Preface to the Fourth Edition	v
Preface to the First Edition	vii
Abbreviations	xxx

PART I: PLANT TISSUE CULTURE

1. Introduction	3
New technologies	3
Origin of biotechnology	4
History	5
2. Laboratory Organization	14
Washing facility	14
General laboratory and media preparation area	15
Transfer area	15
Culturing facilities	16
Light units	16
Greenhouses	16
Laboratory and personal safety	17
3. Nutrition Medium	18
Units for solution preparation	19
Media composition	19
Inorganic nutrients	19
Carbon and energy source	21
Vitamins	21
Growth regulators	21
Organic supplements	23
Gelling agent	24
pH	24
Protocol: General methodology for medium preparation	25
4. Sterilization Techniques	28
Preparation of sterile media, containers and small instruments	28
Steam sterilization	28
Units of energy and pressure	29
Dry sterilization	29
Filter sterilization	29
Ultra violet sterilization	30
Maintenance of aseptic conditions	30
Alcohol sterilization	30

- Flame sterilization 30
- Sterilization of explant 30
 - Chemical sterilization 30
- Protocols 31
 - Sterilization of seeds 31
 - Sterilization of buds, leaf, stem, roots, tubers, scales, etc. 31
 - Sterilization of tissue for immature embryos, ovules and flower buds for anther culture 32

5. Types of Culture 33

- Cytodifferentiation 33
 - Vascular differentiation 34
- Organogenic differentiation 36
- Types of culture 37
 - Seed culture 37
 - Embryo culture 38
 - Mature embryo culture 38
 - Immature embryo culture/embryo rescue 39
 - Applications of embryo culture 40
 - Root culture 41
 - Callus culture 42
 - Organ culture 43
 - Nucellus culture 43
 - Application 44
 - Endosperm culture 44
 - Application 45
 - Cell culture 46
 - Protoplast culture 46
- Protocols 46
 - Protocol for seed germination (*Nicotiana*) 46
 - Protocol for embryo culture (Cereals—wheat, maize, barley, rice, etc.) 46
 - Protocol for embryo culture (Legumes—green gram, black gram, French bean, soybean, etc.) 47
 - Protocol for callus induction (*Nicotiana tabacum*) 47
 - Protocol for callus induction (Cereals—wheat, rice, maize, barley, etc.) 48

6. Micropropagation 49

- Axillary bud proliferation approach 50
 - Meristem and shoot tip culture 51
 - Bud culture 53
 - Single node culture 53
 - Axillary bud method 54
- Organogenesis 55
 - Organogenesis via callus formation 56
 - Direct adventitious organ formation 58
- Embryogenesis 59

Advantages of micropropagation	63
Problems associated with micropropagation	65
Protocols	66
Meristem and node culture of potato (<i>Solanum tuberosum</i>)	66
Proliferation of axillary buds (strawberry— <i>Fragaria chiloensis</i>)	66
Organogenesis—adventitious shoot formation	67
Organogenesis via callus formation (<i>Nicotiana</i>)	67
Organogenesis via callus formation (Cereals—wheat, barley, maize, rice, etc.)	67
Embryogenesis (carrot)	68
7. Cell Suspension and Secondary Metabolites	70
Types of suspension cultures	71
Batch culture	71
Continuous culture	72
Open continuous culture	72
Closed continuous culture	73
Semi continuous culture	73
Growth measurements	74
Synchronization of suspension culture cells	74
Technique for single cell culture—Bergmann cell plating technique	75
Application	75
Production of secondary metabolites	76
Morphological and chemical differentiation	77
Medium composition for secondary product formation	78
Growth production patterns	79
Environmental factors	80
Selection of cell lines producing high amounts of a useful metabolite	80
Product release and analysis	81
Application	82
Problems associated with secondary metabolite production	84
Immobilized cell systems	84
Polymers for immobilization	85
Product release	85
Biotransformation	86
Secondary metabolite production using genetically-engineered plant cell cultures	87
Protocols	87
Protocol for cell suspension culture (<i>Nicotiana tabacum</i>)	88
Protocol for cell suspension culture (Cereals—wheat, rice, maize, barley, etc.)	89
8. In Vitro Production of Haploids	91
Androgenic methods	91
Anther culture	92
Microspore culture	94
The various factors governing the success of androgenesis	94
Genotype	94

