarbonate 182	
Urea 113		Calcium 185	
Creatinine 116		Phosphorus 186	
Uric Acid 118		8. Lipids and Lipoproteins	188
Urine Analysis 120		Cholesterol 188	
Routine Tests for Urine Analysis 121		Triglycerides 189	
Proteins 126		Phospholipids 189	
Reducing Substances 129		Non-Esterified Fatty Acids (NEFA) 189	
Ketone Bodies (Ketones) 132			

Lipoproteins 190
Apolipoprotein 190
Lipoprotein Metabolism 191
Estimation of Total Serum/Plasma
Cholesterol 191
Estimation of Serum/Plasma HDL
Cholesterol 193
Estimation of Serum/Plasma LDL
Cholesterol 194
Estimation of Serum Triglycerides 194
Determination of Serum Lipoproteins 196

9. Chemical Tests for Diseases of the Alimentary Tract 199

Examination of Gastric Juice 199
Occult Blood in Faeces 202
Faecal Fat 203
Pancreas 204

10. CSF and Other Body Fluids 209

Cerebrospinal Fluid (CSF) 209
Routine Laboratory Examination
of CSF 211
Synovial Fluid 215
Pleural Fluid 216
Peritoneal Fluid 217

11. Endocrine Function Tests 218

Hormones and Endocrine Glands 218
Hypothalamus 219
Pituitary Gland 220
Adrenal Glands 221
Thyroid Gland 223
Parathyroid Glands 224
Hormones of the Reproductive System
(Gonadal Hormones) 225
Pancreas and its Hormones 230
General Principles of Evaluating
Endocrine Function 230
Investigation of Pituitary, Adrenal,
Thyroid and Gonadal Disorders 232
Semen Analysis 238

12. Automation in Clinical Chemistry 245

Types of Automated Analyser 245
Continuous Flow Systems 246
Discrete Analysers 247

Centrifugal Analysers 248
Thin-Film or Dry Chemistry
Autoanalysers 250
Use of Automatic Measuring Devices 250

Section III Haematology

1. Introduction 259

Collection of Blood 259
Use of Anticoagulants 263

2. Haemopoiesis (Production of Blood Cells) 265

Main Cell Lines 265
Erythropoiesis 267
Leucopoiesis 268
Functions of White Blood Cells 272
Functions of Platelets 272

3. The Complete Blood Count (CBC) 273

Haemoglobin (Hb) 273
Estimation of Haemoglobin 275
Haemocytometry (Counting of Cells
in Blood) 277
Manual Cell Counts 277
Use of Counting Chamber (Haemocytometer)
for Cell Counting 279
Red Cell Count (Manual Method) 281
Hematocrit or Packed Cell Volume
(PCV) 282
Red Blood Cell Indices 283
Erythrocyte Sedimentation Rate (ESR) 284
White Cell Count (Total, TLC)
(Manual Method) 285
Total Eosinophil Count (TEC) 286
Platelet Count (Manual Method) 286

4. Examination of Peripheral Blood Smear 288

Preparation of Blood Smear 288
Staining the Blood Smear 289
Microscopic Examination of the Blood
Film 290
The Differential Count of Leucocytes 291
Interpretation of the Variations/
Abnormalities in Leucocytes 293

