

Design of Machine Elements II DME II

Second
Edition

is written in accordance with the syllabus of Visvesvaraya Technological University (VTU) for sixth semester students of mechanical engineering course. It also covers the syllabi of KTU, Kerala, and similar Indian Technological Universities, Institutions, and State Boards of Technical Education. The book is concise and concepts can be easily understood. Different approaches have been discussed in detail to solve similar problems.

At the end of each chapter, more than 50 VTU question papers are given for the students as exercise problems; some of these problems are solved. Another popular CBS source book *Design Data Handbook for Mechanical Engineers*, fourth edition by K Mahadevan | K Balaveera Reddy has been used as reference in preparing the material of this book.

Salient features:

- Follows a simple approach.
- Presents a collection of more than 50 VTU question papers at the end of each chapter as exercise problems.
- Structured and designed as per VTU syllabus.

K Raghavendra is currently Assistant Professor, Department of Mechanical Engineering, Ballari Institute of Technology and Management (BITM), Ballari, Karnataka. He graduated from RYME College, Ballari, and obtained his postgraduation from Bangalore Institute of Technology (BIT), Bangalore, under Visvesvaraya Technological University (VTU), Belagavi.

He started his teaching career as Lecturer in VVS Polytechnic, Ballari, followed as Lecturer at RYME College, Ballari, before joining as Assistant Professor at BITM, Ballari. He has also worked as a CAD designer for civil works.

*In loving memory
of
my father
Late Sri K Sivaramulu*

Preface to the Second Edition

This edition of *Design of Machine Elements II (DME II)*, is presented after thorough revision. I am thankful to the readers who have adopted this book as a textbook | reference book.

The book has been organized into 13 chapters. Additional topics relevant to the subject within the scope of the syllabus have been added wherever applicable. A number of problems have been solved covering the basic concepts to various methods.

The book is structured as per latest VTU syllabus. Old chapters from various schemes have been retained in the book. A detailed comparison of the syllabus across various schemes is provided for ease of reference. At the end of each chapter, 50+ question from VTU question papers are given as exercise problems.

In this edition, the entire book has been updated as per 4th edition of *Design Data Handbook for Mechanical Engineers*, by Prof K Balaveera Reddy and Prof K Mahadevan.

I am thankful to my family members for their continuous support and encouragement in preparing this book.

Salient Features

- Standardized chapter organization according to the choice based credit system (CBCS)
- Detailed explanation using different methods with relevant illustration
- New examples have been added throughout the book
- Numerous practice problems at the end of each chapter
- VTU questions as exercise problems for self-study and practice at the end of each chapter.
- Use of Design Data Handbook (4/e)

K Raghavendra

Preface to the First Edition

It gives me a great satisfaction in presenting this book titled *Design of Machine Elements II (DME II)*, written according to the syllabus prescribed by VTU, Belagavi, for VIth semester students of Mechanical Engineering and Industrial Production Engineering

The manuscript is based on the lectures delivered by the author with reference to the fourth edition of *Design Data Handbook for Mechanical Engineers* by Prof K Mahadevan and Prof K Balaveera Reddy. The concepts are presented in simple and lucid language to explain the subject within the scope of the topics given in the syllabus.

I owe my gratitude to my mother Smt B Susheela, whose blessings inspired me in bringing out this book. I am thankful to my wife Smt V Radhika, son Chi K Naga Ganesh for their continuous support and encouragement in preparing this book.

I would like to express my sincere thanks to Dr Kori Nagaraj, Professor and Head, Department of Mechanical Engineering, RYME College, Ballari; Dr Yadavalli Basavaraj, Professor and Head, Department of Mechanical Engineering, BITM, Ballari, for their support and cooperation while preparing the manuscript.

Last but not the least, I would like to thank the entire team of CBS Publishers & Distributors, New Delhi for making all possible efforts in the publication of this book.