- Physiological status of the donor plants 94
- Stage of pollen 95
- Pretreatment of anthers 95
- Culture media 95
- Process of androgenesis 96
- The ploidy level and chromosome doubling 96
- Diploidization 97
- Significance and uses of haploids 98
- Problems 100
- Gynogenic haploids 100
- Chromosome elimination technique for production of haploids in cereals (Barley and wheat) 102
- Protocol 103
 - Protocol for anther culture of cereals (Rice, barley, wheat, etc.) 103

9. Protoplast Isolation and Fusion

105

- Protoplast isolation 105
 - Mechanical method 105
 - Enzymatic method 106
 - Physiological state of tissue and cell material 106
 - Enzymes 106
 - Osmoticum 108
 - Protoplast purification 108
 - Protoplast viability and density 109
 - Culture techniques 109
 - Culture medium 110
- Protoplast development 111
- Cell wall formation 111
- Growth, division and plant regeneration 111
- Somatic hybridization 112
 - Protoplast fusion 112
 - Spontaneous fusion 112
 - Induced fusion methods 112
 - Treatment with sodium nitrate 112
 - Calcium ions at high pH 114
 - Polyethylene glycol method 114
 - Electrofusion 114
 - Mechanism of fusion 115
- Identification and selection of hybrid cells 115
 - Chlorophyll deficiency complementation 115
 - Auxotroph complementation 116
 - Complementation of resistance markers 116
 - Use of metabolic inhibitors 117
 - Use of visual characteristics 117
 - Compound selection system 118

Verification and characterization of somatic hybrids	118
Morphology	118
Isoenzyme analysis	118
Chromosomal constitution	119
Molecular techniques	119
Genetic characterization	119
Chromosome number in somatic hybrids	120
Cybrids	120
Potential of somatic hybridization	122
Problems and limitations of somatic hybridization	123
Protocol	125
Protocol for protoplast isolation and fusion	125
10. Somaclonal Variation	130
Nomenclature	130
Schemes for obtaining somaclonal variation	131
Without <i>in vitro</i> selection	131
With <i>in vitro</i> selection	131
Factors influencing somaclonal variation	131
Factors important during <i>in vitro</i> selection of somaclonal variants	133
Application of somaclonal variation	135
Basis of somaclonal variation	139
Disadvantages	142
Gametoclonal variation	142
11. Germplasm Storage and Cryopreservation	146
Cryopreservation	147
Raising sterile tissue cultures	148
Addition of cryoprotectants and pretreatment	148
Air Desiccation-Freezing	148
Pregrowth-Desiccation	148
Encapsulation-Dehydration	148
Vitrification	149
Addition of cryoprotectants	149
Freezing	149
Storage	150
Thawing	150
Determination of survival/viability	151
TTC method of staining	151
Evan's blue staining	151
Plant growth and regeneration	151
Slow growth method	151
Temperature	152
Low oxygen pressure	152
Nutrient restriction	152

- Growth regulators 152
- Osmotics 152
- Achievements 152
- Applications 153
- Limitations 153

PART II: GENETIC MATERIAL AND ITS ORGANIZATION

- 12. Genetic Material** **157**
- Sugars 158
 - Amino acids 159
 - Nucleotides 159
 - Structural formulae of nucleotides 160
 - Nomenclature of nucleoside and nucleotide compounds 160
 - Polynucleotides 162
 - Significance of differences between DNA and RNA 163
 - Shorthand notation for polynucleotide structure 164
 - Genetic material 164
 - Discovery of DNA 165
 - Double helix is a stable structure 166
 - DNA replication 166
- 13. Organization of DNA and Gene Expression** **169**
- Different forms of DNA 169
 - DNA supercoiling—Tertiary structure of DNA 171
 - Linking number 172
 - Cruciform—Tertiary structure of DNA 172
 - Eukaryotic DNA organization into nucleosomes 172
 - DNA content 173
 - Denaturation 175
 - DNA renaturation 175
 - Renaturation rate and DNA sequence complexity—*Cot* curves 176
 - Flow of genetic information: central dogma 177
 - Organization of genes in DNA molecules 177
 - Operon 179
 - Multigene family 179
 - Plant gene structure as discontinuous gene 179
 - Control sequences 180
 - TATA box 181
 - AGGA box 181
 - Other regulatory elements 181
 - Types of RNA molecules 181
 - Messenger RNA and processing 181
 - Ribosomal RNA 183
 - Transfer RNA 184
 - Small nuclear RNA 184