Morphological Variations/Abnormalities in Erythrocytes	296		
5. Anaemia		303	
Classification of Anaemia	303		
Morphological Classification of Anaemia	303		
Etiological Classification of Anaemia	304		
Physiological Types of Anaemia	305		
6. Miscellaneous Investigations in Haematology		314	
Reticulocyte Count	314		
Staining of Heinz Bodies	315		
Staining of Siderocytes (Demonstration of Pappenheimer Bodies)	316		
Peroxidase Staining	316		
Periodic-Acid Schiff (PAS) Reaction	317		
Neutrophil (Leucocyte) Alkaline Phosphatase	317		
Examination of Bone Marrow	319		
Test for Sickle cells	320		
Demonstration of Le Cells	320		
Osmotic Fragility Test	322		
Estimation of Haemoglobin F (Foetal Haemoglobin) by Alkali Denaturation Method	324		
Haemoglobin Electrophoresis	325		
Detection of Glucose-6-Phosphate Dehydrogenase (G-6-PD) Deficiency	326		
Ham's Test (Acidified Serum Test)	327		
Donath-Landsteiner (D-L) Antibody Test	327		
Detection of Drug-Induced Antibody	327		
Direct Antiglobulin Test (Direct Coomb's Test)	328		
Autohaemolysis test	328		
Spectroscopic Examination of Blood for the Detection of Abnormal Haemoglobin Pigments	329		
7. Haemostasis and Fibrinolysis		331	
Haemostasis	331		
Mechanism of Haemostasis	331		
Function of Platelets in Haemostasis and Coagulation	333		
Coagulation	333		
Coagulation Factors	334		
Pathways for the Coagulation Process	337		
Fibrinolysis	337		
Disorders of Blood Coagulation	339		
Tests for Coagulation Function	343		
Clotting Time (Lee-White method)	343		
Clot Retraction	344		
Test to Measure the Extrinsic System: One-Stage Prothrombin Time (PT)	344		
Test for Prothrombin Consumption Index (PCI)	345		
Test for Intrinsic System	346		
Assays of Coagulation Factors	347		
8. Blood Group Serology (Immunohaematology)			350
Blood Group Genetics	350		
Blood Group Antigens	351		
Blood Group Antibodies	351		
Main Blood Group Systems	351		
ABO Blood Group System	352		
ABO Grouping	354		
ABO Grouping Methods	356		
Rhesus (Rh) Grouping System	357		
Method 1: Saline Method for	360		
Rh-D Typing Using Complete Anti-D	360		
Method 2: Albumin Displacement Technique for Rh Typing Using Incomplete Anti-D	360		
Method 3: Enzyme Techniques	361		
Antiglobulin Techniques	361		
Antihuman Globulin Tests (Coombs' Tests)	362		
Clinically Less Significant Blood Group Systems	364		
9. Blood Banking, Blood Transfusion and Compatibility Testing			367
Selection of a Donor	367		
Pre-transfusion Tests on Donor's Blood	367		
Collection of Blood	368		
Compatibility Testing	369		
Methods of Crossmatching	370		
Unexpected Antibody Screening	371		
Blood Transfusion	371		

Use of Blood Components, Fractions and Derivatives	372		
Transfusion Reactions	374		
Investigation of Suspected Transfusion Reaction	375		
10. The Major Histocompatibility Complex (MHC) and the HLA System	377	5. Section Cutting	421
Proteins of the HLA System	377	Microtomy	421
Techniques for HLA Typing	379	Microtomes	421
Role of HLA System in Transplantation	382	Microtome Knives	426
11. Automation in Haematology	384	Terms used in Microtomy	426
Automated Cell Counting Methods	384	Sharpening of Microtome Knives	427
Autoanalysers in Coagulation Studies	387	Stropping	429
Automation in Blood Group Serology	387	Routine Paraffin Section Cutting	430
		Floating Out Bath	431
		Difficulties Encountered in Paraffin Section Cutting	431
		Frozen Sections	435
		Fixing Tissue for Cryostat Examination	436
Section IV Histopathological Techniques and Cytology		6. Theory of Staining	437
1. Introduction	391	Impregnation	438
The Cell	391	Chemistry of Colour in Dyestuffs	438
Metabolism of the Cell	394	Classification of Dyes	439
Cell Division	394	Natural Dyes	439
		Synthetic Dyes	441
2. General Outline of Procedures in the Examination of Tissues	396	Basic, Acid and Neutral Dyes	441
Reception	396	Storage and Maintenance of Dyes	442
Fresh specimen	396	Staining Properties of Dyes	442
Fixed Tissues	397	Staining Equipments and Materials	444
Paraffin Sections	397	Methodology of Staining	445
Cutting and Staining	398	Staining in General	445
Report and Filing	398	Mounting Stained Sections	446
		Permanent Mounting Media	446
3. Fixation and Decalcification	399	7. Haematoxylin Staining Solutions and Methods	448
Fixation	399	Preparation of Haematoxylin Stain Solutions	449
Simple Fixatives	400	8. Staining Reactions of Carbohydrates	451
Compound Fixatives	402	Periodic Acid Schiff (PAS) Reaction	451
Micro Anatomical Fixatives	402	Periodic Acid-Schiff Method	452
Fixation of Smears	405	Glycogen	453
Fixation of Gross Specimens	405		
Secondary Fixation	406		
Decalcification	406		
4. Processing	410		
Dehydration	411		