K Raghavendra

Contents

<i>Preface to the Second Edition</i>	<i>vii</i>
<i>Preface to the First Edition</i>	<i>ix</i>
<i>Syllabus</i>	<i>xvii</i>
1. DESIGN OF CURVED BEAMS	1
1.1 Introduction	1
1.2 Difference between a Straight Beam and a Curved Beam	1
1.3 Stresses in Curved Beams (Winkler-Bach Equation)	2
1.4 Steps to Solve Curved Beam Problems	6
1.5 Stresses in Closed Rings	39
1.6 Chain Links	47
1.7 Condition for Bending Stress at Extreme Fibers to be Numerically Equal	75
VTU Question Papers	82
2. CYLINDER AND CYLINDER HEADS	97
2.1 Thin Cylinders	97
2.2 Thin Cylindrical Shells Subjected to Internal Pressure	97
2.2.1 Circumferential/Tangential/Hoop Stress	98
2.2.2 Longitudinal or Axial Stress	99
2.2.3 Maximum Shear Stress	100
2.3 Thick Cylinders	100
2.4 Difference between Thick and Thin Cylinders	101
2.5 Lamé's Theory	101
2.6 Wall Thickness	106
2.6.1 For Brittle Materials	106
2.6.2 For Ductile Materials	107
2.7 Birnie's Equation	107
2.8 Clavarino's Equation	108
2.9 Barlow's Equation	108
2.10 Changes in Cylinder Diameter	108
2.11 Autofrettage/Self-hooping	108
2.12 Compound or Composite Cylinders	117
2.12.1 Tangential Stresses	119
2.12.2 Radial Stresses	120
2.13 Total Allowance or Interference	123
2.14 Forces and Torques in Interference Fits	124
2.15 Stresses due to Forces and Shrink Fits	124
2.16 Cylinder Heads (End Closures)	152
2.16.1 Flat Heads	152
2.16.2 Spherical Dished Covers	153
2.16.3 Shells Subjected to Internal Pressure	154
2.16.4 Thickness of Stayed and Braced Plates	154
2.16.5 Unstayed Flat Heads	154
VTU Question Papers	160
3. BELT, ROPE AND CHAIN DRIVES	168
3.1 Introduction	168
3.2 Selection of a Belt Drive	168
3.3 Materials Used for Belts	168
3.4 Flat Belt Drives	169
3.5 Length of Open Belt Drive	169
3.6 Length of Cross Belt Drive	171
3.7 Center Distance	172
3.8 Velocity Ratio of Belt Drive	173
3.9 Ratio of Driving Tensions in Flat Belts	174

3.10 Centrifugal Tension	176
3.11 Ratio of Driving Tensions in Flat Belts Considering Centrifugal Tension	177
3.12 Power Transmitted by Flat Belts	179
3.13 Condition for Maximum Power Transmission	180
3.14 Initial Tension in the Belt	181
3.15 Effect of Initial Tension on Flat Belts	182
3.16 Forces in Flat Belt	183
3.17 Idler or Jockey Pulley	183
3.18 Relation Between Diameter of Pulley and Thickness	184
3.19 Design Procedure for Flat Belts	197
3.20 V-Belts	207
3.21 Advantages and Disadvantages of V-Belt over Flat Belt	207
3.22 Types of V-Belts	207
3.23 Dimensions of a Standard V Grooved Pulley	208
3.24 Power Transmission	208
3.25 Number of Belts	209
3.26 Center Distance	209
3.27 Pitch Length of the Belt	209
3.28 Ratio of Driving Tensions in V-Belt	210
3.29 Design Procedure for V-Belts	222
3.30 Wire Ropes	237
3.31 Choice of a Wire Rope	238
3.32 Stresses in Hoisting Ropes	238
3.33 Drum and Sheave Diameters	239
3.34 Causes of Wire Rope Failure	239
3.35 Applications of Wire Ropes	240
3.36 Chain Drives	249
3.37 Classification of Chains	250
3.38 Velocity Ratio of Chain Drives	250
3.39 Minimum Number of Teeth on Sprocket	251
3.40 Center Distance	251
3.41 Chain Length	251
3.42 Power Transmitted	252
3.43 Minimum Number of Strands in a Chain	252
3.44 Actual Factor of Safety	252
3.45 Definitions	252
3.46 Design Procedure for Chain Drives	253
VTU Question Papers	265