- Transcription 185
 - Nucleotide sequences 185
 - Transcription in prokaryotes 186
 - Transcription in eukaryotes 188
- Genetic code and translation 189
 - Genetic code 189
 - Translation 191
 - Post-translational modifications 193

PART III: RECOMBINANT DNA TECHNOLOGY

- 14. Basic Techniques** 197
 - Agarose gel electrophoresis 197
 - Pulsed field gel electrophoresis 198
 - Polyacrylamide gel electrophoresis 201
 - Isoelectric focusing 202
 - Two-dimensional gel electrophoresis 203
 - Nucleic acid blotting 204
 - Southern blot analysis 204
 - Northern blot analysis 206
 - Protein blotting 207
 - Western blot analysis 207
 - Dot blot technique 208
 - Autoradiography 208
 - E. coli* transformation 210
 - Protocol 211
 - Agarose gel electrophoresis 211
- 15. Gene Cloning: Cutting and Joining DNA Molecules** 213
 - Enzymes for cutting: Restriction endonucleases 214
 - Type I endonucleases 216
 - Type II endonucleases 216
 - Type III endonucleases 219
 - Other restriction enzymes 219
 - Joining DNA molecules 219
 - DNA ligase 220
 - DNA-modifying enzymes 220
 - Kinase 220
 - Alkaline phosphatase 221
 - DNA polymerase 221
 - Terminal transferase 222
 - S 1-Nuclease 222
 - λ -Exonuclease 222
 - Exonuclease III 222
 - Bal 31 nuclease 222

Linkers and adaptors 222
Protocol 224
Restrictive digestion of plasmid DNA 224

16. Gene Cloning: Vectors

226

Cloning vectors—features 226
Biology of *E. coli* K-12 226
Plasmids 227
Yeast plasmid vectors 233
Ti plasmids 236
Cosmids 236
Bacteriophage vectors 236
Biology of bacteriophage λ 238
M13 phage 242
Phagemids 243
Yeast artificial chromosome (YAC) 244
Bacterial artificial chromosome (BAC) 244
P1 phage vectors 247
P1 derived artificial chromosome (PAC) 247
Shuttle vectors 247
Expression vectors 248
Protocols 248
Isolation of plasmid DNA: mini preparation 248
Isolation of genomic DNA by SDS-Proteinase K method 249

17. Gene Cloning: cDNA and Genomic Cloning and Analysis of Cloned DNA Sequences 251

Gene libraries 251
cDNA cloning 251
Isolation of mRNA 252
Synthesis of first strand of cDNA 252
Synthesis of second strand of cDNA 252
Cloning of cDNA 255
Introduction to host cells 255
Clone selection 255
Genomic cloning 255
Isolation of DNA 256
Partial digestion 256
Ligation of fragment to a vector 258
Packaging 258
Identification and analysis of cloned genes 258
Probes 258
Approaches for identification of genes 260
Colony and plaque hybridization 260
Immunological detection 260
Southern blot analysis of cloned genes 260

Detection of nucleic acid sequences	262
Radioactive labeling	262
Nick translation	262
Random primed	263
Probe preparation by PCR	264
Nonradioactive labeling	264
Horseradish peroxidase system	264
DIG	264
Biotin-streptavidin	266
DNA sequencing	266
Sanger-Coulson method	266
Maxam-Gilbert method	268
High throughput DNA sequencing	271
18. Polymerase Chain Reaction	274
Procedure	276
Components in a polymerase chain reaction	278
Inverse PCR	280
Reverse transcriptase mediated PCR (RT-PCR)	280
RACE: Rapid amplification of cDNA ends	282
Quantitative RT-PCR	282
Amplification of differentially expressed genes	284
Differential display reverse transcriptase PCR	284
Suppression subtraction hybridization	286
Cloning of PCR products	287
Restrictive site addition	289
T/A cloning	289
Blunt end ligation	290
Genetic engineering by PCR	290
Applications	290
Advantages	293
Problems	293
Protocol	293
PCR for detection of transgenes	293
19. In Vitro Mutagenesis	295
Site directed mutagenesis	295
Deletion mutagenesis	296
Unidirectional deletions	296
Gap sealing mutagenesis	296
Linker scanning mutagenesis	297
Cassette mutagenesis	299
Oligonucleotide-directed mutagenesis	300
Gapped duplex method	302
dUTP incorporation strategy	304
Phosphorothioate method	305