General Staining Methods for Mucins	455	Reaction Process of Enzyme	
Methods for Acid Polysaccharides and Mucoproteins	456	Histochemistry	503
Metachromatic Staining Methods	456	Methods of Enzyme Demonstration	503
9. Staining of Collagen, Reticulum and Elastic Tissue Fibres	458	Acid Phosphatase	504
Collagen and Reticulin	458	Esterases	505
Staining of Collagen	459	Peptidases	506
Elastic Fibres	461	Oxidative Enzymes	507
10. Demonstration of Pigments	464	15. Electron Microscopy in Histopathology	510
Artifacts	464	Fixation	510
Endogenous Pigments	464	Dehydration	511
Haemosiderins	465	Clearing	511
Inorganic Iron	466	Embedding	511
Bile Pigments	466	Sectioning for Electron Microscope	511
Melanin	467	16. Cytology	513
Lipofuscin Pigment	468	Fixation	514
Exogenous Pigments	469	Subdivisions of Cytology	515
11. Staining of Microorganisms in Tissues	471	Gynaecological Cytology	515
Staining of Bacteria	471	Staining	516
Staining Methods for Spirochaetes	475	Hormone Assessment	517
Staining Methods for Fungi In Sections	476	Non-Gynaecological Cytology	518
Methods for Viral Inclusion Bodies	479	Fine Needle Aspiration Cytology (FNAC)	520
Staining Methods for Protozoa and Other Parasites	481		
Examination of Whole Worms	482		
12. Staining of Lipids	484	<hr/>	
Demonstration of Lipids	484	Section V Medical Microbiology	
Staining Methods	485	Part One: Bacteriology	
Methods for Demonstrating Cholesterol	489	<hr/>	
13. The Central Nervous System (CNS)	491	1. Introduction	525
Preparation of Sections of CNS	492	Taxonomy and Classification of Microorganisms	525
Staining and Impregnation Methods for Demonstrating CNS Structures	492	2. Morphology and Anatomy of Bacteria	530
Neuroglia	495	Morphology and Structure of Bacteria	530
Myelin	497	Bacterial Anatomy	531
14. Enzyme Histochemistry	501	External Structures	531
Factors Affecting Enzyme Demonstration	501	Internal Structures	533
Specimen Preparation for Enzyme Histochemistry	502	3. Microscopic Examination of Bacteria	534
		Wire Loops	534
		Preparation of Smears	535
		Staining of Bacteria	536
		Types of Staining	536