4. SPRINGS

277

4.1 Introduction	277
4.2 Classification	277
4.3 Terms in Compression Springs	278
4.4 Spring Materials	280
4.5 End Connections for Helical Compression Springs	281
4.6 Surge in Springs	282
4.7 Stresses in Helical Coil Springs—Circular Wire	282
4.8 Deflection in Helical Coil Springs—Circular Wire	284
4.9 Energy Stored in Helical Coil Springs—Circular Wire	285
4.10 Buckling of Helical Compression Spring	286
4.11 Design Procedure for Helical Springs	286
4.12 Spring Scale (F_s)	303
4.13 Stresses and Deflection in Helical Springs—Non-Circular Wire	323
4.14 Concentric Springs or Co-axial Springs or Composite Springs or Nested Springs	327
4.15 Springs Subjected to Fatigue/Fluctuating Loads	336
4.16 Helical Torsion Springs	343
4.17 Belleville or Disc Springs	348
4.18 Leaf Springs	353
4.19 Laminated Spring	355
4.20 Semi-Elliptical Laminated Spring	356

4.21 Equalized Stresses in Springs—Nipping	360
VTU Question Papers	382
5. SPUR GEARS	398
5.1 Introduction to Gears	398
5.2 Classification of Gears	398
5.3 Advantages of Gear Drive	398
5.4 Disadvantages of Gear Drive	398
5.5 General Profiles of Gear Tooth	398
5.5.1 Comparison Between Involute and Cycloidal Teeth	399
5.6 System or Pressure Angles of Gear Tooth	399
5.7 Terms Used in Gears	399
5.8 Gear Materials	402
5.9 Design Consideration for Gear Drive	402
5.10 Methods of Gear Drive	403
5.11 Introduction to Spur Gears	403
5.12 Beam Strength of a Gear Tooth: Lewis Equation	403
5.13 Velocity Factor (C_v)	406
5.14 Allowable Stress (σ)	406
5.15 Design Methodology for Spur Gears	406
5.16 Strength Factor	407
5.17 Tangential Load (F_t)	407
5.18 Forces Acting on Spur Gears	407
5.19 Dynamic Tooth Load (F_d)	408
5.20 Dynamic Load Factor	409
5.21 Beam Strength or Endurance Strength or Static Tooth Load (F_{en})	409
5.22 Wear Tooth Load (F_w)	409
5.23 Velocity Ratio (i)	410
5.24 Methods of Gear Failure	410
5.25 Design Procedure for Spur Gear Problems	411
5.26 Design Alterations for a Spur Gear	412
5.27 Basic Problems	413
5.28 Problems on Forces and Stresses	416
5.29 Problems Based on Unknown Diameter or Unknown Distance	418
5.30 Problems Based on Known Diameter or Known Center Distance	464
5.31 Problems on Power	485
VTU Question Papers	494
6. HELICAL GEARS	505
6.1 Introduction	505
6.2 Advantages and Disadvantages of Helical Gear	505
6.3 Comparison Between Spur and Helical Gears	505
6.4 Terms Used in Helical Gears	506
6.5 Proportions of Helical Gear	507
6.6 Face Width (b)	509
6.7 Virtual or Formative Number of Teeth (z_v)	509
6.8 Force Analysis of Helical Gears	510
6.9 Strength of a Helical Gear	512
6.10 Design Methodology for Helical Gears	512
6.11 Dynamic Tooth Load (F_d)	513
6.12 Beam Strength or Endurance Strength (F_{en} or F_s)	513
6.13 Wear Tooth Load (F_w)	514
6.14 Herringbone Gears	514
6.15 Design Procedure for Helical Gear Problems	515
6.16 Basic Problems	516
6.16.1 Problems on Transverse or Circular Pitch ($p = p_c$) or (p_t)	516
6.16.2 Problems on Diametral Pitch (p_d)	517
6.16.3 Problems on Normal Diametral Pitch (p_{dn})	523
6.16.4 Problems on Normal Module (m_n)	524
6.17 Problems Based on Forces and Stresses	528
6.18 Problems Based on Unknown or Unknown Center Distance	530