Chemical mutagenesis	305
PCR mediated <i>in vitro</i> mutagenesis	308
Random mutagenesis	311
Insertional mutagenesis	312
Transposon mediated insertional mutagenesis	312
T-DNA mediated insertional mutagenesis	313
20. Transposon Genetic Elements and Gene Tagging	316
Transposable elements in bacteria	316
IS elements	317
Composite transposons	318
Complex transposons	319
Transposable elements in eukaryotes	320
Classification	320
Class I elements	320
Retroviruses	320
LTR retrotransposons	322
Non-LTR retrotransposons	323
Class II elements	324
<i>Ac-Ds</i> elements	325
<i>En/Spm</i> transposable element family	326
Transposon gene tagging	328
Isolation of transposable element	329
Gene tagging	329
Characterization of transposon insertion mutation	331
Isolation of mutant gene	331
Isolation of intact gene	331
Transposon tagging in heterologous species	331
Significance (mutations, gene expression, vector development)	334
21. Gene Isolation	337
Chromosome maps	337
Genetic map	337
Physical map	337
General strategies for cloning genes from plants	338
Isolation of genes coding for specific proteins	338
Isolation of genes which are tissue specific in function	338
Cloning methods based on DNA insertions	339
Subtractive cloning	340
Map based cloning	342
Identification of DNA markers linked to target gene and construction of genetic maps	342
Construction of high resolution physical map	346
Chromosome walking	346
Gene identification and testing by transformation	348
BLAST search	348

Comparative sequence analysis	349
Gene expression analysis	349
Genomic DNA Transformation	349
cDNA transformation	349
RNA interference (RNAi)	350
Chromosome jumping	351
Chromosome landing approach	351
22. Molecular Markers and Marker-assisted Selection	356
Morphological markers	356
Biochemical markers	357
Molecular markers	357
History of evolution of molecular markers	358
Non-PCR based approaches	359
RFLP (Procedure, construction of RFLP maps, uses of RFLP)	359–369
PCR based techniques	369
Random amplified polymorphic DNA (RAPD) markers	369
DNA amplification fingerprinting (DAF)	372
Arbitrarily primed polymerase chain reaction (AP-PCR)	372
Amplified fragment length polymorphism (AFLP)	372
Simple sequence repeats (SSR) or Microsatellites	374
Microsatellite directed PCR: Unanchored primers	375
Microsatellite directed PCR: Anchored primers	375
Random amplified microsatellite polymorphism (RAMP)	376
Selective amplification of microsatellite polymorphic loci	377
Retrotransposon-based Markers	377
Sequence-specific Amplified Polymorphism (S-SAP)	378
Inter-retrotransposon Amplified Polymorphism (IRAP)	379
Retrotransposon-microsatellite Amplified Polymorphism (REMAP)	379
Retrotransposon-based Insertional Polymorphism (RBIP)	379
Targeted PCR and sequencing	379
Sequence tagged sites	380
Sequence tagged microsatellites (STMs)	380
Sequence characterized amplified regions (SCARS)	382
Cleaved amplified polymorphic sequences (CAPS)	382
Sequence related amplification polymorphism (SRAP)	383
Advantages of targeted PCR and sequencing approaches	383
Disadvantages	383
Single Nucleotide Polymorphism (SNP)	383
Molecular markers and plant diversity	385
Fingerprinting	385
Marker assisted selection	388
Nearly isogenic line (NIL) strategy	388
Bulk segregant analysis (BSA)	388