xx Contents in Detail

Simple Staining Methods	537	Common Terms Used in the Diagnosis of Infectious Diseases	597
Differential Staining Methods	537	Normal Flora	599
Special Staining Methods	541	Specimen	599
Staining of Capsules	542	A General Scheme for Examining Clinical Specimens	601
Staining of Spores	543	Anaerobic Cultivation Methods	603
Staining of Bacterial Cell Wall	544	Classification of Pathogenic Organisms	610
Staining Methods for Flagella	544	Safety Cabinets	611
Staining Method for Spirochaetes	545	Quality Assurance	612
4. Sterilisation	546	9. Diagnosis of Infection by Specific Anatomic Site	615
Definitions	546	Upper Respiratory Tract (URT)	615
Methods of Sterilisation	546	Lower Respiratory Tract	618
Physical methods of Sterilisation	547	Eye Swab	619
Radiation	551	Ear Swabs	620
Filtration	552	Pus, Abscess and Wound Drain	621
Chemical Sterilisation (Disinfectants and Antiseptics)	553	Catheter TIPS	622
Major Groups of Disinfectants	554	Blood	622
Gaseous Sterilisation	555	Cerebrospinal Fluid (CSF)	625
Laboratory Evaluation of Disinfectants	555	Effusions/Fluids	629
5. Nutrition, Growth and Metabolism of Bacteria	557	Synovial Fluid	629
Nutritional Requirements of Bacteria	558	Pleural and Pericardial Fluids	630
Microbial Populations and Cellular Growth	559	Ascitic Fluid	630
Counting the Number of Cells	560	Hydrocoele Fluid	631
Factors Affecting Bacterial Growth	564	Stool (Faeces)	632
Bacterial Division	566	Examination of Stool Specimens (Faeces)	633
Bacterial Growth Cycle	567	Urine	635
Bacterial Metabolism	569	Urogenital Sites	639
6. Bacterial Genetics	574	10. Identification Methods	644
Transcription and Translation of Genetic Information	574	Identification Tests	644
Genetic Variations in Bacteria	575	Aryl Sulphatase Test	645
Recombination	578	Bile Solubility Test	645
Plasmids	580	Bile Tolerance Test	646
7. Principles of Culture Media	584	Catalase Test	646
Composition of Culture Media	584	Camp Test	647
Types of Media	585	Carbohydrate Assimilation (Utilisation) Test	647
Preparation of Culture Media	587	Carbohydrate Fermentation Test	647
Culture Methods	591	Citrate Utilisation Test	648
8. Principles and Procedures of Diagnostic Bacteriology	595	Coagulase Test	648
Infection and Safety in the Laboratory	597	Decarboxylase Test	649

Deoxyribonuclease (DNASE) Test	650	Classification of Enterobacteria	681
Hydrogen Sulphide (H ₂ S) Production	650	Genus <i>Shigella</i>	686
Indole Test	650	Preparation of Culture Media	687
Lecithinase (Phospholipase C) Test	651	Alkalescens-Dispar (A-D) Group	689
Methyl Red (MR) Test	652	Genus <i>Salmonella</i>	689
Nitrate Reduction Test	652	Serological Tests For <i>Salmonella</i>	692
ONPG (Beta-Galactosidase) Test	653	Genus <i>Arizona</i>	696
Oxidase Test (Cytochrome Oxidase)	653	Genus <i>Citrobacter</i>	696
Oxidation-Fermentation (O-F) Test	654	Genus <i>Klebsiella</i>	697
Phenylalanine Deaminase Test	655	Genus <i>Enterobacter</i>	699
Malonate Utilisation Test	655	Genus <i>Hafnia</i>	699
Gluconate Test	655	Genus <i>Serratia</i>	700
Potassium Cyanide (KCN) Test	656	The <i>Proteus</i> Group: Genera <i>Proteus</i> ,	
Urease Test	656	<i>Morganella</i> and <i>Providencia</i>	700
Motility Indole Urea (MIU) Medium	657	Genus <i>Proteus</i>	700
Voges-Proskauer (VP) Test	657	Genus <i>Providencia</i>	702
Detection of Motility	657	Genus <i>Morganella</i>	702
New Concepts and Developments in the		Genus <i>Yersinia</i>	702
Identification Methods	658	Genus <i>Erwinia</i>	704
11. Systematic Bacteriology	659	Other Related Enteric Bacteria	704
Steps in Systematic Bacteriology	660	Genus <i>Vibrio</i>	704
12. Gram Positive Cocci	662	Genus <i>Aeromonas</i>	707
Aerobic Gram Positive Cocci	662	Genus <i>Pseudomonas</i>	707
Family Micrococcaeae	662	Genus <i>Alcaligenes</i>	709
Genus <i>Micrococcus</i>	662	Genus <i>Campylobacter</i>	710
Genus <i>Staphylococcus</i>	663	Genus <i>Helicobacter</i>	711
Laboratory Diagnosis of <i>Staphylococcal</i>		Genus <i>Flavobacterium</i>	712
Infections	664	Genus <i>Acinetobacter</i>	712
Streptococci	665	15. Small Gram Negative Rods	713
Genus <i>Streptococcus</i>	665	Genus <i>Moraxella</i>	713
Laboratory Diagnosis of <i>Streptococcal</i>		Genus <i>Pasteurella</i>	713
Infections	668	Genus <i>Francisella</i>	714
Lancefield Grouping of Beta-Haemolytic		Genus <i>Yersinia</i>	714
Streptococci	670	Genus <i>Haemophilus</i>	715
Pneumococci	672	Genus <i>Gardnerella</i>	718
Anaerobic Gram Positive Cocci	674	Genus <i>Bordetella</i>	719
13. Gram Negative Cocci	675	Genus <i>Brucella</i>	720
I. Aerobic Gram Negative Cocci	675	16. Mycobacteria	725
Genus <i>Neisseria</i>	675	Genus <i>Mycobacterium</i>	725
Commensal <i>Neisseriae</i>	679	<i>Mycobacterium Tuberculosis</i> (Human	
II. Gram Negative Anaerobic Cocci	680	Tubercle Bacilli)	727
14. Enterobacteriaceae	681	<i>Mycobacterium Leprae</i> (Leprosy	
General Characteristics	681	Bacillus)	732