6.19 Problems Based on Known Diameter or Known Center Distance	552
6.20 Problems on Herringbone Gears	575
6.21 Problems on Power	580
6.22 Problems on Factor of Safety	589
VTU Question Papers	591
7. BEVEL GEARS	597
7.1 Introduction	597
7.2 Classification	597
7.3 Types of Tooth on Bevel Gears	598
7.4 Applications	598
7.5 Advantages and Disadvantages	599
7.6 Terminology	599
7.7 Pitch Angle of Bevel Gears	599
7.8 Forces Acting on Bevel Gear	601
7.9 Other Relations	602
7.10 Strength of a Bevel Gear	602
7.11 Dynamic Load (F_d)	604
7.12 Static Tooth Load or Beam Strength or Endurance Strength (F_{en})	604
7.13 Wear Tooth Load (F_w)	605
7.14 Formative Number of Teeth (z_e)	605
7.15 Power Transmitted	605
7.16 Design Methodology for Bevel Gears	605
7.17 Design Procedure for Bevel Gear Problems	606
7.18 Basic Problems	607
7.19 Problems on Forces and Stresses	609
7.20 Problems Based on Unknown Diameter or Unknown Center Distance	612
7.21 Problems Based on Known Diameter or Known Center Distance	637
7.22 Problems on Miter Gears	649
7.23 Problems on Power	655
7.24 Problems on Factor of Safety	664
VTU Question Papers	667
8. WORM GEARS	675
8.1 Introduction	675
8.2 Characteristics of Worm Gears	675
8.3 Advantages and Disadvantages	675
8.4 Applications	676
8.5 Designation of Worm Gears	676
8.6 Worm Gear Design Parameters	676
8.7 Worm and Worm Gear Terminology	676
8.8 Strength of a Worm Gear (F_t)	679
8.9 Dynamic Strength (F_s)	680
8.10 Materials for Worm and Worm Gears	680
8.11 Force Analysis of Worm Gears	681
8.12 Efficiency of Worm Gears	682
8.13 Wear Tooth Load (F_w)	683
8.14 Thermal Capacity of Worm Gears	683
8.15 Power Rating	684
8.16 Basic Problems	684
8.17 Problems on Forces, Stresses and Efficiency	692
8.18 Design Procedure for Worm Gear	699
8.19 Problems Based on Unknown Diameter or Unknown Center Distance	700
8.20 Problems Based on Known Diameter or Known Center Distance	715
8.21 Problems on Power	721
VTU Question Papers	732
9. DESIGN OF CLUTCHES	739
9.1 Introduction to Clutches	739
9.2 Classification of Clutches	739
9.2.1 Positive Clutches	739
9.2.2 Friction Clutches	740

9.3 Single Plate or Disc Clutch	740	
9.4 Multi-Plate Clutch	740	
9.5 Difference Between Single Plate and Multi-Plate Clutches	741	
9.6 Torque Analysis of Plate or Disc Clutche	741

DESIGN OF MACHINE ELEMENTS II (DME II)

Sub Code: 18ME62

6th Semester

MODULE 1

Springs: Types of springs, spring materials, stresses in helical coil springs of circular and non-circular cross sections. Tension and compression springs, concentric springs; springs under fluctuating loads.

Leaf Springs: Stresses in leaf springs, equalized stresses, and nipping of leaf springs. Introduction to torsion and Belleville springs.

Belts: Materials of construction of flat and V belts, power rating of belts, concept of slip and creep, initial tension, effect of centrifugal tension, maximum power condition. Selection of flat and V belts- length & cross section from manufacturers' catalogues. Construction and application of timing belts.

Wire ropes: Construction of wire ropes, stresses in wire ropes, and selection of wire ropes.

MODULE 2

Gear drives: Classification of gears, materials for gears, standard systems of gear tooth, lubrication of gears, and gear tooth failure modes.

Spur Gears: Definitions, stresses in gear tooth: Lewis equation and form factor, design for strength, dynamic load and wear.