Protocol 392
Protocol for RAPD analysis 392

23. Gene Transfer in Plants

398

Transient and stable expression 398
Marker genes 399
Reporter genes 399
Opine synthase 400
Chloramphenicol acetyl transferase 400
Beta glucuronidase (GUS) 400
Bacterial luciferase (Lux F2) 401
Firefly firefly luciferase (Luc) 401
Green fluorescent protein (GFP) 401
Anthocyanins 401
Selectable markers 402
Antibiotic resistance markers 402
Antimetabolite marker 403
Herbicide resistance markers 403
Chimeric gene vectors 406
Gene transfer methods 407
Vector mediated gene transfer methods 407
 Agrobacterium mediated DNA transfer 407
 Classification of *Agrobacteria* 407
 Tumor inducing principle and the Ti plasmid 408
 Organization of Ti plasmid 409
 T-DNA transfer 412
 Agrobacterium vectors 414
 Cointegrate vectors 414
 Binary vectors 415
Transformation techniques using *Agrobacterium* 417
Agrobacterium mediated virus infection—Agroinfection 419
Viruses mediated gene transfer 420
 Caulimoviruses 420
 Gemini viruses 422
 RNA viruses 423
Vectorless or direct DNA transfer 424
Physical gene transfer methods 425
 Electroporation 425
 Particle bombardment/microprojectile/biolistics 426
 Macroinjection 429
 Microinjection 429
 Liposome mediated transformation 429
 Silicon carbide fiber mediated transformation 430
 Ultrasound mediated DNA transformation 431
 DNA transfer via pollen 431

Chemical methods	431	
PEG mediated gene transfer	431	
Calcium phosphate co-precipitation	432	
The polycation DMSO technique	432	
DEAE dextran procedure	432	
Status and expression of transferred genes	433	
Gene silencing	433	
Detection of intrusive DNA	433	
Causes of gene silencing	434	
DNA methylation	434	
Homology dependent gene silencing	434	
Suppression by antisense genes	435	
Silencing by RNA interference	436	
Position effect	437	
Increased copy number	438	
Strategies for avoiding gene silencing	438	
Methods for removal of marker genes	438	
Co-transformation	438	
Removal of marker genes by transposases	439	
Transplastomics to overcome pollen gene transfer	439	
Modulation of marker gene expression	439	
Selectable markers and safety	439	
Protocols	440	
<i>Agrobacterium</i> mediated transformation	440	
Gene transfer by biolistic method: transient expression	441	
24. Chloroplast and Mitochondrion DNA Transformation		444
Chloroplast Transformation	444	
The Plastid chromosome	445	
Selectable markers	446	
Dominant antibiotic resistance markers (Positive selection markers)	446	
Recessive selectable markers (Positive selection markers)	446	
Secondary positive selection markers	447	
Negative selection markers	447	
Transformation methods	447	
<i>Agrobacterium</i> mediated transformation	447	
Particle gun method	448	
Gene replacement	449	
Gene insertion	450	
Other possible methods for introduction of DNA into plastids	451	
PEG-mediated transformation	451	
Galistan expansion femtosyringe	451	
DNA uptake by chloroplasts <i>in vivo</i>	451	
Microinjection of DNA into chloroplast <i>in vivo</i>	451	
DNA uptake by chloroplasts <i>in vitro</i>	452	

- Homoplastomic lines development 452
- Advantages 453
- Applications 454
- Limitations of Chloroplast Transformation 456
- Mitochondrion transformation 456
- Targetting of Transgene Product into Chloroplasts and Mitochondria 457

25. Transgenics in Crop Improvement

459

- Resistance to biotic stresses 460
 - Insect resistance 460
 - Resistance genes from microorganisms 460
 - Bt toxin gene 460
 - Other microorganism derived resistance genes 461
 - Resistance genes from higher plants 461
 - Proteinase inhibitors 461
 - Cowpea trypsin inhibitor gene (*CpTI*) 461
 - α -Amylase inhibitor 462
 - Lectins 462
 - Resistance genes from animals 462
 - Virus resistance 462
 - Coat protein mediated cross protection 462
 - Non-structural protein mediated resistance 463
 - Antisense and sense mediated resistance 465
 - Satellite RNA protection 465
 - Defective interfering RNAs 465
 - Pathogen targeted resistance 466
 - Mammalian oligoadenylate synthase gene 466
 - Ribozyme mediated resistance 466
 - Disease resistance 467
 - Pathogenesis related proteins 467
 - Anti-microbial proteins 467
 - Engineering toxin insensitivity 469
 - Phytoalexins 469
 - Manipulation of disease resistance genes 470
 - Resistance to abiotic stresses 470
 - Herbicide resistance 473
 - Transgenics for quality 474
 - Transgenics for improved storage 474
 - Longer life transgenic flowers 476
 - Transgenic for flower color and shape 476
 - Transgenics for male sterility 477
 - Transgenics for terminator seed 478
 - Mechanism in pure line seed production 479
 - Terminator technology for use in hybrid seed production 481