<i>Mycobacterium Ulcerans</i>	735		
Atypical Mycobacteria	736		
17. Actinomycetes	738		
Genus <i>Actinomyces</i>	738		
Genus <i>Nocardia</i>	739		
Genus <i>Streptomyces</i>	740		
Genus <i>Actinomadura</i>	740		
18. Aerobic Gram Positive Rods	742		
Genus <i>Corynebacterium</i>	742		
<i>C. Diphtheriae</i>	742		
Other Corynebacteria	746		
Genus <i>Listeria</i>	746		
Genus <i>Erysipelothrix</i>	748		
Genus <i>Lactobacillus</i>	749		
Genus <i>Bacillus</i>	749		
19. Anaerobic Gram Negative Rods	752		
Genus <i>Bacteroides</i>	752		
Genus <i>Fusobacterium (Fusiform)</i>	753		
Genus <i>Leptotrichia</i>	754		
20. Anaerobic Gram Positive Rods	755		
Genus <i>Clostridium</i>	755		
Genus <i>Propionibacterium</i>	761		
21. Spirochaetes	762		
Genus <i>Treponema</i>	763		
Syphilis	763		
Genus <i>Borrelia</i>	766		
Genus <i>Leptospira</i>	768		
22. Chlamydia, Mycoplasma, Rickettsia and Miscellaneous Bacteria	772		
Genus <i>Chlamydia</i>	772		
Genus <i>Mycoplasma</i>	776		
<i>Rickettsiaceae</i>	780		
Genus <i>Rickettsia</i>	781		
Genus <i>Coxiella</i>	784		
Genus <i>Rochalimaea</i>	785		
Genus <i>Ehrlichia</i>	785		
Genus <i>Bartonella</i>	785		
Genus <i>Legionella</i>	786		
23. Antimicrobial Susceptibility Tests	788		
Antimicrobial Drugs of Clinical Importance	789		
		Bacterial Resistance to Antimicrobial Agents	795
		Mechanisms of Antimicrobial Resistance	796
		Selection of Antimicrobial Agents for <i>In Vitro</i> Testing	798
		Laboratory Tests to Monitor Antimicrobial Therapy	801
		A. Determination of Inhibitory Activity of Antimicrobial Agents	801
		Disc Diffusion Methods	808
		Ditch Plate Method	811
		Heatley Cup or Punched Hole Diffusion Method	811
		Special Considerations in Susceptibility Testing	812
		Direct Sensitivity Tests	814
		Antibiotic Combinations	814
		B. Tests for the Assessment of Patient's Response to Antimicrobial Therapy (Antibiotic Assays)	815
		24. Bacteriological Examination of Water, Milk, Food and Air	818
		Bacteriological Examination of Water	818
		Collection of Water Samples	818
		Presumptive Coliform Count	819
		Tests for Faecal Streptococci and <i>Clostridium Perfringens</i>	823
		Plate Count	824
		Bacteriological Examination of Milk	824
		Examination of Milk	824
		Bacteriological Examination of Food	826
		Testing the Quality of Food	826
		Food Poisoning	826
		Bacteriological Examination of Air	829
		25. Formulae and Preparation of Culture Media	831
		Basal Media	831
		Peptone Water	832
		Nutrient Agar	832
		Blood Agar	833
		Selective Blood Agar	833
		Carbohydrate Fermentation Media	834
		Litmus Milk	835