Helical Gears: Definitions, transverse and normal module, formative number of teeth, design based on strength, dynamic load and wear.

MODULE 3

Bevel Gears: Definitions, formative number of teeth, design based on strength, dynamic load and wear.

Worm Gears: Definitions, types of worm and worm gears, and materials for worm and worm wheel. Design based on strength, dynamic, wear loads and efficiency of worm gear drives.

MODULE 4

Design of Clutches: Necessity of a clutch in an automobile, types of clutch, friction materials and its properties. Design of single plate, multi-plate and cone clutches based on uniform pressure and uniform wear theories.

Design of Brakes: Different types of brakes, Concept of self-energizing and self-locking of brakes. Practical examples, Design of band brakes, block brakes and internal expanding brakes.

MODULE 5

Lubrication and Bearings: Lubricants and their properties, bearing materials and properties, mechanisms of lubrication, hydrodynamic lubrication, pressure development in oil film, bearing modulus, coefficient of friction, minimum oil film thickness, heat generated, and heat dissipated. Numerical examples on hydrodynamic journal and thrust bearing design.

Antifriction bearings: Types of rolling contact bearings and their applications, static and dynamic load carrying capacities, equivalent bearing load, load life relationship; selection of deep groove ball bearings from the manufacturers' catalogue; selection of bearings subjected to cyclic loads and speeds. Probability of survival.

DESIGN OF MACHINE ELEMENTS II (DME II)

Sub Code: 17ME64

6th Semester

MODULE I

Curved Beams: Stresses in curved beams of standard cross sections used in crane hook, punching presses & clamps, closed rings and links.

Cylinders & Cylinder Heads: Review of Lame's equations; compound cylinders, stresses due to different types of fit on cylinders; cylinder heads and flats.

MODULE 2

Belts: Materials of construction of flat and V belts, power rating of belts, concept of slip and creep, initial tension, effect of centrifugal tension, maximum power condition.

Selection of flat and V belts-length & cross section from manufacturers' catalogues. Construction and application of timing belts.

Wire ropes: Construction of wire ropes, stresses in wire ropes, and selection of wire ropes. (*Only theoretical treatment*)

Chain drive: Types of power transmission chains, modes of failure for chain, and lubrication of chains. (*Only theoretical treatment*)

Springs: Types of springs, spring materials, stresses in helical coil springs of circular and non-circular cross sections. Tension and compression springs, concentric springs; springs under fluctuating loads. Leaf Springs: Stresses in leaf springs, equalized stresses, and nipping of leaf springs. Introduction to torsion and Belleville springs.

MODULE 3

Gear drives: Classification of gears, materials for gears, standard systems of gear tooth, gear tooth failure modes and lubrication of gears.

Spur Gears: Definitions, stresses in gear tooth: Lewis equation and form factor, design for strength, dynamic load and wear.

Helical Gears: Definitions, transverse and normal module, formative number of teeth, design based on strength, dynamic load and wear.

Bevel Gears: Definitions, formative number of teeth, design based on strength, dynamic load and wear.

MODULE 4

Worm Gears: Definitions, types of worm and worm gears, and materials for worm and worm wheel. Design based on strength, dynamic, wear loads and efficiency of worm gear drives.

Design of Clutches: Types of clutches and their applications, single plate and multi-plate clutches. (Numerical examples only on single and multi-plate clutches)

Design of Brakes: Types of Brakes, Block and Band brakes, self locking of brakes, and heat generation in brakes.

MODULE 5

Lubrication and Bearings: Lubricants and their properties, bearing materials and properties; mechanisms of lubrication, hydrodynamic lubrication, pressure development in oil film, bearing modulus, coefficient of friction, minimum oil film thickness, heat generated, and heat dissipated. Numerical examples on hydrodynamic journal and thrust bearing design.

Anti friction bearings: Types of rolling contact bearings and their applications, static and dynamic load carrying capacities, equivalent bearing load, load life relationship; selection of deep groove ball bearings from the manufacturers' catalogue; selection of bearings subjected to cyclic loads and speeds; probability of survival.