Transgenic plants as bioreactors	482
Carbohydrates	482
Lipids	482
Protein quality	484
Enzymes	484
Vitamin and mineral	485
Biodegradable plastic	486
Proteins, peptides and vaccines	486
Production of edible vaccine antigens	487
Antibody Production in Plants (Plantibody)	488
Production of Pharmaceutically Important Proteins in Plants	490
26. Impact of Recombinant DNA Technology	497
Agriculture	497
Status of transgenic crops	497
Benefits of transgenic crops	502
Biotech crops in India	203
Insect resistant plants through transgenic approach	506
Advantages	506
Limitations/Apprehensions	507
Strategies for resistance management	507
Herbicide tolerant plants through transgenic approach	510
Arguments in favor of herbicide tolerance in crop plants	510
Arguments against herbicide tolerant transgenics in crop plants	510
Plant based pharmaceuticals	511
Production of biofuels	511
Transgenic crops in future	512
Biotechnology in Process Industry	513
Bioremediation	513
Healthcare applications	514
Future	514
27. Biosafety Concerns and Regulatory Framework	520
Risk analysis	521
Risk assessment	521
Risk management	523
Risk monitoring	523
Risk communication	523
Containment	524
Biological containment	524
Physical containment	524
Biosafety levels	525
Good laboratory practices	525
Risk Management in Field Trials	527
Physical strategies for confinement	527

- Biological strategies for confinement 527
- Other procedures 527
- General precautions 528
- National Biosafety Regulatory framework in India 528
 - Recombinant DNA Advisory Committee 529
 - Institutional Biosafety Committee 529
 - Review Committee on Genetic Manipulation 529
 - Genetic Engineering Approval Committee 530
 - State Biotechnology Coordination Committee 530
 - District Level Committee 530
- Recombinant DNA Safety Guidelines 530
- Revised Guidelines for Research in Transgenic Plants 531
- Cross border movement of transgenic germplasm for research purposes 532
- Biosafety concerns 533
- Risk to human health 533
 - Risk of toxicity 533
 - Risk of allergies 534
 - Antibiotic resistance 536
 - Eating foreign DNA 538
 - Use of promoters of virus origin 538
 - Changes in nutritional level 539
- Risk to environment 539
 - Gene flow or dispersal from transgenics 539
 - Strategies to Prevent Gene Flow of Transgene Escape 542
 - Resistance/tolerance of target organisms 543
 - Generation of new live viruses/super viruses 543
 - Recombination 543
 - Transcapsidation 543
 - Ecological issues 544
 - Increased weediness 544
 - Creation of super-weeds 544
 - Loss of biodiversity/reduction of cultivars 545
 - Non-target effects 546
 - Persistence of the transgene or transgene product 547
 - GM crops affect the purity of other crops 547
 - Increased use of chemicals 548
 - Effect on Rhizosphere and microflora 548
 - Unpredictable gene expression or transgene instability 548
- Socio-economic and ethical considerations 548
- International protocols and conventions on biosafety 550
 - Cartagena Protocol on Biosafety 550
 - WTO and other International Agreements 553
- Regulatory frameworks in different countries 553
 - USA 553

European Union 554
Canada 554
Australia 554
Argentina 555
Asian Region 555

28. Genomics

557

Mapping of prokaryotic genomes 557
 E. coli genome 558
Mapping of eukaryotic genomes 558
 Construction of linkage maps with molecular markers 559
 Gene libraries 560
 Screening of libraries and constructing contigs 560
 Sequencing 561
 New vectors BACs and PACs and the shot gun approach 561
Gene location in DNA sequences 561
 Sequence inspection 562
 Experimental techniques 563
 Hybridization tests 563
 cDNA sequencing 563
Yeast (*S. cerevisiae*) genome 564
Human genome 564
Arabidopsis genome 567
Rice genome 569
Functional genomics 572
 Computer analysis 572
 Experimental analysis 573
 Gene inactivation 574
 Gene overexpression 575
 Phage display 577
 Yeast two hybrid system 579
Patterns of gene expression 580
 Gene expression assays by measuring levels of RNA transcripts 580
 SAGE 580
 DNA chip technology 582
 Oligonucleotide based chips 582
 cDNA based chips 585
 Hybridization and detection methods 585
 Double stranded DNA chips 586
 Characteristic features of DNA chips/microarrays 586
 Applications of DNA chips 587
Proteomics 588
Metabolomics 591
 Terminology 592
 Target analysis 592