Special Culture Media for Various Bacteria 835
 Media for Anaerobes 835
 Culture Media For *Bordetella Pertusis* 836
 Culture Media for *Brucella* 837
 Culture Media for *Campylobacter* Species 837
 Culture Media for *Clostridium* Species 838
 Culture Media for Corynebacteria 838
 Culture Media for Enteric Bacteria and Other Gram Negative Bacilli 839
 Deoxycholate Citrate Agar (DCA) 840
 CLED Medium 840
 Selenite F Broth (Modified) 841
 Hektoen Enteric Agar 841
 Xylose Lysine Deoxycholate (XLD) Agar 841
 Medium for the Isolation of *Francisella Tularensis* (Glucose Cystine Chocolate Agar) 842
 Culture Media for Fungi 842
 Culture Media for *Haemophilus* Species 843
 Bacitracin Chocolate Agar 843
 Culture Medium for Lactobacilli 843
 Culture Medium for *Legionella* 844
 Culture Media for *Mycobacterium* Species 844
 Pyruvate LJ Medium 845
 Dorset Egg Medium 845
 Middlebrook 7H10 Agar 845
 Culture Media for Pathogenic *Neisseria* 845
 Modified Thayer-Martin (MTM) Medium 846
 Modified New York City (MNYC) Medium for Pathogenic *Neisseria* 847
 Media Used to Prevent the Swarming of *Proteus* 847
 Culture Media for *Staphylococcus* 847
 Culture Media for the Isolation of Streptococci 848
 Transport Media 848
 Culture Media for *Vibrio Cholerae* 849
 Culture Media for Spirochaetes 850

Culture Medium for *Gardnerella Vaginalis* 851
 Identification Media 851

Part Two: Medical Virology

1. Introduction 859
 Morphology of Viruses 859
 Chemical Constituents of Viruses 861
 Classification of Medically Important Viruses 862
 Replication of Viruses 867
 Pathogenesis of Viral Infections 869

2. Methods of Cultivation of Viruses 871
 Animal Inoculation 871
 Inoculation of Embryonated Eggs 871
 Inoculation of Organs, Tissue Fragments or Cell Monolayers 873
 Preparation of Primary Cell Culture 877
 Detection of Mycoplasma in Cell Culture Using Hoechst Stain Kit 880

3. Diagnosis of Viral Disease 881
 Collection of Specimens for Virology 881
 Transport and Storage of Specimens for Virology 882
 Diagnostic Methods 883
 I. Direct Methods for Detection of Viruses 883
 II. Isolation and Identification of VIRAL Agents 891
 III. Serodiagnosis of Viral Infections 899

4. Virus Vaccines and Antiviral Therapeutic Agents 903
 Killed Viruses Vaccines 903
 Recombinant DNA Vaccine 904
 Antiviral Therapeutic Agents 904
 Anti-Viral Drugs 905

Part Three: Parasitology

1. Introduction 909
 Host-Parasite Relationship 909
 Terms Used in Parasitology 909
 Transmission of Parasitic Infections 910

Parasitic Infection, Infestation and Disease	912	Examination of Lymph Nodes, Spleen, Liver Aspirates; Bone Marrow; Spinal Fluid and Eye Specimens	981
Parasites of Medical Importance	914		
2. Laboratory Techniques for Intestinal Parasites	918	5. Serology and Culture of Parasites	986
Collection of Faeces	918	Serological Diagnosis	986
Number of Specimens	918	Culture Techniques	987
Preservation of Faecal Specimens	919	6. Intestinal Protozoan Parasites	989
Visual or Macroscopic Examination of Faeces	920	I. Intestinal Amoebae	989
Microscopic Examination (Wet Mounts)	921	Entamoeba Histolytica	989
Identification of Parasites in Wet Mounts	923	II. Intestinal Flagellates	991
Supplementary Techniques	947	<i>Giardia Lamblia (Intestinalis)</i>	991
Concentration Methods	947	III. Intestinal Ciliate	992
Permanent Stained Smears	949	<i>Balantidium Coli</i>	992
Baermann Technique	951	IV. Intestinal Coccidia	993
Filter Paper Strip Culture Technique to Differentiate between Hookworm Species	951	<i>Cryptosporidium</i> Species	993
Estimation of Worm Burden by Egg Counts	952	<i>Isospora Belli</i>	994
Examination of Other Specimens from the Intestinal Tract	952	<i>Sarcocystis Hominis</i>	995
Identification of Adult Worms in Faeces	954	<i>Blastocystis Hominis</i>	996
Special Techniques for Coccidia (Faecal)	954	7. Blood and Tissue Protozoa	997
3. Laboratory Techniques for Blood Parasites	960	I. Amoebae	997
Collection of Specimens for Blood Films	960	<i>Naegleria Fowleri</i>	997
Preparation of Blood Films	960	<i>Acanthamoeba</i> Species	998
Staining Blood Films	961	II. Flagellates	998
Examination of Stained Blood Films for Parasites	964	<i>Trichomonas Vaginalis</i>	998
Special Techniques for Blood Parasites	966	III. Haemoflagellates	999
4. Examination of Urine, Aspirates, Body Fluids and Tissue Biopsies	975	Trypanosomes	1000
Parasites in Urine	975	<i>Leishmania</i> Species	1004
Parasites in Aspirates	978	IV. Ciliates	1006
		V. Coccidia	1006
		Malarial Parasites (Genus <i>Plasmodium</i>)	1006
		Genus <i>Babesia</i>	1011
		<i>Toxoplasma Gondii</i>	1012
		<i>Pneumocystis Carinii</i>	1013
		<i>Microsporidia</i>	1014
		8. Common Intestinal Helminths of Humans	1015
		Intestinal Cestodes (Tapeworms)	1015
		<i>Taenia Saginta</i> (Beef Tapeworm)	1016
		<i>Taenia Solium</i> (Pork Tapeworm)	1017
		<i>Hymenolepis Nana</i>	1018
		Intestinal and Liver Trematodes (Flukes)	1019
		Intestinal Nematodes	1020

<i>Ascaris Lumbricoides</i> (Round Worm)	1021	Techniques for Direct Examination	1056
<i>Enterobius Vermicularis</i> (Pinworm or Thread Worm)	1022	Potassium Hydroxide (KOH) Preparation	1056
<i>Trichuris Trichuira</i> (Whip Worm)	1023	Negative Staining using India Ink or 10% Nigrosin	1057
<i>Strongyloides Stercoralis</i>	1026	Common Culture Media for Fungi	1059
9. Common Blood and Tissue Helminths	1029	Processing of Clinical Specimens	1061
I. Extraintestinal Cestodes (Tape Worms)	1029	3. Identification of Fungal Isolates	1067
<i>Echinococcus Granulosus</i>	1029	I. Identification of Filamentous Fungi (Moulds)	1067
<i>Echinococcus Multilocularis</i> and <i>Multiceps Multiceps</i>	1031	Identification Procedures	1068
II. Blood and Tissue Trematodes	1032	Special Techniques	1070
Schistosomes	1032	II. Identification of Yeasts	1072
<i>Paragonimus Westermani</i> (Lung Fluke)	1035	4. Serodiagnosis of Mycotic Infections	1079
III. Blood and Tissue Nematodes	1036	Tests Based on Cell Mediated Immunity (CMI)	1079
Filarial Nematodes	1036	Tests Based on Humoral Antibody Response	1080
The Guinea Worm (<i>Dracunculus Medinensis</i>)	1039	5. Fungal Infections	1082
Tissue Nematodes (<i>Trichinella Spiralis</i>)	1040	I. Superficial Mycoses	1082
<i>Toxocara</i> Species (Animal Roundworm)	1042	II. Subcutaneous Mycoses	1091
<i>Ancylostoma</i> Species (Animal Hookworms)	1042	III. Systemic Mycoses	1096
10. Quality Control Procedures in Parasitology	1043	IV. Opportunistic Mycoses	1102
<u>Part Four: Medical Mycology</u>		<u>Part Five: Basic Immunology and Serodiagnosis</u>	
1. Introduction	1047	1. Introduction	1111
Moulds, Yeasts and Dimorphic Fungi	1047	Terms Commonly used in Immunology	1111
Reproduction in Fungi	1049	Non-Specific Defences	1112
Classes of Fungi	1049	Acquired Immunity (Specific Immune Response)	1113
Asexual Sporulation	1050	Cells and Organs of the Immune System	1114
Classification of Fungal Infections (Mycoses)	1052	Lymphocytes	1114
2. Laboratory Techniques in Mycology	1053	Primary Lymphoid Organs	1116
Collection and Transportation of Specimens	1053	Secondary Lymphoid Tissues	1116
Direct Examination of Specimens	1056	Phagocytes and Phagocytosis	1118
		Inflammation	1120
		2. Antigen, Antibody and Complement	1122
		Antigen	1122