- Metabolite profiling 592
- Metabolomic approaches 592
- Metabolic fingerprinting 592
- Analytical Techniques 593
- Metatolomics is an important tool for functional genomics 593
- Phenomics 594

29. Bioinformatics

597

- Development of Bioinformatics 599
- Role of Internet in Bioinformatics 601
- Online 602
- Browsing working and downloading 602
- Sequences and Nomenclature 602
- File Formats 604
- Files of Structural data 605
- Submission of Sequences 605
- Databases 605
 - Primary sequence databases 605
 - Subsidiary (Secondary) sequence databases 606
 - Composite databases 606
- Molecular Biology Databases 607

PART IV: GENOME EDITING TECHNOLOGY

- 31. Genome Editing** **657**
- Genome editing tools 658
 - Zinc finger nucleases (ZFN) 658
 - Transcription activator like effector nucleases (TALENs) 659
 - Clustered regularly interspaced short palindromic repeats 659
 - Classification of CRISPR-Cas immune system 661
 - Cas9 nucleases 661
 - Cas12 nucleases 664
 - Cas8 nuclease 664
 - Mechanism of action 665
 - Double stranded breaks repair options 665
 - Precise genome editing 666
 - Cytosine base editing 667
 - Mechanism 667
 - Adenosine base editing 668
 - Dual based editing 670
 - CBE based prime deletion system 670
 - Prime editing 670
 - CRISPR–Cas9 plasmid construction and delivery system 670
 - DNA free genome editing delivery systems 673
 - Protoplast mediated 673
 - Biolistic method 673
 - Agrobacterium* mediated 673
 - Use of morphogenetic regulators for *de novo* meristem induction method 673
 - Virus assisted gene editing 674
 - Use of haploid inducers 674
- 32. Genome Editing: Applications** **678**
- Application of ZFNs and TALENS in crop improvement 679
 - Application of CRISPR-Cas in crop improvement 680
 - Biotic stress resistance 680
 - Abiotic stress resistance 683
 - Salt stress 683
 - Drought resistance 686
 - Cold and heat stress 686
 - Metal toxicity 687
 - Herbicide tolerance 687

Improving yield and quality	687	
Reduction in anti-nutritional factors	689	
Increased shelf-life	689	
Multiplexing and trait stacking in crop breeding	689	
Haploid induction	689	
Generation of male sterile lines	689	
Induction of apomixis for fixation of hybrid vigour	692	
Manipulating self incompatibility	692	
Accelerated domestication	692	
Genome edited products	693	
Commercially released crops	693	
Database	694	
Problems and future prospects	694	
33. Genome Editing: Regulatory Aspects		703
Genome editing v/s transgenesis	703	
Gene editing in terms of site directed nucleases	704	
Regulatory policies	704	
India	705	
USA	706	
Canada	708	
South American countries	708	
European Union	708	
United Kingdom	709	
Australia	709	
New Zealand	710	
Japan	710	
Asian countries	710	
China	710	
Pakistan	711	
African countries	711	
<i>Appendices</i>		713
<i>Glossary</i>		717
<i>Author index</i>		739
<i>Subject index</i>		749

Abbreviations

2,4-D	2,4-Dichlorophenoxyacetic acid
IAA	Indole-3-acetic acid
IBA	Indole-3-butyric acid
NAA	Naphthaleneacetic acid
pCPA	p-Chlorophenoxyacetic acid
BAP or BA	Benzylamino 'purine or benzyladenine
2iP	2-Isopentenyladenine
Kin	Kinetin
Zea	Zeatin
ABA	Abscisic acid
A.t.	<i>Agrobacterium tumefaciens</i>
B ₅	Gamborg's medium
DMSO	Dimethylsulfoxide
GA	Gibberellic acid
kb(p)	Kilobase (pairs)
LS	Linsmaier and Skoog medium
Mb	Megabase
Mdal	Magadalon
MS	Murashige and Skoog medium
ng	Nanogram
PAGE	Polyacrylamide gel electrophoresis
pg	Picogram
Ri	Root inducing plasmid of <i>Agrobacterium rhizogenes</i>
SH	Schenk and Hildebrandt medium
Ti	Tumor inducing plasmid of <i>Agrobacterium tumefaciens</i>