Antibody	1123	Anaesthesia	1220
Complement	1131	Euthanasia	1221
3. Specific Immune Response	1135	Post-Mortem Examinations	1222
Antibody Mediated Immune Response	1135	Health Hazards in the Animal House	1222
Secondary Antibody Response	1138	Characteristics and Handling of	
Significance of Antibody Response	J 138	Laboratory Animals	1222
Cell Mediated Immune Response (CMI)	1139	Mouse	1222
Regulation of Immunity	1141	Rat	1225
Harmful Effects of Immunity	1142	Guinea-Pig	1227
Autoimmunity	1146	Rabbit	1229
Transplant Immunity	1148		
Immunodeficiency Diseases	1149	◆ Section VII Recent Advances in Laboratory	
4. Antigen-Antibody Reaction in Vitro	1151	Science	
Measurement of Antigen and Antibody	1151	1. Introduction to Recent Technologies	1235
Preparation of Simple and Serial		Overview of Molecular Biology	
Dilutions	1152	Techniques	1235
Characteristics of Antigen-Antibody		Basics of Mass Spectrometry	1254
Reactions	1153	Basics of Flow Cytometry	1260
Monoclonal Antibodies	1154	Introduction to Laboratory Informatics	1267
Antigen-Antibody Reactions <i>in Vitro</i>	154	◆ Appendices	
5. Common Serodiagnostic Tests	1177	<i>Appendix A</i>	1273
Detection of Febrile Agglutinins	1177	<i>Appendix B</i>	1275
Antistreptolysin - O (ASO) Test	1183	<i>Appendix C</i>	1279
Serodiagnosis of Syphilis	1184	<i>Appendix D</i>	1280
Tests Using Specific Treponemal		Phosphate Buffer	1280
Antigens	1188	Tris Buffer	1281
Serodiagnosis of Viral Hepatitis	1195	Acetate Buffer	1281
Serodiagnosis of HIV Infection and Aids	1203	Sodium Barbitol Buffer	1282
Serodiagnosis of Infectious		Sodium Carbonate-Bicarbonate	
Mononucleosis (IM)	1205	Buffer	1283
Rheumatoid Factor (RF) Screening Test	1207	Glycine-Sodium Hydroxide Sodium	
Detection of Anti Nuclear Antibodies	1208	Chloride Buffer	1284
Automation in Serodiagnosis	1209	Glycine-Hydrochloric Acid Buffer	1284
		Boric Acid-Borate Buffer	1285
◆ Section VI Small Laboratory Animals		<i>Appendix E</i>	1286
1. Care and Use of Experimental		<i>Appendix F</i>	1287
Animals	1213	1. Temperature	1287
Guiding Principles in the Use of Animals	1213	2. Length	1287
Code of Practice and Staffing	1213	3. Volume	1287
The Animal House	1214	4. Weight	1288
Animal Cages	1215	<i>Appendix G</i>	1289
Maintenance of the Animal House	1216	<i>Appendix H</i>	1292
Animal Selection	1219	<i>Appendix I</i>	1296
Disease Outbreak in the Animal House	1219	<i>Review Questions</i>	1298
		<i>Index</i>	1322
